C	Context	F	Data Source for Measurement		

1.

- A. School-Based Fluoride Mouthrinse Program: During the 2016-17 school year, (insert number) children in first grade and above from non-fluoridated communities will participate in a weekly school-based fluoride mouthrinse program administered by the (insert name) Health Department during the 2016-2017 school year.
- B. A report to document total enrollment per grade, total number of children participating per grade, and names of schools participating in a school-based fluoride mouthrinse program administered by the (insert name) Health Department during the 2016-2017 school year.
- C. A school-based fluoride mouthrinse program is an evidence-based prevention strategy that prevents dental caries (cavities). The children targeted by this objective must be in first grade or above. School-based fluoride mouthrinse programs are not indicated in fluoridated communities or where the natural fluoride level is at an appropriate level. Programs should follow the guidelines for implementation, training, record keeping, and safety outlined in the [School Based Fluoride Mouthrinse Manual: A Guide and Training Manual for Mouthrinse Coordinators, Administrators, Teachers, and Volunteers](#). See the Wisconsin Oral Health Program Fluoride Mouthrinse Program Boundary Statement for details on the target population and acceptable use of funds.
- D.
- E.
- F. 1. Wisconsin Oral Health Program (OHP) Fluoride Mouthrinse Program Annual Report must be completed and submitted to the OHP. The report will document total enrollment per grade, total number of children participating per grade, and names of schools participating during the 2016-2017 school year.
- G. Technical assistance is available through the Department of Health Services Wisconsin Oral Health Program. Contact Robbyn Kuester, BSDH, RDH at (608) 266-0876 or Robbyn.Kuester@wisconsin.gov.
