

Release Notes 1.23.0.0

Functional Screen Provider Source Change

Within each Functional Screen universe (Adult, Child, Personal Care and Mental Health) there are three providers, the Assigned to Agency, the Eligibility Agency and the Screening Agency.

All three of these are being associated with a new provider table called “dim_provider_src” which works to accurately reflect these provider names exactly as they appear in the source application. Previously some slight capitalization changes existed between the source and application.

Source:	Specific County MCO
Previous Warehouse:	Specific County Mco
Warehouse after update:	Specific County MCO

For Business Objects Web Users (95%+ of users) there is minimal or no impact:

The change will be transparent and no changes are needed to your report. If you have filters or conditions in your query specifically on provider names you should do a quick check to make sure the name is still restricting as you desire. Restrictions on IDs will not be impacted and security and record access will remain identical.

For Business Objects Freehand Users, Processes, Data Extracts you can use either table join and have no impact:

Old joins to the existing dim_provider table will be maintained and you will see the data exactly as you did previously. If you’d like to use the new table you can modify your objects and joins to use the new _src SK.
