WELCOME

In September 2016, the Centers for Medicare & Medicaid Services (CMS) released a new emergency preparedness rule for 17 sectors of the U.S. health care system. The new rule asks the affected provider types to demonstrate that they are doing risk assessments; writing appropriate plans, policies and procedures; and training and testing their plans with staff and partners in the community.

One of the resources CMS suggests providers can seek out to assist them are the regional health emergency readiness coalitions (HERCs). In Wisconsin, we have seven of these coalitions. The memberships of these coalitions—which include hospitals, emergency medical services, public health agencies, emergency management agencies, and a range of other partners—plan, train, and exercise together to be ready to support one another in large-scale emergencies. We invite you to reach out to your region’s coordinator, if you haven’t already, to find out more. A map of the regions and a link to the current contact information for their coordinators can be found on the next page.

Each of these toolkits gives facilities that fall under the new rule an overview of the requirements for their provider type, as well as some sample templates that can be used in their planning efforts. In topic areas where there wasn’t a tool or template readily available, the toolkit offers planning worksheets that feature a list of example questions to help facilities think through relevant issues that can help them draft their plans and policies.

As you may be aware, the Division of Quality Assurance (DQA, another part of the Wisconsin Department of Health Services), is the state survey agency that oversees Wisconsin’s certification process on behalf of CMS. While DQA has provided our staff with information and background on the CMS rule, our provider toolkits were produced independently and are intended for advisory purposes only. None of the tools or assistance provided by our office or the regional healthcare coalitions guarantees any outcome during survey visits. Facilities are solely responsible for meeting CMS requirements.

We wish you success in your efforts to enhance your readiness to protect your patients, clients, residents, their families, and your staff during emergency situations, and hope the contents of this toolkit help you on your way!

Best Wishes,

Dave Rozell

David W. Rozell, MPH
Health Emergency Preparedness Section Chief
Office of Preparedness and Emergency Health Care
Wisconsin Department of Health Services

*Effective 11/29/2019*
WISCONSIN’S HEALTHCARE EMERGENCY READINESS COALITIONS (HERC)

Below is a map of the regional healthcare coalitions in Wisconsin. Contact information for coalition leaders is provided in the Healthcare Emergency Readiness Coalition Regional Contact document: https://www.dhs.wisconsin.gov/publications/p02587.pdf. Questions about the federal regulation for emergency preparedness can be directed to your regional healthcare emergency readiness coalition coordinator.

In addition, the Wisconsin Healthcare Emergency Preparedness Program website can provide links to regional websites, answers, and updates on many emergency preparedness topics: https://www.dhs.wisconsin.gov/preparedness/hospital/index.htm
OVERVIEW

**General Information**

On September 16, 2016, the Centers for Medicare & Medicaid Services (CMS) published new federal regulations that included updated emergency preparedness requirements for providers and suppliers participating in Medicare and Medicaid. For provider-specific text or a link to the full text regulation, see Appendix A: Federal Regulation. These requirements fall under new conditions of participation/conditions for coverage; if these requirements are not met, providers and suppliers risk citation and consequent loss of Medicare or Medicaid reimbursement. The regulation went into effect on November 15, 2016, and must be implemented by November 15, 2017.

NOTE (3.6.19): CMS published an updated Interpretive Guidelines, see Appendix Z, on February 1, 2019.

Seventeen provider and supplier types receiving Medicare or Medicaid reimbursement are affected by the CMS emergency preparedness rule. The provider and supplier types are:

- Ambulatory surgical centers
- Clinics and rehabilitation agencies, and public health agencies as providers of outpatient physical therapy and speech-language pathology services
- Community mental health centers
- Comprehensive outpatient rehabilitation facilities
- Critical access hospitals
- End-stage renal disease facilities
- Home health agencies
- Hospices (inpatient and outpatient)
- Hospitals
- Intermediate care facilities for individuals with intellectual disabilities
- Long term care (skilled nursing facilities)
- Organ procurement organizations
- Programs of all inclusive care for the elderly
- Psychiatric residential treatment facilities
- Religious nonmedical health care institutions
- Rural health clinics and federally qualified health clinics
- Transplant centers

The regulation requires affected providers and suppliers to comply with all applicable federal, state, and local emergency preparedness requirements. The regulation also requires providers and suppliers to develop and maintain a comprehensive emergency preparedness program, utilizing an all-hazards approach that includes, but is not limited to, the following domains:

- **Risk Assessment and Planning:** Develop an emergency preparedness plan based on facility and community risk assessments and utilizing an all-hazards approach; address patient populations, services offered for continuity of operations, and succession plans.
- **Policies and Procedures:** Develop emergency preparedness policies and procedures based on the risk assessment, emergency plan, and communication plan; address subsistence needs, patient tracking, evacuation, sheltering in place, protection of medical documentation, and arrangements with other providers in the event of patient transfer.
- **Communication Plan:** Develop an emergency preparedness communication plan that complies with federal, state, and local laws; include contact information for relevant partners, methods to share protected patient information, and primary and alternate means of communication.

