

DIAGNOSES CUES FOR WI LTC FUNCTIONAL SCREEN

Updated February 7, 2011

This alphabetical list of diagnoses indicates which box screeners should check on the Diagnoses table of the LTC Functional Screen. The LTC FS table has categories A through K, with numbered rows within each category.

- ◆ Diagnoses should be confirmed, by referring to health records and/or consulting with a nurse or other health care professional.
- ◆ Do not write in a diagnosis in K-5 “Other” unless you have confirmed that it is not on this list.
- ◆ Do not guess which box on the LTC FS diagnosis table to check. For every diagnosis, the screener should:
 1. See if it is listed in the LTC FS Diagnosis Table and check relevant box on the table.
 2. If not on the LTC FS Diagnosis Table, look for it in this Diagnosis Cue Sheet. If present here, check the box on LTC FS Diagnosis Table as indicated.
 3. If the diagnosis is not listed in this Diagnosis Cue Sheet, then check the K5 “Other” box, and enter the diagnosis name in the notes section.
- ◆ A few entries in this list are informative only, for example, that LLL = left lower lobe of lung.
- ◆ A key of “0” means that that diagnosis is not included in the functional screen table and screener should ignore it; it does no useful work for purposes of LTC FS and research. Do not include it in K-5 “Other.” Example: dry skin.
