### WISCONSIN 2018 BLOOD LEAD TESTING DATA FOR CHILDREN LESS THAN 6 YEARS OF AGE

**Source:** Wisconsin Blood Lead Testing Data (all data current as of November 1, 2019)

Tested: Number of unduplicated children with a capillary or venous blood lead test. If a child has a venous test within 90 days after a capillary test, the date, place and result from the venous test was used.

Tested 5 mcg/dL or above: Number of unduplicated children who had a capillary or venous test of 5 mcg/dL or above. If the test is a capillary sample followed within 90 days by a venous test, the value of the venous test result was used.

Percent 5 mcg/dL or above: Number of children who tested 5 mcg/dL or above, divided by the number of children tested multiplied by 100.

**Notes:** Children were assigned a health department jurisdiction based on the address of residence at the time of the blood test as reported. The sum of the health departments do not add up to the state total. This is because children may be counted in two or more health department jurisdictions if they received separate blood tests while living in different jurisdictions in that year but children are only counted once towards the state total.

WISCONSIN 2018 BLOOD LEAD TESTING DATA FOR CHILDREN LESS THAN 6 YEARS OF AGE

Source: Wisconsin Blood Lead Testing Data (all data current as of November 1, 2019)

Tested: Number of unduplicated children with a capillary or venous blood lead test. If a child has a venous test within 90 days after a capillary test, the date, place and result from the venous test was used.

Tested 5 mcg/dL or above: Number of unduplicated children who had a capillary or venous test of 5 mcg/dL or above. If the test is a capillary sample followed within 90 days by a venous test, the value of the venous test result was used.

Percent 5 mcg/dL or above: Number of children who tested 5 mcg/dL or above, divided by the number of children tested multiplied by 100.

Notes: Children were assigned a health department jurisdiction based on the address of residence at the time of the blood test as reported. The sum of the health departments do not add up to the state total. This is because children may be counted in two or more health department jurisdictions if they received separate blood tests while living in different jurisdictions in that year but children are only counted once towards the state total.

## WISCONSIN 2018 BLOOD LEAD TESTING DATA FOR CHILDREN LESS THAN 6 YEARS OF AGE

Source: Wisconsin Blood Lead Testing Data (all data current as of November 1, 2019)

Tested: Number of unduplicated children with a capillary or venous blood lead test. If a child has a venous test within 90 days after a capillary test, the date, place and result from the venous test was used.

Tested 5 mcg/dL or above: Number of unduplicated children who had a capillary or venous test of 5 mcg/dL or above. If the test is a capillary sample followed within 90 days by a venous test, the value of the venous test result was used.

Percent 5 mcg/dL or above: Number of children who tested 5 mcg/dL or above, divided by the number of children tested multiplied by 100.

Notes: Children were assigned a health department jurisdiction based on the address of residence at the time of the blood test as reported. The sum of the health departments do not add up to the state total. This is because children may be counted in two or more health department jurisdictions if they received separate blood tests while living in different jurisdictions in that year but children are only counted once towards the state total.

### WISCONSIN 2018 BLOOD LEAD TESTING DATA FOR CHILDREN LESS THAN 6 YEARS OF AGE

Source: Wisconsin Blood Lead Testing Data (all data current as of November 1, 2019)

Tested: Number of unduplicated children with a capillary or venous blood lead test. If a child has a venous test within 90 days after a capillary test, the date, place and result from the venous test was used.

Tested 5 mcg/dL or above: Number of unduplicated children who had a capillary or venous test of 5 mcg/dL or above. If the test is a capillary sample followed within 90 days by a venous test, the value of the venous test result was used.

Percent 5 mcg/dL or above: Number of children who tested 5 mcg/dL or above, divided by the number of children tested multiplied by 100.

Notes: Children were assigned a health department jurisdiction based on the address of residence at the time of the blood test as reported. The sum of the health departments do not add up to the state total. This is because children may be counted in two or more health department jurisdictions if they received separate blood tests while living in different jurisdictions in that year but children are only counted once towards the state total.

## Wisconsin 2018 Blood Lead Testing Data for Children Less Than 6 Years of Age

**Source:** Wisconsin Blood Lead Testing Data (all data current as of November 1, 2019)

**Tested:** Number of unduplicated children with a capillary or venous blood lead test. If a child has a venous test within 90 days after a capillary test, the date, place and result from the venous test was used.

**Tested 5 mcg/dL or above:** Number of unduplicated children who had a capillary or venous test of 5 mcg/dL or above. If the test is a capillary sample followed within 90 days by a venous test, the value of the venous test result was used.

**Percent 5 mcg/dL or above:** Number of children who tested 5 mcg/dL or above, divided by the number of children tested multiplied by 100.

**Notes:** Children were assigned a health department jurisdiction based on the address of residence at the time of the blood test as reported. The sum of the health departments do not add up to the state total. This is because children may be counted in two or more health department jurisdictions if they received separate blood tests while living in different jurisdictions in that year but children are only counted once towards the state total.

WISCONSIN 2018 BLOOD LEAD TESTING DATA FOR CHILDREN LESS THAN 6 YEARS OF AGE

Source: Wisconsin Blood Lead Testing Data (all data current as of November 1, 2019)

Tested: Number of unduplicated children with a capillary or venous blood lead test. If a child has a venous test within 90 days after a capillary test, the date, place and result from the venous test was used.

Tested 5 mcg/dL or above: Number of unduplicated children who had a capillary or venous test of 5 mcg/dL or above. If the test is a capillary sample followed within 90 days by a venous test, the value of the venous test result was used.

Percent 5 mcg/dL or above: Number of children who tested 5 mcg/dL or above, divided by the number of children tested multiplied by 100.

Notes: Children were assigned a health department jurisdiction based on the address of residence at the time of the blood test as reported. The sum of the health departments do not add up to the state total. This is because children may be counted in two or more health department jurisdictions if they received separate blood tests while living in different jurisdictions in that year but children are only counted once towards the state total.
