

Release Notes 1.19.0.0

Functional Screen Social Security Number Verification

The LTCare Functional Screen Universes have been updated to include a new object displaying the Social Security Number Verification Status code and associated description.

Location of Objects

Functionality of the new objects:

These objects can be changed after a screening, unlike most other Functional Screen data which is only recorded when it is initially entered. The latest information will be updated as part of the standard weekly LTC data warehouse load. This matches the SSN verification code found within FSIA.

Some sample values are listed below. A value of 'NR' or 'Value Unknown / Not Reported' indicates that no code was recorded for the specific screen.

Code	Description
V	Verified SSN
P	Last Name matches, Birth Date does not
C	Unverified SSN
5	Name mismatch, Birth Date and SSN match
