*Effective 11/29/2019

In September 2016, the Centers for Medicare & Medicaid Services (CMS) released a new emergency preparedness rule for 17 sectors of the U.S. health care system. The new rule asks the affected provider types to demonstrate that they are doing risk assessments; writing appropriate plans, policies and procedures; and training and testing their plans with staff and partners in the community.

One of the resources CMS suggests providers can seek out to assist them are the regional health emergency readiness coalitions (HERCs). In Wisconsin, we have seven of these coalitions. The memberships of these coalitions—which include hospitals, emergency medical services, public health agencies, emergency management agencies, and a range of other partners—plan, train, and exercise together to be ready to support one another in large-scale emergencies. We invite you to reach out to your region’s coordinator, if you haven’t already, to find out more. A map of the regions and a link to the current contact information for their coordinators can be found on the next page.

Each of these toolkits gives facilities that fall under the new rule an overview of the requirements for their provider type, as well as some sample templates that can be used in their planning efforts. In topic areas where there wasn’t a tool or template readily available, the toolkit offers planning worksheets that feature a list of example questions to help facilities think through relevant issues that can help them draft their plans and policies.

As you may be aware, the Division of Quality Assurance (DQA, another part of the Wisconsin Department of Health Services), is the state survey agency that oversees Wisconsin’s certification process on behalf of CMS. While DQA has provided our staff with information and background on the CMS rule, our provider toolkits were produced independently and are intended for advisory purposes only. None of the tools or assistance provided by our office or the regional healthcare coalitions guarantees any outcome during survey visits. Facilities are solely responsible for meeting CMS requirements.

We wish you success in your efforts to enhance your readiness to protect your patients, clients, residents, their families, and your staff during emergency situations, and hope the contents of this toolkit help you on your way!

Best Wishes,

Dave Rozell

David W. Rozell, MPH
Health Emergency Preparedness Section Chief
Office of Preparedness and Emergency Health Care
Wisconsin Department of Health Services

*Effective 11/29/2019
WISCONSIN’S HEALTHCARE EMERGENCY READINESS COALITIONS (HERC)

Below is a map of the regional healthcare coalitions in Wisconsin. Contact information for coalition leaders is provided in the Healthcare Coalition Regional Contact document. [https://www.dhs.wisconsin.gov/publications/p02587.pdf](https://www.dhs.wisconsin.gov/publications/p02587.pdf). Questions about the federal regulation for emergency preparedness can be directed to your regional HERC coordinator.

In addition, the HERC Emergency Preparedness website can provide links to regional websites, answers, and updates on many emergency preparedness topics: [https://www.dhs.wisconsin.gov/preparedness/hospital/index.htm](https://www.dhs.wisconsin.gov/preparedness/hospital/index.htm)

*Effective 11/29/2019*
OVERVIEW

General Information
On September 16, 2016, the Centers for Medicare & Medicaid Services (CMS) published new federal regulations that included updated emergency preparedness requirements for providers and suppliers participating in Medicare and Medicaid. For provider-specific text or a link to the full text regulation, see Appendix A: Federal Regulation. These requirements fall under new conditions of participation/conditions for coverage; if these requirements are not met, providers and suppliers risk citation and consequent loss of Medicare or Medicaid reimbursement. The regulation went into effect on November 15, 2016, and must be implemented by November 15, 2017.

NOTE (3.6.19): CMS published an updated Interpretive Guidelines, see Appendix Z, on February 1, 2019.

Seventeen provider and supplier types receiving Medicare or Medicaid reimbursement are affected by the CMS emergency preparedness rule. The provider and supplier types are:

- Ambulatory surgical centers
- Clinics and rehabilitation agencies, and public health agencies as providers of outpatient physical therapy and speech-language pathology services
- Community mental health centers
- Comprehensive outpatient rehabilitation facilities
- Critical access hospitals
- End-stage renal disease facilities
- Home health agencies
- Hospices (inpatient and outpatient)
- Hospitals
- Intermediate care facilities for individuals with intellectual disabilities
- Long-term care (skilled nursing facilities)
- Organ procurement organizations
- Programs of all inclusive care for the elderly
- Psychiatric residential treatment facilities
- Religious nonmedical health care institutions
- Rural health clinics and federally qualified health clinics
- Transplant centers

