

# Neonatal Abstinence Syndrome Rate by County of Residence, Wisconsin, 2009-2014

## Data source and methods

Hospital discharge data (2009-2014) were used to calculate rates of Neonatal Abstinence Syndrome (NAS) per 1,000 delivery and newborn hospitalizations (hospitalizations 0 to 28 days after delivery) for Wisconsin residents, including hospitalizations in Minnesota. NAS was identified using the ICD-9-CM diagnosis code 779.5.

Rates are not presented for counties with fewer than five hospitalizations with a NAS diagnosis, as low counts may produce unstable rates.