*Effective 11/29/2019*
• **Training and Testing**: Develop an emergency preparedness training and testing program based on the risk assessment, emergency plan, and communication plan; provide annual training and testing on emergency preparedness policies and procedures.*

A number of the CMS regulations line up with current accreditation standards for various accrediting bodies. A crosswalk for the rule and current accreditation standards can be found in *Appendix B: Emergency Preparedness Regulations Crosswalk*. *Effective 11/29/2019*
Using This Toolkit

This toolkit provides information on the CMS Emergency Preparedness rule for Clinics, Rehabilitation Agencies, and Public Health Agencies as Providers of Outpatient Physical Therapy and Speech-Language Pathology Services (OPT/SLP organizations). There are four major content sections: Risk Assessment and Planning, Policies and Procedures, Communication Plan, and Training and Testing. The content sections contain detailed information about the given portion of the rule.

At the end of each of the four content sections, there is a subsection titled Tools and Templates. The Tools and Templates subsection contains relevant tools, templates, and resources for the given section. These tools, templates, and resources are mentioned in the content portion of each section, and are linked to the tools and templates subsection for further explanation and provision.

The sections following the four content sections include additional requirements that may be applicable to the provider type, pertinent resources, definitions, acronyms, and the appendices.

*Effective 11/29/2019*
RISK ASSESSMENT AND PLANNING

OPT/SLP organizations should develop and maintain an emergency preparedness plan that is reviewed and updated at least every two years.* A checklist that can help OPT/SLP organizations in emergency preparedness planning can be found here: Emergency Preparedness Planning Checklist. OPT/SLP organizations should have an emergency plan that includes, at the least, the following elements:

**Risk Assessment**

OPT/SLP organizations should base their emergency plan on documented facility-based and community-based risk assessments, using an all-hazards approach. An all-hazards approach integrates response and focuses on capacities and capabilities that support preparedness for a spectrum of emergencies. The all-hazards approach does account for location; all-hazards planning does not address any specific potential threat, but promotes an organization’s readiness to respond to a broad range of applicable emergencies. Organizations may use community-based risk assessments developed by other entities, but should have a copy of the risk assessment and ensure their emergency plan is in alignment with the community-based risk assessment. Additionally, the emergency plan should include strategies to address the emergencies identified by the risk assessments.

One source of community-based risk assessments is an organization’s Healthcare Emergency Readiness Coalition: Wisconsin’s Healthcare Coalitions. A template for conducting a Facility-based Hazard Vulnerability Assessment (HVA) has also been provided.

**Continuity of Operations**

OPT/SLP organization emergency plans should address their patient population, including at-risk patients; services provided in emergencies; and continuity of operations, including delegations of authority and succession plans. OPT/SLP organizations need to identify and plan for patients who may require additional assistance. Additionally, OPT/SLP organizations should identify staff roles as necessitated by the emergency, through succession planning and clear delegations of authority. At the least, OPT/SLP organizations should identify a qualified individual who is authorized in writing to act in the absence of the administrator or person legally responsible for the operations of the organization. Continuity of operations plans should include facility- and community-based risk assessments and identify essential personnel, essential functions, and critical resources. These plans should also describe how the organization will protect vital records and IT data, as well as identify and locate alternate facilities and financial resources as needed.

Examples of useful continuity of operations tools include:

*Emergency Operations Plan Activation*
*Essential Services Roles and Responsibilities*

**Fire Response**

OPT/SLP organizations’ emergency plans should address the location and use of alarm systems, signals, and methods of containing fire. The plan should follow guidelines set forth by the National Fire Protection Association (NFPA). Additionally, the emergency plan should be developed and maintained with assistance from

*Effective 11/29/2019*
fire, safety, and other appropriate experts. OPT/SLP organizations should document their collaboration with these experts and include them in the annual review of the plan.

A worksheet with questions to consider for fire response can be found here: Fire Response.

**Cooperation and Collaboration**

In the development of an emergency plan, OPT/SLP organizations should include a process for cooperation with local, tribal, regional, state, and federal emergency preparedness officials. Collaboration with these officials will encourage integrated responses during emergency situations. OPT/SLPs are no longer required to include documentation of their efforts to contact such officials. However, when OPT/SLPs are able to participate in cooperative planning efforts, documentation of that participation is recommended.

