4. Possible side effects, warnings, and cautions associated with this medication are listed below. This is not an all-inclusive list but is representative of items of potential clinical significance to you. For more information on this medication, you may consult further with your physician or refer to a standard text, such as the PDR. As part of monitoring some of these potential side effects, your physician may order laboratory or other tests. The treatment team will closely monitor individuals who are unable to readily communicate side effects in order to enhance care and treatment.

Continued – Possible side effects, warnings, and cautions associated with this medication.

Most Common Side Effects

The most common side effects include increased appetite, weight gain, abdominal discomfort, diarrhea, nausea, vomiting, xerostomia, somnolence, urinary retention, thick bronchial sputum.

Less Common Side Effects

Less common side effects include hepatitis, jaundice, agranulocytosis, hemolytic anemia, leukopenia, thrombocytopenia,

Rare Side Effects

Cyproheptadine is a Beers List drug that should be avoided in elderly, debilitated patients due to its strong anticholinergic effects (for example, dizziness, sedation, hypotension) and reduced clearance. In particular, avoid in patients with delirium or those at high risk of delirium, as it may induce or worsen delirium in patients with dementia and cognitive impairment due to adverse CNS effects. Avoid use in men with lower urinary tract symptoms or benign prostatic hyperplasia due to decreased urinary flow and retention. It should also be avoided in patients with angle-closure glaucoma, bladder neck obstruction, hypersensitivity to cyproheptadine and other drugs of similar chemical structure, current MAO-I therapy, newborn or premature infants, nursing mothers, pyloroduodenal obstruction, stenosing peptic ulcer.

Cyproheptadine should be used with caution in patients with cardiovascular disease, hypertension, hyperthyroidism, increased intraocular pressure and those with a history of bronchial asthma due to its anticholinergic effects.

See standard reference text for an all-inclusive list of side effects.

By my signature below, I GIVE consent for the named medication on Page 1 and anticipated dosage range. My signature also indicates that I understand the following:

- I can refuse to give consent or can withdraw my consent at any time with written notification to the institution director or designee. This will not affect my right to change my decision at a later date. If I withdraw consent after a medication is started, I realize that the medication may not be discontinued immediately. Rather, it will be tapered as rapidly as medically safe and then discontinued so as to prevent an adverse medical consequence, such as seizures, due to rapid medication withdrawal.
- Questions regarding this medication can be discussed with the Interdisciplinary Team, including the physician. The staff contact person can assist in making any necessary arrangements.
- Questions regarding any behavior support plan or behavior intervention plan, which correspond with the use of the medication, can be directed to the client's social worker, case manager, or psychologist.
- I have the right to request a review at any time of my record, pursuant to § 51.30(4)(d) or § 51.30(5)(b).
- I have a legal right to file a complaint if I feel that client rights have been inappropriately restricted. The client's social worker, case manager, or agency/facility client rights specialist may be contacted for assistance.
- My consent permits the dose to be changed within the anticipated dosage range without signing another consent.
- I understand the reasons for the use of the medication, its potential risks and benefits, other alternative treatment(s), and the probable consequences that may occur if the proposed medication is not given. I have been given adequate time to study the information and find the information to be specific, accurate, and complete.
- This medication consent is for a period effective immediately and not to exceed fifteen (15) months from the date of my signature. The

need for and continued use of this medication will be reviewed at least quarter client, will be to arrive at and maintain the client at the minimum effective dos	erly by the Interdisciplinary Te	, ,
