

WISCONSIN 2010 BLOOD LEAD TESTING DATA FOR CHILDREN LESS THAN 6 YEARS OF AGE

Source: Wisconsin Blood Lead Testing Data, WIC Enrollment Files, Medicaid Eligibility Files (all data current as of August, 2011)

Test: Number of unduplicated children with a capillary or venous blood lead test. If a child has a venous test within three months after a capillary test, the data from the venous test are included in this report.

Poisoned: A capillary or venous BLL >10 mcg/dL. If the test is a capillary sample followed within 3 months by a venous test, the value of the venous test is used.

Case: One venous BLL >20 mcg/dL or 2 venous BLLs >15 mcg/dL drawn at least 90 days apart; includes both new cases and those identified in a previous calendar year.

Prevalence: Number of poisoned children divided by the number of children tested; indicates the total identified burden of lead poisoning in a community.

Medicaid and WIC Enrollment: A child is counted if they were identified as enrolled in either program at any point during the calendar year.

WISCONSIN 2010 BLOOD LEAD TESTING DATA FOR CHILDREN LESS THAN 6 YEARS OF AGE

Source: Wisconsin Blood Lead Testing Data, WIC Enrollment Files, Medicaid Eligibility Files (all data current as of August, 2011)

Test: Number of unduplicated children with a capillary or venous blood lead test. If a child has a venous test within three months after a capillary test, the data from the venous test are included in this report.

Poisoned: A capillary or venous BLL >10 mcg/dL. If the test is a capillary sample followed within 3 months by a venous test, the value of the venous test is used.

Case: One venous BLL >20 mcg/dL or 2 venous BLLs >15 mcg/dL drawn at least 90 days apart; includes both new cases and those identified in a previous calendar year.

Prevalence: Number of poisoned children divided by the number of children tested; indicates the total identified burden of lead poisoning in a community.

Medicaid and WIC Enrollment: A child is counted if they were identified as enrolled in either program at any point during the calendar year.

WISCONSIN 2010 BLOOD LEAD TESTING DATA FOR CHILDREN LESS THAN 6 YEARS OF AGE

Source: Wisconsin Blood Lead Testing Data, WIC Enrollment Files, Medicaid Eligibility Files (all data current as of August, 2011)

Test: Number of unduplicated children with a capillary or venous blood lead test. If a child has a venous test within three months after a capillary test, the data from the venous test are included in this report.

Poisoned: A capillary or venous BLL >10 mcg/dL. If the test is a capillary sample followed within 3 months by a venous test, the value of the venous test is used.

Case: One venous BLL >20 mcg/dL or 2 venous BLLs >15 mcg/dL drawn at least 90 days apart; includes both new cases and those identified in a previous calendar year.

Prevalence: Number of poisoned children divided by the number of children tested; indicates the total identified burden of lead poisoning in a community.

Medicaid and WIC Enrollment: A child is counted if they were identified as enrolled in either program at any point during the calendar year.

WISCONSIN 2010 BLOOD LEAD TESTING DATA FOR CHILDREN LESS THAN 6 YEARS OF AGE

Source: Wisconsin Blood Lead Testing Data, WIC Enrollment Files, Medicaid Eligibility Files (all data current as of August, 2011)

Test: Number of unduplicated children with a capillary or venous blood lead test. If a child has a venous test within three months after a capillary test, the data from the venous test are included in this report.

Poisoned: A capillary or venous BLL >10 mcg/dL. If the test is a capillary sample followed within 3 months by a venous test, the value of the venous test is used.

Case: One venous BLL >20 mcg/dL or 2 venous BLLs >15 mcg/dL drawn at least 90 days apart; includes both new cases and those identified in a previous calendar year.

Prevalence: Number of poisoned children divided by the number of children tested; indicates the total identified burden of lead poisoning in a community.

Medicaid and WIC Enrollment: A child is counted if they were identified as enrolled in either program at any point during the calendar year.

WISCONSIN 2010 BLOOD LEAD TESTING DATA FOR CHILDREN LESS THAN 6 YEARS OF AGE

Source: Wisconsin Blood Lead Testing Data, WIC Enrollment Files, Medicaid Eligibility Files (all data current as of August, 2011)

Test: Number of unduplicated children with a capillary or venous blood lead test. If a child has a venous test within three months after a capillary test, the data from the venous test are included in this report.

Poisoned: A capillary or venous BLL >10 mcg/dL. If the test is a capillary sample followed within 3 months by a venous test, the value of the venous test is used.

Case: One venous BLL >20 mcg/dL or 2 venous BLLs >15 mcg/dL drawn at least 90 days apart; includes both new cases and those identified in a previous calendar year.

Prevalence: Number of poisoned children divided by the number of children tested; indicates the total identified burden of lead poisoning in a community.

Medicaid and WIC Enrollment: A child is counted if they were identified as enrolled in either program at any point during the calendar year.