The Collaboration Contact Grid provides a template for documenting emergency preparedness contacts.
Tools and Templates: Risk Assessment and Planning

This section contains tools, templates, and resources that may be helpful for risk assessment and planning. Included are the:

Emergency Preparedness Planning Checklist

Facility-Based HVA

Emergency Operations Plan Activation

Essential Services Roles and Responsibilities

Fire Response

Collaboration Contact Grid
Emergency Preparedness Planning Checklist

The Emergency Preparedness Checklist is located on the CMS Survey and Certification website. This checklist can help OPT/SLP organizations in emergency preparedness planning. The checklist reviews major topics that emergency preparedness programs should address, and provides information on details related to those topics. This can be an important tool for tracking progress on creating an emergency preparedness plan.

Facility-Based HVA

HVAs are a systematic approach to identifying potential hazards that might affect an organization. Vulnerability is determined by assessing risk associated with each hazard and analyzing assessment findings to create a prioritized comparison of hazard vulnerabilities. The vulnerability is related to both the impact on organization and community function and the likely demands the hazard would create. The tools at this website can be used to conduct a facility-based hazard vulnerability assessment for OPT/SLP organizations.

https://www.calhospitalprepare.org/hazard-vulnerability-analysis

Emergency Operations Plan Activation

The following grid is an example of the type of tool OPT/SLP organizations may create to document a chain of responsibility for activating emergency operations plans. Individuals selected would be responsible for assessing emergent situations and activating the emergency operations plan when appropriate.

<table>
<thead>
<tr>
<th>Individuals Responsible for Emergency Operations Plan Activation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Name</td>
</tr>
<tr>
<td>------</td>
</tr>
<tr>
<td>Primary</td>
</tr>
<tr>
<td>Backup 1</td>
</tr>
<tr>
<td>Backup 2</td>
</tr>
</tbody>
</table>

*Effective 11/29/2019*
**Effective 11/29/2019**

*Essential Services Roles and Responsibilities*

This grid is an example of a tool OPT/SLP organizations may create to track roles and responsibilities for essential services during emergency events. Services identified should be essential during emergencies. Roles and responsibilities for identified services should be clearly stated, and individuals providing these services should be aware of their responsibilities. A primary and secondary point of contact should be established for each service, so that in the case of an emergency, the service can be activated and coordinated appropriately.

<table>

</tbody>
</table>
Fire Response

Below are some questions to consider when developing emergency plans pertaining to fire response. These questions are not exhaustive; instead, they are intended to initiate and facilitate a conversation around necessary aspects of the policies and procedures.

Questions for consideration:

- Where is the location of the facility’s emergency plan for dealing with fire?
- Does the plan address location and use of alarm systems, signals, and fire containment methods as laid out by the National Fire Protection Association?
- If not, how will the plan be updated to address these topics?
- How will the fire plan be integrated with the overall emergency plan?
- What experts could be contacted in the community to assist with the plan’s development and/or annual maintenance, as required by the rule?
- How will that collaboration and assistance be documented?
Collaboration Contact Grid

The following grid can be completed and retained for the purpose of collaborating with appropriate local, tribal, regional, state, and federal emergency preparedness partners. These contacts can be resources during emergency preparedness program development and evaluation, and during real-world emergencies. Using an all-hazards approach to emergency preparedness, OPT/SLP organizations should have the ability to communicate with all relevant partners, if necessary. However, during an emergency, organizations should prioritize communication with those entities with an immediate response role such as local public health, local emergency management, and their regional healthcare coalition.

<table>

<tr>
<td>Federal: FEMA</td>
</tr>
</tbody>
</table>

*Effective 11/29/2019*
POLICIES AND PROCEDURES

OPT/SLP organizations should develop and implement emergency preparedness policies and procedures that are based on their risk assessment, emergency plan, and communication plan. These policies and procedures should be reviewed and updated at least every two years.*, OPT/SLP organizations may choose whether to incorporate emergency policies and procedures into their emergency plan or to include policies and procedures into their standard operating procedures/operations manual. However, the emergency plan and policies and procedures should always be easily accessible, and it is recommended that they be co-located.

At a minimum, the emergency preparedness policies and procedures for OPT/SLP organizations should address the following elements:

**Evacuation and Sheltering in Place**

Emergency preparedness policies and procedures should include processes for safe evacuation from the OPT/SLP organization. Evacuation procedures should consider the treatment needs of evacuating patients, evacuation protocols for any other individuals sheltered in the OPT/SLP organization, responsibilities held by staff members, transportation of patients, identification of evacuation location(s), and primary and alternate means of communication with external sources of assistance.

In certain situations, evacuation of the OPT/SLP organization may not be appropriate or possible. For these situations, as identified by the organization’s risk assessment, OPT/SLP organizations should develop policies and procedures for sheltering in place. OPT/SLP organizations should develop criteria for which patients and staff would shelter in place. Organizations should determine their policies based on the type of emergency and the types of patients, staff, volunteers, and visitors that may be on site during an emergency.

The *Evacuation and Sheltering in Place* worksheet provides questions to consider for evacuation and sheltering in place policies.

