a. New diagnoses include only individuals whose initial HIV diagnosis was made in Wisconsin.
b. The first cases of HIV infection in Wisconsin were diagnosed in 1982. Thus, these represent cumulative cases from 1982 through the specified date.
c. Prevalent cases include all cases presumed to be alive and living in Wisconsin, regardless of the state of initial HIV report.
d. The average annual cases in the specified period.
e. Cases per 100,000 population. Rates not available for risk exposure groups.
f. Breakdown not shown if total is < 5. See Technical Notes for suppression rule for race/ethnicity breakdown.
g. Disease status when first diagnosed with HIV infection, except for prevalent cases, where it is the current disease status.
h. Age when first diagnosed with HIV infection, except for prevalent cases, where it is the current age.
