EMTrack and Patient Tracking in Wisconsin

Hospital and Health Care Systems Coordinator
May 12, 2023

What is EMTrack?

- Mechanism to electronically trace the movement of the patient from initial encounter through the health care system
- Provides real-time situational awareness between incident commanders, field responders, and health care organizations by automatically updating transport information through the scene of an incident
- Follows incident command system triage, treatment and
- transport

Incident Command System

[https://www.ncbi.nlm.nih.gov/books/NBK534800/figure/article 31672.image.f1/?report=objectonly](https://www.ncbi.nlm.nih.gov/books/NBK534800/figure/article%2031672.image.f1/?report=objectonly)

EMTrack Basics

- Software (Juvare) licensed by WI DHS, no special equipment
- Web-based or mobile app (Android or iOS smart devices)
- If network (internet or cellular data) is not available, entered data is queued and uploaded when network becomes available
- Secure and HIPAA compliant handling of data
- Functionality is role-based
- Serves as a centralized repository of patient tracking information

Scope of Use

- Mass casualty incidents (MCI)
- Planned events with large public gatherings
- Health care facility evacuation
- Reunification
- Daily emergency medical service (EMS) runs

Who Uses EMTrack?

- Emergency medical services (EMS)
- Hospitals
- Public health
- Incident commanders
- Dispatch

What Data is Collected

- Protected health information (PHI) of patients involved in scene
- Triage category
- Patient transport information

How is Data Used?

- Incident management
- Incoming patient notifications for hospitals
- Family reunification
- Situation reports
- After action reports

Mobile Application

- Uses forms to collect encrypted information
- Maintains capabilities while offline
- Scans driver's license to automatically pull demographics into forms
- Pulls value forward on each form by clicking the pad lock
- Creates a unique patient ID
 - Scanning triage tags, wrist bands, and toe tags
 - Daily tracking via system-generated ID

Mobile App Functionality

- Forms: Use incident forms for tracking
- Messages: Communicate with staff online
- Transports: Track patients in transport
- Incidents: Monitor ongoing incidents
- Slight variation between iOS and Android devices
 - iOS menu button is in the bottom ribbon

- Android menu is in the top ribbon

Mobile App Daily Tracking

- Select *Start Run*
- Select *WI Daily Tracking*
 - System generated unique ID Enter patient information
- Select *Upload* to end the run and confirm if the patient was delivered

WI Daily Tracking

Confirm

Are you sure you want to end the patient run?

Patient Delivered

CANCEL END RUN

End Run?

YES - Patient Delivered

YES - Patient Not Delivered

Cancel

Web Functionality

- Dashboards
- Filters
- Coordination with patients and clients
- Incident management (MCI, evacuation, public event)
- Report repository
- Property
- Locate
- Transports
- Messages

The screenshot displays the top navigation bar of the JUVARE web application. On the left, it shows the user's name 'Katherine Johnson', the state 'Wisconsin', and a 'Profile' link. A 'Log Out' button is also present. A search bar with a magnifying glass icon is located on the right. The JUVARE logo is in the top right corner. Below the navigation bar, a secondary menu contains links for 'Dashboard', 'Filters', 'Patient', 'Incidents', 'Reports', 'Property', 'Locate', 'Transports', and 'Messages'. The 'Dashboard' link is highlighted. To the right of this menu are links for 'System Settings', 'Help', and 'Contact'. At the bottom of the interface, there is a 'Current Dashboard:' section with a dropdown menu set to 'WI Hospital View' and an 'Incident Mode' button. On the far right, there are 'Save' and 'Configure' buttons.