**Medical Documentation**

Emergency policies and procedures should include a system of medical documentation that is readily available while protecting the confidentiality of patient information. The system of medical documentation should support continuity of care, whether in the affected OPT/SLP organization or in a receiving organization or facility, in the event the patient is transferred. These policies and procedures should supplement existing medical record requirements and regulations. These policies and procedures should also be in compliance with the Health Insurance Portability and Accountability Act (HIPAA).

The *Medical Documentation* worksheet provides questions to consider for medical documentation policies and procedures.

*Effective 11/29/2019*
Volunteers

OPT/SLP organization policies and procedures should address emergency staffing strategies, including the use of organization volunteers and state and federally designated health care professionals, in the event of surge needs. OPT/SLP organizations may consider utilizing the Wisconsin Emergency Assistance Volunteer Registry (WEAVR) (more information is in the Health Professions Volunteer Use section) to recruit volunteers to meet medical surge needs. OPT/SLP organizations should consider any essential privileging and credentialing processes that may become relevant in emergency situations. Policies and procedures should also include a method for contacting off-duty staff or addressing staffing shortages caused by inability of staff to report to work.
Tools and Templates: Policies and Procedures

This section contains tools, templates, and resources that may be helpful for policies and procedures for the following subjects:

Evacuation and Sheltering in Place

Medical Documentation

Health Professions Volunteer Use
Evacuation and Sheltering in Place

Below are some questions to consider when developing policies and procedures pertaining to evacuation and sheltering in place. These questions are not exhaustive; instead, they are intended to initiate and facilitate a conversation around necessary aspects of the policies and procedures.

- What criteria are used to determine whether the organization will shelter in place or evacuate during an emergency?
- Who has decision-making authority to make this determination?
- What procedures will the organization use to determine which patients can be discharged versus moved to another facility?
- What procedures will the organization use to determine the order in which patients are evacuated?
- How will the treatment needs of patients be identified and addressed during evacuations?
- What evacuation procedures will be used for non-patients, e.g., staff and visitors?
- Which staff members have what responsibilities during the execution of evacuation procedures?
- How will transport of patients be arranged?
- How will you identify appropriate facilities to receive patients?
- How will organizations ensure that primary and alternate means of communicating with external partners about evacuation are in place?
Medical Documentation

Below are some questions to consider when developing policies and procedures pertaining to medical documentation. These questions are not exhaustive; instead, they are intended to initiate and facilitate a conversation around necessary aspects of the policies and procedures.

- What systems/policies/procedures exist to provide patient medical documentation on a day-to-day basis?
- Are there changes to these systems/policies/procedures in an emergency?
- How would medical documentation be transferred during an evacuation to accompany a patient to a receiving organization or facility?
- How are standards of confidentiality maintained?
- Where are these existing policies/procedures documented for the organization? Think about policies that have been developed to maintain compliance with HIPAA, Joint Commission, local and state law, etc.
- If electronic medical records are used, what redundant processes exist in case such systems are compromised (power outages, cyberattacks, etc.)?
- Who is responsible for activating redundant systems?
**Health Professions Volunteer Use**

WEAVR is the Wisconsin Emergency Assistance Volunteer Registry. WEAVR is a secure, web-based volunteer registration system for health care and behavioral health professionals. In an emergency, organizations can request that state public health officials send out a WEAVR request. Public health officials will identify appropriate individuals and contact potential volunteers. Volunteers who agree to help will be dispatched to the OPT/SLP organization’s location and informed of the role they need to fill. OPT/SLP organizations should understand how to use WEAVR before emergency situations arise. More information about WEAVR can be found on the DHS’ WEAVR web-page:

[https://www.dhs.wisconsin.gov/preparedness/weavr/index.htm](https://www.dhs.wisconsin.gov/preparedness/weavr/index.htm)
COMMUNICATION PLAN

OPT/SLP organizations should develop and maintain an emergency preparedness communication plan that complies with federal, state, and local laws. This communication plan should be reviewed and updated at least every two years.* The communication plan should include how the organization coordinates patient care within the organization, across health care providers, and with state and local public health departments. The communication plan should also include how the organization interacts and coordinates with emergency management agencies and systems to protect patients.

The communication plan should include the following elements:

**Contact Information**
The communication plan should include both names and contact information for the following internal assets of the organization:
- Staff
- Entities providing services under arrangement
- Patients’ physicians
- Other OPT/SLP organizations
- Volunteers

The communication plan should also include contact information for the following external resources:
- Federal, state, tribal, regional, and local emergency preparedness staff
- Other identified sources of assistance

Contact information should be readily available and accessible to leadership and staff. All contact information should be accurate and current.

Sample contact grids are included for the following contact types:

- *External Contact Information*
- *Staff Contact Information*
- *Patients’ Physicians’ Contact Information*
- *Volunteer Contact Information*

**Communications**
The OPT/SLP organization’s communications plans should include primary and alternate means for communicating with their staff and federal, state, tribal, regional, and local emergency management agencies. The communication plan should include when and how alternate communication methods are used and who uses them. Additionally, OPT/SLP organizations should ensure that their selected alternate method of communication is compatible with the communication systems of those they need to contact.