The regulation requires affected providers and suppliers to comply with all applicable federal, state, and local emergency preparedness requirements. The regulation also requires providers and suppliers to develop and maintain a comprehensive emergency preparedness program, utilizing an all-hazards approach that includes, but is not limited to, the following domains:

- Risk Assessment and Planning: Develop an emergency preparedness plan based on facility and community risk assessments and utilizing an all-hazards approach; address patient populations, services offered for continuity of operations, and succession plans.
- Policies and Procedures: Develop emergency preparedness policies and procedures based on the risk assessment, emergency plan, and communication plan; address subsistence needs, patient tracking, evacuation, sheltering in place, protection of medical documentation, and arrangements with other providers in the event of patient transfer.

*Effective 11/29/2019*
• **Communication Plan:** Develop an emergency preparedness communication plan that complies with federal, state, and local laws; include contact information for relevant partners, methods to share protected patient information, and primary and alternate means of communication.

• **Training and Testing:** Develop an emergency preparedness training and testing program based on the risk assessment, emergency plan, and communication plan; provide annual training and testing on emergency preparedness policies and procedures.*

A number of the CMS regulations line up with current accreditation standards for various accrediting bodies. A crosswalk for the rule and current accreditation standards can be found in *Appendix B: Emergency Preparedness Regulations Crosswalk.*
Using This Toolkit
This toolkit provides information on the CMS Emergency Preparedness rule for Home Health Agencies (HHAs). There are four major content sections: Risk Assessment and Planning, Policies and Procedures, Communication Plan, and Training and Testing. The content sections contain detailed information about the given portion of the rule.

At the end of each of the four content sections, there is a subsection titled Tools and Templates. The Tools and Templates subsection contains relevant tools, templates, and resources for the given section. These tools, templates, and resources are mentioned in the content portion of each section, and are linked to the tools and templates subsection for further explanation and provision.

The sections following the four content sections include additional requirements that may be applicable to the provider type; pertinent resources; definitions; acronyms; and the appendices.
RISK ASSESSMENT AND PLANNING

HHAs should develop and maintain an emergency preparedness plan that is reviewed and updated at least every two years*. A checklist that can help HHAs in emergency preparedness planning can be found here: Emergency Preparedness Planning Checklist. HHAs should have an emergency plan that includes, at the least, the following elements:

**Risk Assessment**
HHAs should base their emergency plan on documented facility-based and community-based risk assessments, using an all-hazards approach. An all-hazards approach integrates response and focuses on capacities and capabilities that support preparedness for a spectrum of emergencies. The all-hazards approach does account for location; all-hazards planning does not address any specific potential threat, but promotes an agency’s readiness to respond to a broad range of applicable emergencies. Agencies may use community-based risk assessments developed by other entities, but should have a copy of the risk assessment and ensure their emergency plan is in alignment with the community-based risk assessment. Additionally, the emergency plan should include strategies to address the emergencies identified by the risk assessments.

One source of community-based risk assessments is an agency’s Healthcare Emergency Readiness Coalition: Wisconsin’s Healthcare Coalitions. A template for conducting a Facility-based Hazard Vulnerability Assessment (HVA) has also been provided.

**Continuity of Operations**
HHA emergency plans should address their patient population, including at-risk patients; services provided in emergencies; and continuity of operations, including delegations of authority and succession plans. HHAs need to identify and plan for patients who may require additional assistance. Additionally, HHAs should identify staff roles as necessitated by the emergency, through succession planning and clear delegations of authority. At the least, HHAs should identify a qualified individual who is authorized in writing to act in the absence of the administrator or person legally responsible for the operations of the facility. Continuity of operations plans should include facility- and community-based risk assessments and identify essential personnel, essential functions, and critical resources. These plans should also describe how the facility will protect vital records and IT data, as well as identify and locate alternate facilities and financial resources as needed.

