H1N1 Vaccine Distribution Update

The Department of Health Services (DHS) is providing an update on the amount of H1N1 vaccine allocated to Wisconsin from the U.S. Centers for Disease Control and Prevention (CDC). The CDC allocates, or assigns, the amount of H1N1 vaccine each state will receive each week.

The CDC has established a vaccine distribution system where H1N1 vaccine orders are placed through each state's public health department. DHS has established the ability for public and private health care providers to place their orders with the state, DHS places their order with the CDC, and the vaccine distributor ships vaccine directly to providers.

DHS places orders with the CDC for more than 2,000 public and private health care providers based on the state's assigned allotment. DHS placed the first H1N1 vaccine order on September 30th and Wisconsin received initial shipments in early October. There is a lag time between the state receiving its allocation and the shipment of doses to the providers.

Since the vaccine production has been slower than expected, the allotments have fluctuated significantly. Currently, Wisconsin has been allotted a total of 497,700 doses of H1N1 vaccine and approximately 350,000 have arrived in the state. DHS estimates that the vast majority of the doses that have arrived have already been distributed to individuals within the target population groups.

Wisconsin H1N1 Vaccine Allotments in October

Date	Daily Doses Allocated to WI	Total Doses Allocated to WI
September 30, 2009	30,200	30,200
October 1, 2009	0	30,200
October 2, 2009	16,200	46,400
October 5, 2009	0	46,400
October 6, 2009	54,300	100,700
October 7, 2009	3,300	104,000
October 8, 2009	22,100	126,100
October 9, 2009	20,900	147,000
October 12, 2009	46,700	193,700
October 13, 2009	19,500	213,200
October 14, 2009	0	213,200
October 15, 2009	0	213,200
October 16, 2009	28,300	241,500

- MORE -

October 19, 2009	4,300	245,800
October 20, 2009	0	245,800
October 21, 2009	0	245,800
October 22, 2009	40,200	286,000
October 23, 2009	6,500	292,500
October 26, 2009	85,400	377,900
October 27, 2009	29,200	407,100
October 28, 2009	16,400	423,500
October 29, 2009	60,400	483,900
October 30, 2009	13,800	497,700

Due to limited vaccine, DHS is recommending that local health departments and health professionals target H1N1 vaccine for those individuals most-at-risk during the next several weeks as the vaccine supply continues to fluctuate. DHS recommends that public and private providers focus vaccination efforts on the following subset of CDC's target groups:

- Pregnant women
- Persons who live with or provide care for infants age 6 months or younger (examples: parents, siblings, daycare providers)
- Health care and emergency medical services personnel who have direct contact with patients or infectious material
- Children age 6 months - 4 years
- Children and adolescents age 5-18 years who have chronic medical conditions that put them at higher risk for influenza-related complications

Community vaccination clinics will resume as H1N1 vaccine becomes more readily available. People may call 2-1-1 to find out an H1N1 or seasonal influenza vaccine clinic nearest them. A "clinic finder" is also available online at <http://pandemic.wisconsin.gov> or www.wisconsinfluclinic.info.