A sample grid for documenting primary and alternate means of communications can be found here: *Primary and Alternate Means of Communication.*

*Effective 11/29/2019*
**Release of Information**

Communications plans should include methods for a number of information sharing needs. OPT/SLP organizations should develop a method for sharing patient information and medical documentation with other providers to maintain continuity of care. Information necessary to provide patient care should be sent with evacuated patients or be readily available for patients who are sheltered in place. When patients are transferred, OPT/SLP organizations should send all necessary patient information that is readily available, including patient name, DOB, allergies, current medications, medical diagnoses, blood type, advance directives, and next of kin/emergency contacts.

OPT/SLP organizations should have HIPAA-compliant means to release patient information to family members and others in a timely and accurate fashion, in the event of an evacuation. Additionally, OPT/SLP organizations should develop HIPAA-compliant means of providing general information about the condition and location of patients that are in the OPT/SLP organization’s care. Though HIPAA requirements are not suspended during a national or public health emergency, the privacy rule does permit certain uses and disclosures of protected health information in emergency circumstances and for disaster relief purposes.

A decision flowchart for disclosing protected health information can be found in the [HIPAA Decision Flowchart](#).

**OPT/SLP Organization Information**

OPT/SLP organization communication plans should include a means for providing information on the OPT/SLP organization’s needs and ability to provide assistance to others. An OPT/SLP organization’s reported needs may include assistance with evacuation or transportation/transfer shortages. The communication plan should specifically include how the required information would be communicated.

This information should be provided to the authority with jurisdiction. The authority with jurisdiction varies by local, state, and federal emergency management structures as well as the nature of the emergency.

OPT/SLP organizations can develop a communication plan for conveying OPT/SLP organization information using questions to consider found in the [OPT/SLP Organization Information](#) section.
Tools and Templates: Communication Plan

This section contains tools, templates, and resources that may be helpful for communication plans:

- **External Contact Information**
- **Staff Contact Information**
- **Patients’ Physicians’ Contact Information**
- **Volunteers’ Contact Information**
- **Primary and Alternate Means of Communication**
- **HIPAA Decision Flowchart**
- **OPT/SLP Organization Information**
**External Contact Information**

This grid is an example of the type of tool OPT/SLP organizations may create to maintain information for external contacts. OPT/SLP organizations should keep contact information updated so that in an emergency event, the appropriate individual can be reached in a timely fashion. The purpose for reaching out to a given contact should be included, so it is clear who should be contacted for what reason in any given situation.

**Staff Contact Information**

This grid is an example of the type of tool OPT/SLP organizations may create to maintain contact information for staff. OPT/SLP organizations should be able to contact staff during emergencies. Reasons for contact may include cancelling shifts, determining which staff are actually on duty or on site, or reaching out to staff to help with surge needs. It should be decided whether roles for staff will be adjusted or increased during emergency events, and if so, those roles should be clarified and documented.

Volunteer Contact Information
This grid is an example of the type of tool OPT/SLP organizations may create to maintain contact information for volunteers. OPT/SLP organizations should be able to contact volunteers during emergencies. Reasons for contact may include cancelling shifts, determining which volunteers are actually on duty or on site, or reaching out to volunteers to help with surge needs. It should be decided whether roles for volunteers will be adjusted or increased during emergency events, and if so, those roles should be clarified and documented.

Primary and Alternate Means of Communication
This grid is an example of the type of tool OPT/SLP organizations may create to document primary and alternate means of communication with relevant individuals/partners. OPT/SLP organizations should have at least two methods of communicating with staff and relevant partners. The alternate method should be easily accessible, in the event that the primary method becomes unavailable, and should be agreeable to both the OPT/SLP organization and the entity they are communicating with. Primary and alternate methods of communication may vary based on who the OPT/SLP organization is trying to contact (for example, primary and alternate methods of communication may be different for staff than they are for state emergency management staff), but should be decided and documented before emergency events occur so that communication expectations are clear in emergency events.

**HIPAA Decision Flowchart**

HIPAA is not waived in emergency events, OPT/SLP organizations should be aware of the need to protect patient information at all times. However, certain information can be shared during emergency events if the protected health information is disclosed for public health emergency preparedness purposes. The At-A-Glance Disclosure Decision Flowchart (linked below) can help OPT/SLP organizations make choices about disclosing protected health information. If there is uncertainty about the appropriateness of disclosing information, OPT/SLP organizations should err on the side of caution or contact appropriate authorities for guidance.

**OPT/SLP Organization Information**

Below are some questions to consider when developing communication plans pertaining to sharing OPT/SLP organization information. These questions are not exhaustive; instead, they are intended to initiate and facilitate a conversation around necessary aspects of the communication plan.

