## Wisconsin DHS Data Warehouse ICD-10 Update

### Purpose/Background

The ICD-9-CM code set is being retired and replaced with ICD-10-CM and ICD-10-PCS. For services after Oct 1<sup>st</sup> 2015, ICD-9 codes will no longer be accepted on most claims and encounter submissions. Not every series of codes will be updated with a new code set.

Source systems should be updated to accept the new codes but not every system and code set will be updated. See below for reference:

### Code Sets

Current Code Set	New Code Set	
ICD-9-CM (Diagnosis)	ICD-10-CM	Diagnosis codes are updated in all systems
ICD-9-CM (Procedure)	ICD-10-PCS	Procedure codes (inpatient surgical procedure codes in Encounter)
HCPCS	Unchanged	HCPCS codes are unchanged
CPT Procedure	Unchanged	CPT Procedure codes are unchanged
Modifiers	Unchanged	Modifier codes are unchanged
Derived Groupers	Unchanged	Groupers may be updated if they use updated code sets in their determinations.

### Data Elements

ICD version indicator objects have been added to universes where a diagnosis or surgical procedure code is present. These objects display a simple '9' or '10' value indicating which version of the code is being used. All code objects with multiple versions will have this indicator added.

In addition, other universe objects have been updated to account for the recent ICD-10 updates such as the Diagnosis Display Code objects.

### Reporting Impact

Reports with hard-coded ICD-9 code values will need to be updated to include ICD-10 codes or patterns needed. All existing codes and assignments will still be present and be valid for old records as well as new updates/reversals of records with dates prior to the October 1, 2015 cut-over. Users need to be aware that their reports will potentially need modifications.

In the LTCare Adult Personal Care Functional Screen Data Mart, the three ICD Diagnosis Codes now use

version indicators. It would be extremely unlikely that all are populated but ICD-10 codes will be the standard moving forward.
