Communicable Disease Case Reporting and Investigation Protocol
VANCOMYCIN-INTERMEDIATE AND VANCOMYCIN-RESISTANT
STAPHYLOCOCCUS AUREUS INFECTIONS

I. IDENTIFICATION AND DEFINITION OF CASES
A. Clinical Description:
*Staphylococcus aureus* causes a variety of syndromes, including skin and soft tissue infections, empyema, bloodstream infections, sepsis, pneumonia, osteomyelitis, septic arthritis, endocarditis, and meningitis. Some individuals may carry *S. aureus* with no symptoms of illness. While most isolates of *S. aureus* are susceptible to the antibiotic vancomycin, rare infections may be caused by isolates that are not fully susceptible or resistant. These are known as vancomycin-intermediate *Staphylococcus aureus* (VISA) and vancomycin-resistant *Staphylococcus aureus* (VRSA), respectively.

B. Laboratory Criteria:
Isolation of *S. aureus* from any body site, and the isolate has a minimum inhibitory concentration (MIC) of 4–8 ug/ml (VISA) or MIC > 16 (VRSA), detected and defined according to the Clinical and Laboratory Standards Institute (CLSI)-approved standards and recommendations.

C. Wisconsin Surveillance Case Definition:
Confirmed: An isolate of *S. aureus* confirmed to meet laboratory criteria by testing at the Wisconsin State Laboratory of Hygiene (WSLH).

II. REPORTING
A. Wisconsin Disease Surveillance Category II – Methods for Reporting: VISA and VRSA infections shall be reported to the patient’s local health officer or to the local health officer’s designee within 72 hours of recognition of a case or suspected case, per Wis. Admin. Code § DHS 145.04 (3) (b). Report electronically through the Wisconsin Electronic Disease Surveillance System (WEDSS), or mail or fax a completed Acute and Communicable Disease Case Report (F-44151) to the address on the form.

Laboratories must submit isolates of *S. aureus* with vancomycin susceptibility test results of MIC ≥ 16 ug/ml to the WSLH for confirmatory testing.

B. Responsibility for Reporting: According to Wis. Admin. Code § DHS 145.04(1), persons licensed under Wis. Stat. ch. 441 or 448, laboratories, health care facilities, teachers, principals, or nurses serving a school or day care center, and any person who knows or suspects that a person has a communicable disease identified in Appendix A.

C. Clinical Criteria for Reporting: None.

D. Laboratory Criteria for Reporting: Isolation of *S. aureus* from any body site, and the isolate tests intermediate or resistant to vancomycin, (MIC 4–8 ug/ml for VISA and MIC ≥ 16 for VRSA), detected and defined according to the CLSI-approved standards and recommendations.

III. CASE INVESTIGATION
A. Responsibility for case investigation: It is the responsibility of the local or Tribal health department (LTHD) to investigate or arrange for investigation of suspected or confirmed cases as soon as is reasonably possible. A case investigation may include information collected by phone, in person, in writing, or through review of medical records or communicable disease report forms, as necessary and appropriate. The Wisconsin Healthcare-Associated Infections (HAI) Prevention Program within the Division of Public Health (DPH) is available to assist or lead these investigations and support LTHDs and facilities through not only the case identification, but ongoing response.
B. **Required Documentation:**
   1. Complete the WEDSS disease incident investigation report, including appropriate, disease-specific tabs.

IV. **PUBLIC HEALTH INTERVENTIONS AND PREVENTION MEASURES**

   B. Patients should be managed according to recommendations described in the DPH “*Guidelines for Prevention and Control of Multidrug-Resistant Organisms in Health Care Settings,*” and the Centers for Disease Control and Prevention (CDC) “*Management of Multidrug Resistant Organisms in Healthcare Settings, 2006.*” Special attention should be given to restriction of vancomycin use.
