☐ Intervention of law enforcement authorities
☐ Risk of harm to self or others

Other Consequences:

Note: These consequences may vary depending upon whether or not the individual is in an inpatient setting. It is also possible that in unusual situations, little or no adverse consequences may occur if the medications are not administered.

Client Initial _____ Date _____

4. Possible side effects, warnings, and cautions associated with this medication are listed below. This is not an all-inclusive list but is representative of items of potential clinical significance to you. For more information on this medication, you may consult further with your physician or refer to a standard text, such as the PDR. As part of monitoring some of these potential side effects, your physician may order laboratory or other tests. The treatment team will closely monitor individuals who are unable to readily communicate side effects in order to enhance care and treatment.

Continued – Possible side effects, warnings, and cautions associated with this medication.

Most Common Side Effects: Dizziness, drowsiness, headache, lack of energy (fatigue), low blood pressure

Less Common Side Effects: Swelling, nausea, somnolence, vertigo, orthostatic hypotension, palpitations, asthenia, anxiety, polyuria, dyspnea, respiratory tract infection

Rare Side Effects: Myocardial infarction, hepatitis, intraoperative floppy iris syndrome (IFIS), priapism, angioedema, rash, abdominal pain, cerebrovascular accident, blurred vision

Caution

Precautions:

- **Cardiovascular**
  Postural hypotension and syncope may occur, typically within a few hours after dosing, but may occur later, and most commonly occurs with initial dosing or dose increases; effects may be increased if used with a PDE5 inhibitor. Use with caution in patients with heart failure, angina pectoris, or recent acute myocardial infarction (within the last 6 months).
- **Gastrointestinal**
  Use extended-release tablets with caution in patients with preexisting severe gastrointestinal narrowing; obstructive symptoms have been reported. Extended-release tablets in patients with prolonged gastrointestinal transit times (example chronic constipation) may lead to increased drug exposure and adverse effects.
- **Hematologic**
  Reversible leukopenia and neutropenia have been reported.
- **Hepatic**
  Inform your doctor if you have severe hepatic impairment.
- **Reproductive**
  Prostate carcinoma may mimic symptoms of benign prostatic hyperplasia; prostate cancer screening is recommended prior to initiating therapy for benign prostatic hyperplasia. Priapism may occur, which may lead to permanent impotence.
- **Beers Criteria**
  Avoid use as an antihypertensive in older adults this medication can have a high risk of orthostatic hypotension. Avoid use in women with stress or mixed urinary incontinence as it may aggravate incontinence.

Warning

Syndrome Note Intraoperative floppy iris syndrome: If you plan on undergoing cataract surgery, talk to your doctor about this medication.

See standard reference text for an all-inclusive list of side effects.

Client Initial _____ Date _____

Medication: Cardura®, Cardura XL® – (doxazosin mesylate)

By my signature below, I GIVE consent for the named medication on Page 1 and anticipated dosage range. My signature also indicates that I understand the following:

1. I can refuse to give consent or can withdraw my consent at any time with written notification to the institution director or designee. This will not affect my right to change my decision at a later date. If I withdraw consent after a medication is started, I realize that the medication may not be discontinued immediately. Rather, it will be tapered as rapidly as medically safe and then discontinued so as to prevent an adverse medical consequence, such as seizures, due to rapid medication withdrawal.
2. Questions regarding this medication can be discussed with the Interdisciplinary Team, including the physician. The staff contact person can assist in making any necessary arrangements.
3. Questions regarding any behavior support plan or behavior intervention plan, which correspond with the use of the medication, can be directed to the client's social worker, case manager, or psychologist.
4. I have the right to request a review at any time of my record, pursuant to § 51.30(4)(d) or § 51.30(5)(b).
5. I have a legal right to file a complaint if I feel that client rights have been inappropriately restricted. The client's social worker, case manager, or agency/facility client rights specialist may be contacted for assistance.
6. My consent permits the dose to be changed within the **anticipated dosage range** without signing another consent.
7. I understand the reasons for the use of the medication, its potential risks and benefits, other alternative treatment(s), and the probable consequences that may occur if the proposed medication is not given. I have been given adequate time to study the information and find the information to be specific, accurate, and complete.
8. This medication consent is for a period effective immediately and not to exceed fifteen (15) months from the date of my signature. The need for and continued use of this medication will be reviewed at least quarterly by the Interdisciplinary Team. The goal, on behalf of the client, will be to arrive at and maintain the client at the minimum effective dose.
