Release Notes 1.20.0.0

LTCare Child Functional Screen Universe – IADL Communication / Learning Assessment Information and Screener Email Address Objects Added

The LTCare Child Functional Screen Datamart has been updated to include new sub-folders and objects within the Child IADL Communication folder, new objects within the Learning Assessment Information folder, and a new Screener Email Address object found within the Child Screener Information folder.

The new sub-folders within the Child IADL Communication folder are Expressive Communication Assessment Information and Receptive Communication Assessment Information. These two new folders and the Learning Assessment Information folder will include new objects pertaining to Delay Percentage Code, Delay Percentage Description, Result Code, Result Description, SD Code, and SD Description ("SD" is Standard Deviation). In addition, the Learning Assessment Information folder will also include the newly added IQ Score, IQ Test Code, and IQ Test Description objects.
