

WISCONSIN 2007 BLOOD LEAD TESTING DATA FOR CHILDREN LESS THAN 6 YEARS OF AGE

Source: Wisconsin Blood Lead Testing Data (all data current as of August 31, 2010)

Tested: Number of unduplicated children receiving a blood lead test during 2007, using the date, place and result for each child's first test during 2007, or their first test ≥ 10 mcg/dL if poisoned. If a child had a venous test within 3 mo. of a capillary test, the venous result was used.

Poisoned: A capillary or venous BLL ≥ 10 mcg/dL; if the test was a capillary sample followed within 3 mo. by a venous test, the venous result was used.

Case: One venous BLL ≥ 20 mcg/dL or 2 venous BLLs ≥ 15 mcg/dL drawn at least 90 days apart; includes new cases and those initially identified in a previous calendar year.

Prevalence: Number of poisoned children divided by the number of children tested; indicates the total identified burden of lead poisoning in a community.

WISCONSIN 2007 BLOOD LEAD TESTING DATA FOR CHILDREN LESS THAN 6 YEARS OF AGE

Source: Wisconsin Blood Lead Testing Data (all data current as of August 31, 2010)

Tested: Number of unduplicated children receiving a blood lead test during 2007, using the date, place and result for each child's first test during 2007, or their first test ≥ 10 mcg/dL if poisoned. If a child had a venous test within 3 mo. of a capillary test, the venous result was used.

Poisoned: A capillary or venous BLL ≥ 10 mcg/dL; if the test was a capillary sample followed within 3 mo. by a venous test, the venous result was used.

Case: One venous BLL ≥ 20 mcg/dL or 2 venous BLLs ≥ 15 mcg/dL drawn at least 90 days apart; includes new cases and those initially identified in a previous calendar year.

Prevalence: Number of poisoned children divided by the number of children tested; indicates the total identified burden of lead poisoning in a community.
