## COVID-19 Vaccines for Wisconsin residents

Updated: 2/21/2022

### HERC region data

- Total population who have received at least one dose
- Total population who have completed the series

Percent of Wisconsin residents who have received at least one dose by county

Click a county to filter data

Percent of Wisconsin residents who have received at least one dose

The orange represents the population for whom the vaccine is authorized.  
The gray indicates the population under 5 years of age for whom the vaccines are not authorized.

### Age

### Sex

\*0.4% of records were reported without sex.

### Race

\*6.5% of records reported a race of "Other"

\*3.8% of records reported an unknown race

### Ethnicity

\*3.7% of records were reported without ethnicity.

# Vaccination Data Update

# Vaccination update

- CDC updated recommendation for COVID-19 vaccination and booster schedule for immunocompromised individuals.
- The vaccination schedule depends on the age and the type of vaccine received.

Primary Series COVID-19 Vaccine	Age Group	Number of Doses to Complete Primary Series and Timing	Booster and Timing
Pfizer-BioNTech	5–11 years	3 doses 2 <sup>nd</sup> dose given 3 weeks (21 days) after 1 <sup>st</sup> dose 3 <sup>rd</sup> dose given at least 4 weeks (28 days) after 2 <sup>nd</sup> dose	Not recommended

Primary Series COVID-19 Vaccine	Age Group	Number of Doses to Complete Primary Series and Timing	Booster and Timing
Pfizer-BioNTech	12+ years	3 doses 2 <sup>nd</sup> dose given 3 weeks (21 days) after 1 <sup>st</sup> dose  3 <sup>rd</sup> dose given at least 4 weeks (28 days) after 2 <sup>nd</sup> dose	1 booster Given at least 3 months after 3 <sup>rd</sup> dose
Moderna	18+ years	3 doses 2 <sup>nd</sup> dose given 4 weeks (28 days) after 1 <sup>st</sup> dose 3 <sup>rd</sup> dose given at least 4 weeks (28 days) after 2 <sup>nd</sup> dose	1 booster Given at least 3 months after 3 <sup>rd</sup> dose

Primary Series COVID-19 Vaccine	Age Group	Number of Doses to Complete Primary Series and Timing	Booster and Timing
J&J/Janssen	18+ years	2 doses 1 <sup>st</sup> dose J&J/Janssen 2 <sup>nd</sup> dose Pfizer-BioNTech or Moderna (mRNA COVID-19 vaccines) given at least 4 weeks (28 days) after 1 <sup>st</sup> dose	1 booster Either Pfizer-BioNTech or Moderna (mRNA COVID-19 vaccines) in most situations given at least 2 months after 2 <sup>nd</sup> dose

# Vaccination Updates

- DHS has developed a handout regarding COVID-19 vaccines for children

COVID-19 Vaccine

---

## For Children Ages 5 and Older: WHAT PARENTS AND GUARDIANS SHOULD KNOW

**Which vaccine can my child get?**

The **Pfizer COVID-19 vaccine** is the only vaccine authorized for children 5 to 18 years old. The Moderna and Johnson & Johnson vaccines are only authorized for use in adults ages 18 and older. The Pfizer vaccine for children ages 5 to 11 has the **same active ingredients but is a smaller dose** compared to the Pfizer vaccine for adolescents and adults. Unlike many medications, vaccine dosages are based on the child's age on the day of vaccination and not their size or weight.

**Why should my child get vaccinated?**

- ▶ Some children can get very sick from COVID-19, and may need to be hospitalized. In rare cases, they may die. **By getting vaccinated, your child will have protection against severe illness** and reduce the chances of spreading the virus to other, possibly more vulnerable people.
- ▶ **COVID-19 vaccines provide good protection against variants**, including the Delta and Omicron variants. The more people who get vaccinated, the less chance the virus has to mutate.
- ▶ Medical experts are learning about the effects of COVID-19 in children such as multisystem inflammatory syndrome in children (MIS-C). MIS-C can cause parts of the body to become inflamed including the heart, lungs, brain, and other organs. The best thing you can do to **prevent MIS-C and protect your child against COVID-19** is to get them vaccinated. Learn more about MIS-C at [www.dhs.wi.gov/disease/mis-c.htm](https://www.dhs.wi.gov/disease/mis-c.htm).

# Testing updates

- DHS has procured iHealth Rapid antigen kits to fill supply orders for testing program participants
- The tests may not be distributed to individuals for use at home because program participants must have a CLIA Waiver and report results.
- Tests can be ordered through [Wisconsin COVID-19 Collection Supplies Request](#) web portal. The ordering process remains the same.

# Update on MIS-C

- **MIS-C (Multi-System Inflammatory Syndrome in Children) causes other parts of the body to become inflamed**
- **183 diagnosed cases in WI (33 of which have been diagnosed since 1/1/2022)**
- **One reported fatality in WI which occurred in February**
- **Best form of protection is vaccination & boosters**

# CDC Updated Guidance for Homeless Service Providers

- Continues to recommend that all staff, volunteers, and clients (regardless of vaccination status) wear a well fitting face mask or respirator and maintain social distancing
- CDC does not recommend removing protections as COVID-19 activity levels decrease due to the increased risk of transmission in this setting.
- CDC recommends taking all these factors into account when considering modifying restrictions:
  - What is the incidence of COVID-19 cases in the surrounding community?
  - What proportion of current clients and staff are up to date with vaccination against COVID-19?
  - What proportion of the people staying in your shelter are new each week?
  - What is the layout of your facility?
  - What proportion of your clients are at increased risk for severe COVID-19 illness?

# CDC UPDATED GUIDANCE FOR HOMELESS PROVIDERS

## Routine Operations

- **Staff and clients isolate/quarantine for 10 days**
- **Staff may follow general population guidance to end isolation for activities other than returning to work after 5 days**

## Crisis Operations (Staffing shortages)

- **Reduce quarantine/isolation duration for groups at lower risk of infection first (e.g. those up to date on COVID vaccines)**

# Recommendations

Promoting vaccination

Mask use

Physical distancing

Screening testing

Ventilation

Handwashing &

Staying home when sick

Contact tracing, isolation,  
quarantine

Cleaning and disinfection

**Layered  
Prevention  
Strategies**

# Recommendations

- Continue all mitigation strategies.
- Continue facility wide testing weekly.

**Community transmission is  
very high**
