Wisconsin state law requires licensed child care centers to yearly report the immunizations of children aged two to four years. The report is called the Immunization Child Care Assessment.

What are immunizations?
- Immunizations, also called vaccines or shots, protect children and adults from dangerous diseases.
- The shot helps your body to build up and protect you from the real disease.

What is the Immunization Child Care Assessment?
- The Immunization Child Care Assessment is a state-required report for all licensed child care centers.
- The report helps the state and local health departments understand the health of children in Wisconsin.
- Child care centers report how many children aged 2-4 years in the center:
  - Are fully vaccinated, which means they have all of the vaccines and doses needed for their age.
  - Have a personal or religious waiver, which means they have a signed waiver stating they have a personal or religious reason for not getting a vaccine.
  - Have a medical waiver, which means they have a signed waiver from their doctor that says they cannot receive a vaccine for health reasons.

Why do I need to complete the assessment?
- Wisconsin law requires child care centers to submit the assessment report yearly.
- The goal is to make sure children in child care centers are protected from disease.

Where can a parent find their child’s vaccine record?
A parent or guardian can call their child’s doctor or look up the record in the Wisconsin Immunization Registry at [https://www.dhfswir.org/PR/portallInfoManager.do](https://www.dhfswir.org/PR/portallInfoManager.do).
What is the Child Care Assessment booklet?

- The booklet explains the law and how it applies to child care centers.
- It includes all the forms, links, and directions to help centers meet the law’s reporting requirements.
  - It includes a worksheet of the assessment, and the link to the online assessment.
  - Remember, only the online assessment is required to be turned in.
- The Child Care Assessment booklet will be sent to you at the start of each year.

How do I complete the assessment?

1. Collect all current immunization records for both part-time and full-time children aged 2-4 years.
2. Use the Immunization Assessment form as a worksheet. You can find the Immunization Assessment form in the booklet.
3. Use the information from the Immunization Assessment form to finish the online assessment.

I am confused about completing the report, is there someone I can contact?

Many people have questions about completing the assessment, even those who have completed it in the past. Your local health department can assist you with any questions about the report. For local health department information visit [https://www.dhs.wisconsin.gov/lh-depts/counties.htm](https://www.dhs.wisconsin.gov/lh-depts/counties.htm).

What is done with the information collected from the assessment?

- The information is summarized and shared on the Wisconsin Immunization Program website.
- The assessment provides immunization information required by Wisconsin law to the health department.

How is the individual child’s identity protected?

- The report does not collect any identifying information about children.
- The report only collects information on the types and total number of vaccines all the children in the center have or are missing.

The child care must keep all children’s records up-to-date. Review your records on a yearly basis to make sure you have current information.
CHILD CARE ENTRY: WHAT VACCINES ARE REQUIRED?

The number and type of shots (vaccines) that a child needs is based on their age. If a child misses a dose for an age group, they must go to their doctor to make up the shot.

= One shot (a dose of vaccine) in the pictures below

5 - 15 months

- PCV
- Polio
- Hib
- DTP/DTaP
- Hep B

16 - 23 months

- Hib *
- PCV **
- DTP/DTaP/DT
- MMR***

Plus any vaccines the child may have missed at 5-15 months

2 - 4 years

- Polio
- Varicella
- DTP/DTaP/DT***
- Hep B

Plus any vaccines the child may have missed at 5-23 months

Kindergarten age

- Polio
- MMR
- Varicella

Plus any vaccines the child may have missed before 4 years of age

See next page for footnotes and definitions
Here are some special notes, or footnotes, about a few of the vaccines.
