2019 7 4.1		2019	7	4.1

- a. New diagnoses include only individual whose initial HIV diagnosis was made in Wisconsin.
- b. Prevalent cases include all cases presumed to be alive and living in Wisconsin, regardless of the state of initial HIV report.
- c. The average annual cases in the specified time period.
- d. Cases per 100,000 population. Rates not available for risk expsoure groups.
- e. Breakdowns are not shown if the total is <5.
- f. Disease status when first diagnosed with HIV infection, except for prevalent cases, where it is the current disease status.
- g. Cases are presented by current gender rather than sex at birth. During 2014-2018, a total of 25 transgender persons were newly diagnosed with HIV in Wisconsin.
- h. Race/ethnicity breakdowns are not shown if the cell in the subgroup has either a value of <5 or an estimated population size (denominator) <100. In such cases, the multi-racial or unknown category along with any cells that equal zero are suppressed to prevent interpolation of the suppressed cell(s). Rates for multi-racial persons are not shown because population denominators for this group are not available in the demographic data source.
- i. Age when first diagnosed with HIV infection, except for prevalence cases, where it is the current age.
