Child Functional Screen – New Field Additions and Removals

Summary

The LTCare Child Functional Screen Datamart Universe now has added additional elements to accurately reflect changes in the FSIA screening tool. These are standard additions and the purpose of this document is to make you aware of what is now available, how it functions and any special considerations.

New Objects

New Question in Mental Health / Substance Abuse

This flag indicates if “the child applicant requires more than outpatient counseling to address his / her mental health or substance use disorder”. Prior to this question being available screens will have a value of ‘U’ for unknown.

New Diagnosis Flags

Three additional Diagnosis Flags have been added, Social Communication Disorder Flag, Social Functional Disorder Flag and Trauma Related Disorder Flag. Values for screens prior to this addition will reflect ‘N’. New screens with these conditions selected will reflect a value of ‘Y’.

Screen Information CLTS MWS Flag no longer used.

New values for CLTS Medicaid Waiver Services Flag will be ‘U’. The object is still available for historical purposes and existing reports but will no longer be recorded in the application.

Additional Referral Sources and Diagnostic Test Options added.

These existing objects now have new values. No new objects have been added to the Universe.