- How does the organization determine which authorities to notify in the event of an emergency?
- How do the authorities vary in different types of emergency situations?
- How are occupancy levels communicated to local and state authorities during an emergency?
- How are supply and other needs communicated to local and state authorities during an emergency?
- How does the organization convey to local and state authorities their ability to help others?
- How might the means of communication differ depending on the emergency or the authorities being notified?
- What redundant means of communication exist for providing this information?
TRAINING AND TESTING

The OPT/SLP organization should develop and maintain an emergency preparedness training and testing program that is based on the risk assessments, emergency plan, policies and procedures, and communication plan. The training and testing program should be reviewed and updated at least every two years.*

Training should encompass the OPT/SLP organization’s provision of education and instruction to staff, contractors, and organization volunteers. Testing should operationalize training, and allow the OPT/SLP organization to evaluate the effectiveness of their training as well as the overall emergency preparedness program. Testing can include conducting drills and/or exercises to test the emergency plan and identify gaps or areas for improvement.

Training and testing can include, but is not limited to, how the OPT/SLP organization would communicate facility closure to required contacts, testing patient evacuation, or testing transportation procedures. For OPT/SLP organizations with multiple locations, the training and testing program should reflect the facility-based risk assessment for each specific location.

Training Program

OPT/SLPs should develop training programs that cover emergency preparedness policies and procedures. This training should be available during orientation for all new staff, individuals providing services under arrangement, and volunteers, and be consistent with their expected role in an emergency. Existing staff should also receive emergency preparedness training at least every two years.* Ideally, this training should be modified to reflect lessons learned from exercises and real world events. If the emergency preparedness policies and procedures are significantly updated, the OPT/SLP must conduct training on the updated policies and procedures.*

Though all staff should receive training, OPT/SLPs can decide what level of training each staff member should complete, based on their expected responsibilities in an emergency. OPT/SLPs may also determine that documented external training is sufficient to meet some or all of the OPT/SLP’s training requirements.

All emergency preparedness training should be documented and OPT/SLPs should be able to demonstrate staff knowledge of emergency preparedness program plans, policies, and procedures.* This documentation should include the specific training completed as well as the methods used to demonstrate knowledge of the training program.

Testing

OPT/SLPs must conduct exercises to test the emergency plan annually. OPT/SLPs must:

1. Participate in a full-scale exercise that is community based every 2 years; or
   a. When a community based exercise is not accessible, conduct an individual facility based functional exercise every 2 years; or
   b. If the OPT/SLP experiences a natural or man-made emergency that requires activation of the emergency plan, the OPT/SLP is exempt from engaging in its next required full scale community-

*Effective 11/29/2019
based exercise or individual facility-based functional exercise following the onset of the emergency event.

II. Conduct an additional exercise every 2 years, opposite the year the full-scale or functional exercise, that may include, but is not limited to the following:
   a. A second full-scale exercise that is community-based or a facility based functional exercise; or
   b. A mock disaster drill; or
   c. A tabletop exercise or workshop that is led by a facilitator and includes a group discussion using a narrated, clinically-relevant emergency scenario, a set of problem statements, directed messages, or prepared questions designed to challenge an emergency plan.*

III. Analyze the response to and maintain documentation of all drills, tabletop exercises, and emergency events and revise the hospice’s emergency plan, as needed.*

As required by this rule, full-scale exercises are defined as any operations-based exercise (drill, functional, or full-scale) that assesses an OPT/SLP’s operations and its given community. This is an operations-based exercise that typically involves multiple agencies, jurisdictions, and disciplines performing functional or operational elements. **Full-scale exercises, as defined in this regulation, are not synonymous with full-scale exercises as defined by FEMA or Department of Homeland Security Exercise and Evaluation Program (HSEEP).**

OPT/SLP organizations should maintain documentation of all drills, tabletop exercises, and emergency events. OPT/SLP organizations should also analyze their response to testing exercises and real world events, and revise their emergency program as appropriate. This analysis and revision can, in part, be accomplished through the completion of After Action Reports (AARs—link provided below). At a minimum, AARs should determine what was supposed to happen, what occurred, what went well, what the OPT/SLP organization can do differently or improve upon, and a plan with timelines for incorporating necessary improvements.

OPT/SLP organizations should consider their physical location, agency, other organization responsibilities, and the needs of the community when planning or participating in exercises. Often, emergency preparedness entities, such as healthcare emergency readiness coalitions, may conduct annual, full-scale, community-based exercises to assess community-wide response. OPT/SLP organizations should actively engage the HERCs to identify potential opportunities to participate in exercises. These exercises give OPT/SLP organizations the opportunity to assess their emergency plan, and better understand how they can contribute to, coordinate with, and integrate into the broader community’s response during an emergency. They also provide an opportunity to assess communication plans and engagement with external partners. OPT/SLP organizations should contact their HERC to identify opportunities and assess whether participation in the HERC exercise fulfills the OPT/SLP organization’s CMS requirements. HERCs do not have the resources to fulfill individual OPT/SLP organization requirements and consequently only serve to connect OPT/SLP organizations to broader community engagement and coordination. OPT/SLP organizations are responsible for ensuring and documenting that their participation in HERC exercises meets the requirements expected by CMS.

