Envisioning the End of the HIV Epidemic
Wisconsin Integrated HIV Prevention & Care Plan 2017-2021

10 Key Elements

- Target HIV resources to the right people, in the right places, and with the right actions.
- Increase access to PrEP: one pill, once a day that can help prevent HIV.
- Streamline testing, prevention, and treatment services for sexually transmitted infections (STI), hepatitis C virus (HCV), and HIV.
- Promote the health of gay and bisexual men.
- Promote drug user health.
- Grow HIV/STI/HCV partner services.
- Support patient-centered care that focuses on patients' basic needs, such as housing.
- Educate community members about their health insurance options and help underserved populations sign up for health care coverage.
- Increase the use of data to improve HIV health outcomes.
- Encourage policies and practices that reduce discrimination and stigma.

Goals

1. Reduce new infections.
2. Increase access to care and improving health outcomes for people living with HIV.
3. Reduce HIV-related disparities and health inequities.
4. Achieve a more coordinated response to the HIV epidemic.

Partners

This Integrated HIV Plan was a collaborative effort between the state Wisconsin AIDS/HIV Program following partners:

- Statewide Action Planning Group, local health departments, HIV service providers, HIV/AIDS service and community-based organizations, people living with HIV, and residents of Wisconsin.
