

ASTHMA IN WISCONSIN

ASTHMA FACTS AND FIGURES - 2009

CHIPPEWA COUNTY ASTHMA COALITION

WHAT IS ASTHMA?

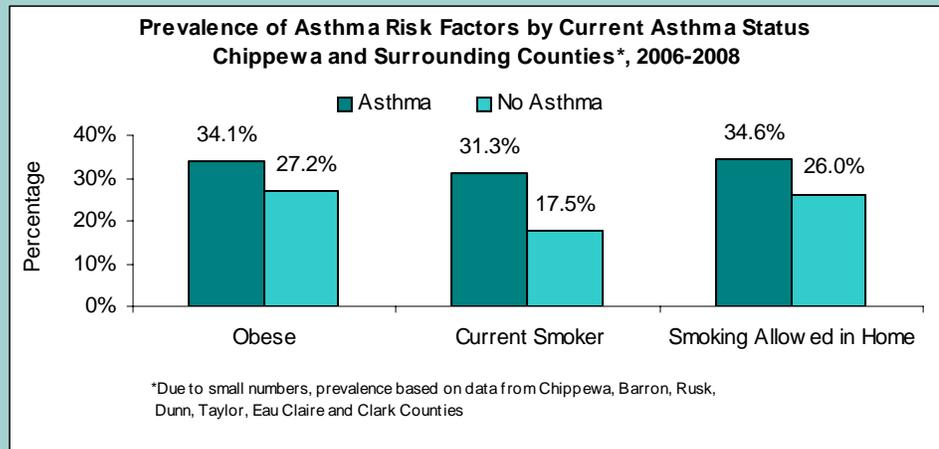

- Asthma causes the airways of the lungs to tighten and swell
- Symptoms include shortness of breath, wheezing, coughing and chest tightness
- Asthma cannot be cured, but it can be controlled
- Symptoms can range from mild to life threatening

WHAT CAUSES ASTHMA?

Asthma attacks happen when triggers make the airways to the lungs irritated and inflamed. Common triggers include:

- Environmental tobacco smoke
- Molds
- Pets
- Nitrogen Dioxide
- Work-related exposures (such as animal dander, flour, latex and certain chemicals like ammonia and chlorine)
- Dust mites
- Outdoor air pollution
- Cockroaches

RISK FACTORS FOR ASTHMA

Adults with current asthma, compared to those without asthma, in the Chippewa County area are:

- More likely to be obese
- More likely to smoke
- More likely to allow smoking in their home

MANAGING YOUR ASTHMA

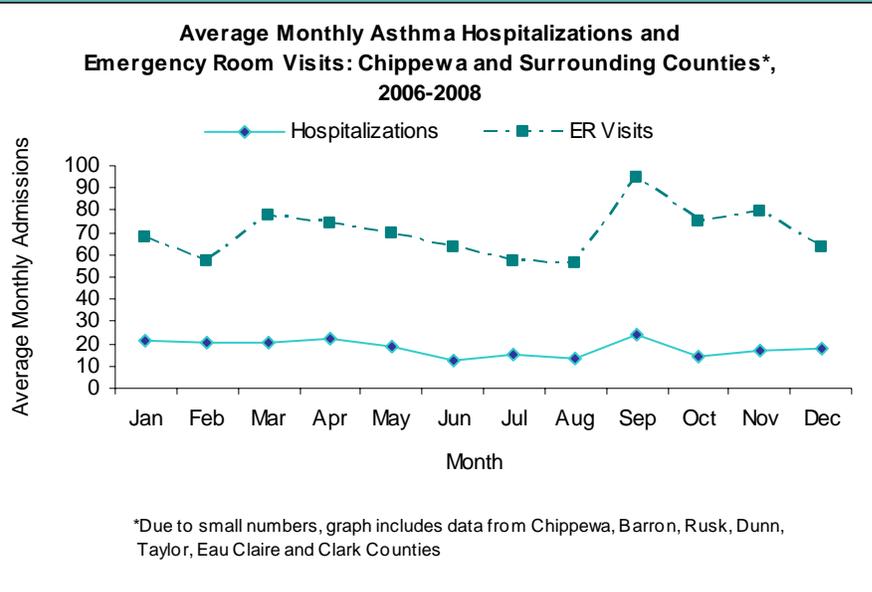

Hospitalizations and emergency room visits can be avoided by taking measures to control your asthma. Ways to control asthma include:

- Identify, avoid, and remove asthma triggers at home, at work and at school
- Use an individualized asthma action plan to control asthma. Doctors, families and children should work together to create a plan based on individual triggers, medications and warning signs
- Take asthma medication as prescribed
- Get a flu shot
- Maintain a healthy weight
- Educate teachers, employers, administrators and policy makers about asthma

CHIPPEWA COUNTY ASTHMA COALITION

SEASONALITY OF ASTHMA

In Wisconsin, asthma admissions are usually the highest in the early spring and fall. Factors thought to contribute to these seasonal peaks include increased infections and high pollen and/or fungal counts.

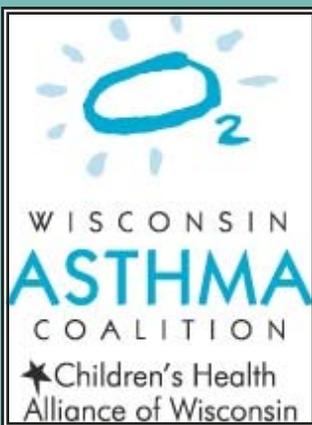

ALL PEOPLE WITH ASTHMA SHOULD RECEIVE A SEASONAL FLU VACCINATION

44.4% of adults with current asthma in the Chippewa County area had a flu shot in the last year.

Anyone with asthma over the age of 6 months should get a flu shot every year according to the Centers for Disease Control (CDC).

Adults with asthma are at high risk of developing complications after contracting the influenza virus, yet most adults with asthma do not receive an annual flu vaccination. The flu may not only make your asthma worse, but it may also cause you to make a visit to the ER, end up in the hospital or worse. Getting a flu shot may prevent all of these complications. The flu vaccine is safe and effective. All people who have asthma should be encouraged to get the flu vaccination as part of their routine care.

The Wisconsin Asthma Coalition's (WAC) mission is to develop and implement a sustainable statewide action plan that expands and improves the quality of asthma education, prevention, management, and services and eliminates the disproportionate burden of asthma in racial/ethnic and low-income populations.