The following tools and templates are included:

- Exercise Design Checklist
- Exercise Evaluation Guide

*Effective 11/29/2019
Tools and Templates: Training and Testing
This section contains tools, templates, and resources that may be helpful for training and testing:

Exercise Design Checklist

Exercise Evaluation Guide

After Action Report/Improvement Plan Instructions and Template
Exercise Design Checklist
The Exercise Design Checklist document (linked below) provides a sample checklist for designing exercises. The document leads users through the necessary steps for exercise design and can be used to document the planning and development of exercises. The first section of the checklist includes consideration of the type of exercise, the exercise scenario, the main objectives (target capabilities/critical areas) to be evaluated during the exercise, the levels of activity to be included in the exercise, who will participate in the exercise, which organizations/agencies will be involved in the exercise, and when the exercise will occur. The second section of the checklist includes consideration of communications, resources, safety and security, staff roles and responsibilities, utilities, and patient care. The following sections guide exercise designers through identifying players’ expected actions, developing a purpose statement, writing the narrative for the exercise, identifying major and detailed events in chronological order, and completing the after action report and improvement plan.

https://www.dhs.wisconsin.gov/library/exercise-design-checklist.htm

Exercise Evaluation Guide
The Exercise Evaluation Guide (linked below) is a blank document. The content and layout can be amended as is appropriate, but it is designed to help OPT/SLP organizations assess their exercises. The guide includes areas for evaluating numerous activities included in a single exercise. Expected observations can be entered ahead of time. After the exercise, evaluators can assess whether expectations were observed and the extent to which expectations were completed or met. OPT/SLP organizations can complete this exercise evaluation guide as part of their AAR, to assess areas of strength and weakness.

After Action Report/Improvement Plan Instructions and Template
After Action Reports and Improvement Plans (IPs) are important parts of emergency preparedness testing. AARs help organizations assess their response to emergency events, whether simulated during an exercise, or real-world. AARs review the exercise design and execution, and provide an assessment of what went well and what needs to be improved upon. IPs specifically outline how and when improvements will be made to address shortcomings identified by the exercise evaluation and AAR.

The CMS AAR/IP instructions document walks through developing an AAR and IP. The document includes a purpose statement and background information on emergency preparedness. Additionally, the document contains explanations of key terms and important capabilities. It is important to note that this AAR/IP instruction document is based on the U.S. Department of Homeland Security Exercise and Evaluation Program (HSEEP). Though OPT/SLP organizations may choose to use HSEEP to meet exercise requirements for the CMS rule, it is essential to understand that the expectations for HSEEP and the CMS rule are not the same in regard to emergency preparedness testing. OPT/SLP organizations should always ensure that their exercises and other testing activities meet the requirements of the CMS rule.

*Effective 11/29/2019
The CMS AAR/IP template document can be used to complete an AAR and IP. The document contains blank sections with instructions on how to fill out essential components in italics. The template covers the executive summary, exercise overview, exercise design summary, improvement plan, and conclusion. The template also contains five appendices: acronyms, lessons learned (optional), participant feedback summary (optional), exercise events synopsis (optional), and exercise events summary table (optional). OPT/SLP organizations may use, modify, and customize this document as is appropriate for their organization. However, if an OPT/SLP organization wishes to conduct an exercise compliant with the Hospital Preparedness Program (HPP) and HSEEP requirements, the template sections must not be modified and each section (excluding those marked optional) must be completed entirely. OPT/SLP organizations wishing to ensure compliance with the HPP and HSEEP should assess whether their testing program meets the CMS rule requirements. If OPT/SLP organizations determine they are not meeting conditions of participation with this template as is, they may consider completing a second AAR/IP that is compliant with the CMS regulations.

*Effective 11/29/2019
ADDITIONAL REQUIREMENTS

**Integrated Health Care Systems**

If an OPT/SLP organization is part of a health care system consisting of multiple separately certified health care facilities that elects to have a unified and integrated emergency preparedness program, the OPT/SLP organization may choose to participate in the health care system’s coordinated emergency preparedness program. If elected, the unified and integrated emergency preparedness program should:

- Demonstrate that each separately certified organization or facility within the system actively participated in the development of the unified and integrated emergency preparedness program.
- Be developed and maintained in a manner that takes into account each separately certified organization or facility’s unique circumstances, patient populations, and services offered.
- Demonstrate that each separately certified organization or facility is capable of actively using the unified and integrated emergency preparedness program and is in compliance with the program.
- Include a unified and integrated emergency plan that meets all aforementioned requirements. The unified and integrated emergency plan should also be based on and include the following:
  - A documented community-based risk assessment, utilizing an all-hazards approach.
  - A documented individual facility-based risk assessment for each separately certified organization or facility within the health system, utilizing an all-hazards approach.
- Include integrated policies and procedures, a coordinated communication plan, and training and testing programs that meet the aforementioned requirements.

