Context

- Wisconsin ranks last in the country in the overall well-being of Black children based on an index of 12 measures that gauge a child's success from birth to adulthood.²
- Milwaukee is the most racially segregated large city in the United States.³
- While the infant mortality rate has dropped in Milwaukee in recent years, it remains among the highest of the nation's big cities.⁴ The infant mortality rate is commonly accepted as a measure of the general health and well-being of a population.⁵
- 4 in 10 Blacks in Milwaukee live in poverty, compared to 1 in 3 Hispanics and 1 in 7 Whites.¹
- 45% of Black adults have completed some college or more education, compared to 29% of Hispanics and 64% of Whites.¹

Milwaukee: The most segregated large city in the U.S.²

1. American Community Survey, 2010-2014 Estimates.
2. Annie E. Casey Foundation, Race for Results, 2014 (using 2010-2013 data).
3. The Persistence of Segregation in the Metropolis: New Findings from the 2010 Census. JR Logan and BJ Stults, March 24, 2011 (using 2010 census data).
4. Annie E. Casey Foundation, Kids Count, 2014 (using 2013 infant mortality from CDC).
5. CDC Infant Mortality fact sheet.

New HIV Diagnoses⁶

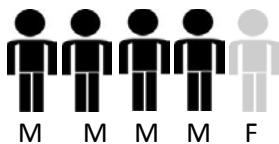

- Blacks accounted for 64% of HIV diagnoses during 2010-2014 but only 40% of the city's population.
- The HIV diagnosis rate in Black men and women in the city of Milwaukee was more than 3.5 times higher than in Whites and 2 times higher than in Hispanics.

By race, gender, and risk exposure

New HIV diagnoses by race/ethnicity, City of Milwaukee, 2010-2014		
Race/ethnicity*	Number	Annual rate per 100,000
Black	375	162
Hispanic	86	83
White	97	44

*Numbers are relatively small in other groups so data cannot be shown.

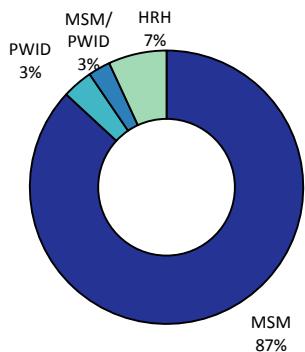

Males accounted for 4 in 5 Blacks diagnosed with HIV in Milwaukee during 2010-2014.

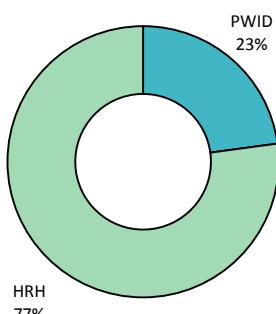

HIV diagnoses in Blacks by sex^{††} and risk exposure, Wisconsin, 2010-2014

- MSM = Men who have sex with men
- MSM/PWID = MSM who also inject drugs
- PWID = People who inject drugs
- HRH = High-risk heterosexual risk

Black Males (n=305)

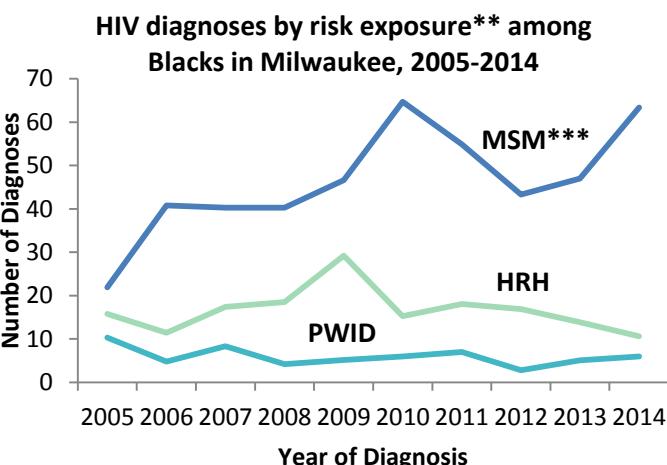

Black Females (n=70)

^{††} Sex refers to sex at birth

- 90% of new diagnoses in Black males are in men who have sex with men, including those who inject drugs.
- 77% of new diagnoses in Black women are attributed to high-risk heterosexual contact.

Risk exposure trends

** Data have been statistically adjusted, using CDC's multiple imputation procedure, to account for individuals with unknown risk, unless otherwise noted.

***Includes MSM who are also PWID

HIV diagnoses in Milwaukee during 2005-2014:

- More than doubled in young Black MSM.
- Declined among those with high-risk heterosexual contact and injection drug use.

Age at diagnosis

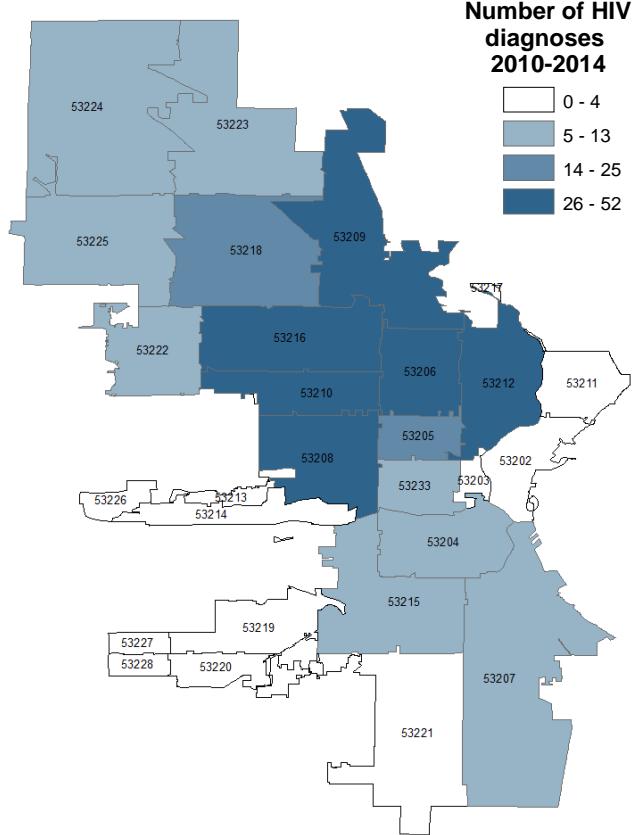

- Black males were diagnosed at a much younger age than both Black females and males of other racial/ethnic groups.
- No HIV-infected infants of any race were born in Milwaukee during 2010-2014.

Median age at diagnosis by race/ethnicity* and sex^{††}, Milwaukee, 2010-2014

Race/ethnicity	Males	Females
Black	25	39.5
Hispanic	32	43.5
White	39	42

Geography

HIV diagnoses among Blacks by zip code[†] Milwaukee, 2010-2014