Examples of useful continuity of operations tools include:
Emergency Operations Plan Activation
Essential Services Roles and Responsibilities

**Cooperation and Collaboration**
In the development of an emergency plan, HHAs should include a process for cooperation with local, tribal, regional, state, and federal emergency preparedness officials’ efforts to maintain an integrated response during a disaster or emergency situation. HHAs are no longer* required to include documentation of their efforts to contact such officials. However, when HHAs are able to participate in cooperative planning efforts, documentation of that participation is recommended.

*Effective 11/29/2019
The *Collaboration Contact Grid* provides a template for documenting emergency preparedness contacts.
Tools and Templates: Risk Assessment and Planning
This section contains tools, templates, and resources that may be helpful for risk assessment and planning. Included are the:

Emergency Preparedness Planning Checklist

Facility-Based HVA

Emergency Operations Plan Activation

Essential Services Roles and Responsibilities

Collaboration Contact Grid
Emergency Preparedness Planning Checklist
The Emergency Preparedness Checklist is located on the CMS Survey and Certification website. This checklist can help HHAs in emergency preparedness planning. The checklist reviews major topics that emergency preparedness programs should address, and provides information on details related to those topics. This can be an important tool for tracking progress on creating an emergency preparedness plan.

Facility-Based HVA
HVAs are a systematic approach to identifying potential hazards that might affect an organization. Vulnerability is determined by assessing risk associated with each hazard and analyzing assessment findings to create a prioritized comparison of hazard vulnerabilities. The vulnerability is related to both the impact on organizational and community function and the likely demands the hazard would create. The tools at the following website can be used to conduct a facility-based hazard vulnerability assessment for HHAs.
https://www.calhospitalprepare.org/hazard-vulnerability-analysis

Emergency Operations Plan Activation
The following grid is an example of the type of tool HHAs may create to document a chain of responsibility for activating emergency operations plans. Individuals selected would be responsible for assessing emergent situations and activating the emergency operations plan when appropriate.

<table>
<thead>
<tr>
<th>Individuals Responsible for Emergency Operations Plan Activation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Name</td>
</tr>
<tr>
<td>Primary</td>
</tr>
<tr>
<td>Backup 1</td>
</tr>
<tr>
<td>Backup 2</td>
</tr>
</tbody>
</table>

*Effective 11/29/2019*
### Essential Services Roles and Responsibilities

This grid is an example of a tool HHAs may create to track roles and responsibilities for essential services during emergency events. Services identified should be essential during emergencies. Roles and responsibilities for identified services should be clearly stated, and individuals providing these services should be aware of their responsibilities. A primary and secondary point of contact should be established for each service, so that in the case of an emergency, the service can be activated and coordinated appropriately.

<table>
<thead>
<tr>
<th>Essential Services</th>
<th>Roles and Responsibilities</th>

<td></td>
</tr>
</tbody>
</table>
**Collaboration Contact Grid**

The following grid can be completed and retained for the purpose of collaborating with appropriate local, tribal, regional, state, and federal emergency preparedness partners. These contacts can be resources during emergency preparedness program development and evaluation, and during real-world emergencies. Using an all-hazards approach to emergency preparedness, HHAs should have the ability to communicate with all relevant partners, if necessary. However, during an emergency, agencies should prioritize communication with those entities with an immediate response role such as local public health, local emergency management, and their regional healthcare coalition.

*Effective 11/29/2019*
POLICIES AND PROCEDURES

HHAs should develop and implement emergency preparedness policies and procedures that are based on their risk assessment, emergency plan, and communication plan. These policies and procedures should be reviewed and updated at least every two years.* HHAs may choose whether to incorporate emergency policies and procedures into their emergency plan or to include policies and procedures into their standard operating procedures/operations manual. However, the emergency plan and policies and procedures should always be easily accessible, and it is recommended that they be co-located.

At a minimum, the emergency preparedness policies and procedures for HHAs should address the following elements:

**Individual Emergency Plans**

HHAs’ policies and procedures should include the plans for the HHA’s patients during a natural or manmade disaster. Individual plans for each patient must be included as part of the comprehensive patient assessment. The individualized emergency plan should be in writing. HHAs have discretion as to what these emergency plans may look like; individualized emergency plans may be as simple as a detailed emergency card that is kept with patients. HHAs should document that these discussions with patients occurred and retain a copy of each patient’s individualized emergency plan in the patient’s file, as well as provide a copy to the patient and/or their caregiver.

