<sup>\*</sup> Cases per 100,000 population.

## Wisconsin sexually transmitted disease surveillance report, 2015 Unadjusted\* and imputed\*\* cases per 100,000 population by race Western Region

	White		African A	American	America	n Indian	Asian/Pacific Islander		
	Unadjusted*	Imputed**	Unadjusted*	Imputed**	Unadjusted*	Imputed**	Unadjusted*	Imputed**	
Chlamydia	258	295	1,554	1,798	702	800	231	243	
Gonorrhea	18	19	392	399	124	124	44	44	
Syphilis	2	2	0	0	0	0	0	0	
Total	278	316	1,946	2,197	826	924	276	287	

<sup>\*</sup> The unadjusted rate is the number of reported cases with specified race per 100,000 population. Because some cases are reported without specified race, the unadjusted rate under-estimates actual morbidity and thus should be regarded as a minimum estimate.

<sup>\*\*</sup> The imputed rate takes into consideration cases reported without race specified. To calculate the imputed rate, reported cases with unspecified race were statistically allocated using the age-sex-county-specific race distribution for cases with specified race. Thus, imputed rates specified in this table are estimates.

#### **Technical Notes**

- These reports are compiled by the Wisconsin STD Control Section and are based on STD
  case surveillance data collected by the Wisconsin Division of Public Health (DPH). In
  Wisconsin, state statutes require health care providers to report cases of chlamydia,
  gonorrhea, syphilis, chancroid and pelvic inflammatory disease to local health
  departments. Local health departments in turn forward reports to the DPH.
- 2. These reports include cases diagnosed within the specified period. Additional cases diagnosed within the specified period may continue to be reported. Thus, this report should be considered provisional, and this supersedes all previous reports.
- 3. Reporting of STD cases is incomplete. Reporting rates may vary by disease, geographic region, and demographic groups. At any time, reported STD cases represent only part of the total number of diagnosed cases, therefore STD surveillance data likely underestimates total STD morbidity.
- 4. In these reports, rates presented are cases per 100,000 population. Rates are not calculated for categories with small numbers of cases. See each report for the rate calculation threshold.
- 5. Typically a significant number of STD cases are reported with unspecified race. When noted, imputed race-specific rates have been calculated. To calculate the imputed rate, reported cases with unspecified race were statistically allocated using the county-specific race distribution among cases with specified race. Thus, imputed rates specified in this table are estimates and should be used only for comparison.
- 6. In these reports, cases are allocated to the county of residence at the time of diagnosis. Cases diagnosed among inmates of correctional facilities are allocated to the county of the facility.