The health care system’s unified emergency preparedness program should be updated each time an organization or facility leaves or enters the health care system’s program. The integrated program should demonstrate that each separately certified organization or facility included in the program actively participated in the program’s development, and each organization or facility should designate personnel to collaborate with the health care system to develop the plan. This participation should be documented. All components of the emergency preparedness program that are reviewed annually should include all participating organizations and facilities, and each organization or facility should be able to prove that it was involved in annual reviews and updates.

DEFINITIONS

These definitions reflect those provided by CMS in the Interpretive Guidance for the Emergency Preparedness regulation.

All-Hazards Approach
An all-hazards approach is an integrated approach to emergency preparedness that focuses on identifying hazards and developing emergency preparedness capacities and capabilities that can address those as well as a wide spectrum of emergencies or disasters. This approach includes preparedness for natural, manmade, and organization or facility emergencies that may include but is not limited to: care-related emergencies; equipment and power failures; interruptions in communications, including cyber attacks; loss of a portion or all of a facility; and interruptions in the normal supply of essentials, such as water and food. All organizations and facilities must develop an all-hazards emergency preparedness program and plan.

Disaster
A hazard impact causing adverse physical, social, psychological, economic, or political effects that challenge the ability to respond rapidly and effectively. Despite a stepped-up capacity and capability (call-back procedures, mutual aid, etc.) and change from routine management methods to an incident command/management process, the outcome is lower than expected compared with a smaller scale or lower magnitude impact (see “emergency” for important contrast between the two terms).

Emergency
A hazard impact causing adverse physical, social, psychological, economic, or political effects that challenge the ability to respond rapidly and effectively. It requires a stepped-up capacity and capability (call-back procedures, mutual aid, etc.) to meet the expected outcome and commonly requires change from routine management methods to an incident command process to achieve the expected outcome (see “disaster” for important contrast between the two terms).

Emergency/Disaster
An event that can affect the organization or facility internally as well as the overall target population or the community at large or community or a geographic area.

Emergency Plan
An emergency plan provides the framework for the emergency preparedness program. The emergency plan is developed based on facility- and community-based risk assessments that assist an organization or facility in anticipating and addressing facility, patient, staff, and community needs and support continuity of business operations.

*Effective 11/29/2019
Emergency Preparedness Program
The Emergency Preparedness Program describes an organization or facility’s comprehensive approach to meeting the health, safety and security needs of the organization or facility, its staff, their patient population, and community prior to, during, and after an emergency or disaster. The program encompasses four core elements: an emergency plan that is based on a risk assessment and incorporates an all-hazards approach, policies and procedures, communication plan, and the training and testing program.

Facility-Based
We consider the term “facility-based” to mean the emergency preparedness program is specific to the organization or facility. It includes but is not limited to hazards specific to a facility based on its geographic location; dependent patient/resident/client and community population, facility type, and potential surrounding community assets, i.e., rural area versus a large metropolitan area.

Full-Scale Exercise
A full scale exercise is an operations-based exercise that typically involves multiple agencies, jurisdictions, and disciplines performing functional (for example, joint field office, emergency operation centers) and integration of operational elements involved in the response to a disaster event, i.e., “boots on the ground” response activities (for example, hospital staff treating mock patients).

Risk Assessment
The term risk assessment describes a process organizations and facilities use to assess and document potential hazards that are likely to impact their geographical region, community, facility, and patient population and identify gaps and challenges that should be considered and addressed in developing the emergency preparedness program. The term risk assessment is meant to be comprehensive and may include a variety of methods to assess and document potential hazards and their impacts. The health care industry has also referred to risk assessments as a hazard vulnerability assessment or analysis (HVA) as a type of risk assessment commonly used in the health care industry.

Staff
The term "staff" refers to all individuals that are employed directly by an organization or facility. The phrase "individuals providing services under arrangement" means services furnished under arrangement that are subject to a written contract conforming with the requirements specified in section 1861(w) of the Act.

Table-top Exercise (TTX)
A tabletop exercise involves key personnel discussing simulated scenarios in an informal setting. TTXs can be used to assess plans, policies, and procedures. A tabletop exercise is a discussion-based exercise that involves senior staff, elected or appointed officials, and other key decision-making personnel in a group discussion centered on a hypothetical scenario. TTXs can be used to assess plans, policies, and procedures without deploying resources.
