

ENC DM_1.22.0.0 Release Notes

Encounter Data Mart Universe

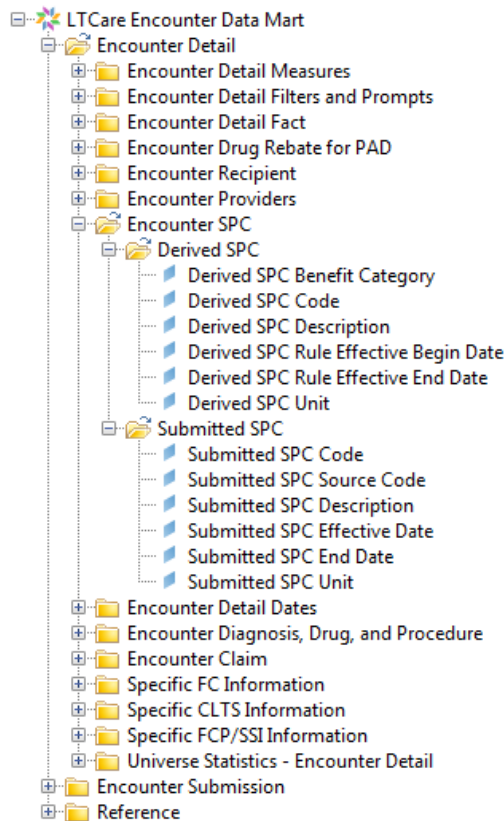

Purpose/Background

Derived Service Program Category objects have been added to the LTCare Encounter Data Mart. These objects have been added to consistently evaluate the submitted data and derive an SPC code value. Derived SPC codes are assigned to individual encounter records based on Service Grouping Rules. The Service Grouping Rules that “derive” the appropriate SPC code to be assigned to a record can be found in the Reference folder in the universe. Derived SPC codes have been assigned to encounter CLTS and Family Care records. Derived SPC codes will be made available on PACE/Partnership and IRIS encounter records between late March and April 2016.

Submitted SPC objects are also now available in the LTCare Encounter Data Mart. The Submitted SPC Code is the code that was submitted with the encounter. Submitted SPC Codes are no longer considered program specific and can be accessed by any user.

New Folders

The Derived SPC and Submitted SPC objects are located in the Encounter SPC folder. There are also Service Grouping Rules in the Reference folder.
