LTCare Encounter Datamart Universe: New Provider Grouping Objects

New objects have been added to the LTCare Encounter Datamart and are available now. These new objects are in the following locations:

- Encounter Detail > Encounter Providers > Encounter Header Provider > Encounter Header Provider Group
- Encounter Detail > Encounter Providers > Encounter Detail Provider > Encounter Detail Provider Group
- Encounter Submission > Encounter Submission Submitting Provider > Encounter Submitting Provider Group

Purpose

The purpose of the new objects is to group providers by the Provider Group ID object. Multiple Provider Group Sub IDs are associated with a single Group ID. The Group Sub ID object values represent the ID associated with the provider across multiple DSS Universes. For example, the MCO ID or the Assigned Provider ID. Excluding the two ID objects, the remainder of the new naming objects describe the provider represented by the Group ID.

Process

The values returned by these objects are owned by the business entity named in the Program Source object. This entity identifies the correct values for each object by Provider Sub ID. When the owning entity makes a change to these values, the change is communicated to the Encounter Application Team. The Encounter Application Team adjusts the appropriate Encounter Application table. The DSS/DW loads the most recent values from this table upon load. History is not maintained in the source application or in the Encounter Datamart Universe.

Values Not Reported (??-VNR)

The new objects are available for Encounter Submitting Provider, Encounter Header Provider, and Encounter Detail Provider only. The table used to associate Provider Group ID and Provider Group Sub ID is not inclusive of all possible providers of these types. In other words, only certain providers are returned in the object values. As of this release, these include organizations providing the Family Care, Family Care Partnership, and Program of All Inclusive Care for the Elderly (PACE). All other Provider IDs will return '??-VNR'. Keep this in mind when running queries that include records from multiple programs.

Technical Details

The values associated with the objects discussed in this release are not tied to encounter record submissions and are to be used for reporting purposes only. If any object class containing these objects is
