4. Possible side effects, warnings, and cautions associated with this medication are listed below. This is not an all-inclusive list but is representative of items of potential clinical significance to you. For more information on this medication, you may consult further with your physician or refer to a standard text, such as the PDR. As part of monitoring some of these potential side effects, your physician may order laboratory or other tests. The treatment team will closely monitor individuals who are unable to readily communicate side effects in order to enhance care and treatment.

Continued – Possible side effects, warnings, and cautions associated with this medication.

Most Common Side Effects: Diarrhea, xerostomia, drowsiness, tiredness

Less Common Side Effects: insomnia, nasopharyngitis, suicidal thoughts, contusion, constipation, agitation, depression, urinary tract infection

Rare Side Effects: prolonged QT interval

Caution

Endocrine and metabolic

Hyperprolactinemia has occurred with tetrabenazine.

Neurologic

Side effects such as worsening in mood, cognition, rigidity, functional capacity may be difficult to distinguish from disease progression in patients with Huntington disease. Akathisia, agitation, and restlessness have occurred in patients with Huntington disease and tardive dyskinesia. Parkinsonism, difficult to distinguish from disease progression, may occur in patients with Huntington disease and has been reported in patients with tardive dyskinesia; usually occurred within the first 2 weeks of initiation or dosage increases.

Ophthalmic

Drug and metabolites bind to melanin-containing tissue; long-term ophthalmologic effects cannot be ruled out.

Warning:

Black Box Warning: Oral (Extended Release and Immediate Release tablets)

Depression and Suicidality in Patients with Huntington's Disease: This medication can increase the risk of depression and suicidal thoughts and behavior (suicidality) in patients with Huntington disease. Anyone considering the use of deutetrabenazine extended release tablets or deutetrabenazine tablets must balance the risks of depression and suicidality with the clinical need for treatment of chorea. Closely monitor for the emergence or worsening of depression, suicidality, or unusual changes in behavior. Report behaviors of concern promptly to the treating physician. Deutetrabenazine extended release tablets and deutetrabenazine tablets are contraindicated in patients who are suicidal, and in patients with untreated or inadequately treated depression.

2

Syndrome Note: Neuroleptic malignant syndrome has occurred with tetrabenazine

See standard reference text for an all-inclusive list of side effects.

Client Initial	Date	

By my signature below, I GIVE consent for the named medication on Page 1 and anticipated dosage range. My signature also indicates that I understand the following:

- 1. I can refuse to give consent or can withdraw my consent at any time with written notification to the institution director or designee. This will not affect my right to change my decision at a later date. If I withdraw consent after a medication is started, I realize that the medication may not be discontinued immediately. Rather, it will be tapered as rapidly as medically safe and then discontinued so as to prevent an adverse medical consequence, such as seizures, due to rapid medication withdrawal.
- 2. Questions regarding this medication can be discussed with the Interdisciplinary Team, including the physician. The staff contact person can assist in making any necessary arrangements.
- 3. Questions regarding any behavior support plan or behavior intervention plan, which correspond with the use of the medication, can be directed to the client's social worker, case manager, or psychologist.
- 4. I have the right to request a review at any time of my record, pursuant to § 51.30(4)(d) or § 51.30(5)(b).
- 5. I have a legal right to file a complaint if I feel that client rights have been inappropriately restricted. The client's social worker, case manager, or agency/facility client rights specialist may be contacted for assistance.
- 6. My consent permits the dose to be changed within the anticipated dosage range without signing another consent.
- 7. I understand the reasons for the use of the medication, its potential risks and benefits, other alternative treatment(s), and the probable consequences that may occur if the proposed medication is not given. I have been given adequate time to study the information and find the information to be specific, accurate, and complete.
- 8. This medication consent is for a period effective immediately and not to exceed fifteen (15) months from the date of my signature. The need for and continued use of this medication will be reviewed at least quarterly by the Interdisciplinary Team. The goal, on behalf of the client, will be to arrive at and maintain the client at the minimum effective dose.
