

Data Source Documentation

Indicator	Overweight and obesity, adults 18+
Demographic Group	Wisconsin adults aged 18 and older
Numerator	The number of adults in the Wisconsin Behavioral Risk Factor Survey (BRFS) sample whose self-reported weight and height yielded a calculated Body Mass Index (BMI) of 25 or greater (overweight) or 30 or greater (obese).
Denominator	The total number of adults in the Wisconsin BRFS sample in the relevant year or years who reported their weight and height. (On an annual basis, approximately 2% to 3% of BRFS respondents indicate that they don't know, or are unwilling to report, their weight.) Cases with don't know/refused responses or missing data are excluded.
Details about Data Item	<p>In the tables, the 95% confidence interval (the "+/-"column) indicates the range in which 95 of 100 identical surveys would estimate the percent of Wisconsin adults who are overweight or obese. Add the confidence interval to the estimated percent to find the high boundary and subtract it to find the low boundary. Smaller numbers of cases in the denominator produce larger confidence intervals. Results shown in the tables are weighted to represent the overall population of adults in Wisconsin.</p> <p>BMI is calculated by dividing weight in kilograms by height in meters squared (w/h^{**2}).</p> <p>All results shown in tables are weighted to represent the overall population of adults in Wisconsin.</p> <p>Component BRFS questions:</p> <ul style="list-style-type: none"> • "About how much do you weigh without shoes?" • "About how tall are you without shoes?"
Other Data Information	The Wisconsin Behavioral Risk Factor Survey is a sample survey conducted by the Office of Health Informatics in conjunction with the U.S. Centers for Disease Control and Prevention (CDC). The annual number of landline cases is currently approximately 4,500 and has ranged from approximately 4,000 to 5,000 in recent years. Weighted BRFS data are representative of the Wisconsin adult population living in households with landline telephones. CDC calculates the weights using state-level population data and includes a weighting variable in the final data set provided to the state BRFS program. The table by race and ethnicity shows estimates using combined years of data to yield a minimum of 100 cases per group. [Note: BRFS conducts cell phone interviews, but cell phone data have not yet been officially released by CDC.]

Prepared for Tracking the State Health Plan, 2010—State-Level Data

Division of Public Health

Wisconsin Department of Health Services

Data Source	<p>Wisconsin Behavioral Risk Factor Survey, Office of Health Informatics, Division of Public Health, Wisconsin Department of Health Services.</p> <p>The BRFs is an ongoing probability survey conducted by telephone and carried out in conjunction with the U.S. Centers for Disease Control and Prevention (CDC). Each survey year begins on January 1 and ends on December 31.</p>
Additional Information	<p>The CDC Web site (http://www.cdc.gov/brfss/) provides substantial information about the BRFs at both the national and state levels, including prevalence and trend data and historical question information. Information about the Wisconsin BRFs is also available at http://dhs.wisconsin.gov/stats/BRFS.htm.</p>
