

**Codependent collateral:**

When 'Y', the following fields are not required. Once the codependent collateral indicator is N it cannot revert back to Y for that member:

age\_at\_first\_use\_primary  
education\_at\_time\_of\_admission  
employment\_status  
family\_relationship  
pregnant\_at\_time\_of\_admission  
registration\_arrests  
registration\_living\_situation  
substance\_problem\_primary  
support\_group\_attend\_at\_admin

**Brief service:**

**Purpose:** This field is only to reduce the burden of reporting data.

This field **may** be checked YES if any of the following standard program categories are the **sole** SPC to be provided in an entire episode of care:

301 SPC Court intake studies  
501 Crisis intervention  
507.50 Outpatient, emergency regular  
507.65 Medication management  
601 Outreach  
602 Information and referral  
603 Intake assessment

When 'Y', the following fields are not required because you may not have the information. Once you have the information the data should be sent on every Encounter record and the brief service indicator should be N since there isn't any reduction in reporting data. Once the brief service indicator is N it cannot revert back to Y for that member:

age\_at\_first\_use\_primary  
education\_at\_time\_of\_admission  
employment\_status  
family\_relationship  
pregnant\_at\_time\_of\_admission  
registration\_arrests  
registration\_living\_situation  
substance\_problem\_primary  
support\_group\_attend\_at\_admin