A worksheet with questions to consider for individual emergency plan policies and procedures may be found here: Individual Emergency Plans.

**Patient and Staff Follow Up**

HHAs should develop policies and procedures to follow up with on-duty staff and patients to determine services that are needed in the event that there is an interruption in services during or due to an emergency. The HHA must inform state and local officials of any on-duty staff or patients they are unable to contact. The information regarding patient services that is needed during or after an interruption in services, and regarding on-duty staff and patients the HHA is unable to contact, must be readily available, accurate, and shareable among officials within and across the emergency response system.

A sample contact grid for staff can be found here: Sample Staff Follow Up Grid.
A sample contact grid for patients can be found here: Sample Patient Follow Up Grid.
A sample contact grid for local and state officials can be found here: Sample State and Local Officials Contact Grid.

**Evacuation Needs**

HHAs should develop policies and procedures to inform state and local officials about HHA patients in need of evacuation from their residence at any time due to an emergency situation, based on the patient’s medical and psychiatric condition and home environment. These policies and procedures should address when and how this information is communicated to emergency officials and the clinical care needed for these patients. Appropriate

*Effective 11/29/2019
information to facilitate the patient’s evacuation and transportation should be included, such as whether or not the patient is mobile, what type of life-saving equipment the patient requires, if the life-saving equipment can be transported, or whether the patient has special needs. Since such policies and procedures would include protected health information of patients, HHAs should ensure their policies and procedures comply with the Health Insurance Portability and Accountability Act (HIPAA).

A sample contact grid for local and state officials may be found here: Sample State and Local Officials Contact Grid.

### Medical Documentation
Emergency policies and procedures should include a system of medical documentation that is readily available while protecting the confidentiality of patient information. The system of medical documentation should support continuity of care, whether in the affected HHA or in a receiving facility, in the event the patient is transferred. These policies and procedures should supplement existing medical record requirements and regulations. These policies and procedures should also be in compliance with the Health Insurance Portability and Accountability Act (HIPAA).

The Medical Documentation worksheet provides questions to consider for medical documentation policies and procedures.

### Volunteers
HHA policies and procedures should address emergency staffing strategies, including the use of facility volunteers and state and federally designated health care professionals, in the event of surge needs. HHAs may consider utilizing the Wisconsin Emergency Assistance Volunteer Registry (WEAVR) (more information is in the Health Professions Volunteer Use section) to recruit volunteers to meet medical surge needs. HHAs should consider any essential privileging and credentialing processes that may become relevant in emergency situations. Policies and procedures should also include a method for contacting off-duty staff or addressing staffing shortages caused by inability of staff to report to work.
**Tools and Templates: Policies and Procedures**

This section contains tools, templates, and resources that may be helpful for policies and procedures for the following subjects:

*Individual Emergency Plans*

*Sample Staff Follow Up Grid*

*Sample Patient Follow Up Grid*

*Sample State and Local Officials Contact Grid*

*Medical Documentation*

*Health Professions Volunteer Use*
Individual Emergency Plans

Below are some questions to consider when developing policies and procedures relating to individual emergency plans. These questions are not exhaustive; instead, they are intended to initiate and facilitate a conversation around necessary aspects of the policies and procedures.

Questions for consideration:

Does your comprehensive patient assessment include development of an individual emergency plan?

Does a template or form exist for this purpose?

If not, how will such a process take place so information is captured in written form?

How will planning discussions address possible disasters the patient may face within the home (e.g., fire, floods, tornados)?

How will recommendations to patients vary based on the type of emergency being experienced?

What information does your agency believe the individual emergency plan should include (e.g., specific patient information; agency contact information to use in an emergency; additional emergency community contact information; roles and responsibilities of the patient and the agency during an emergency)?

How will the agency track and document that these consultations have taken place?

Where will copies of individual emergency plans be collected and maintained?
Sample Staff Follow-Up Grid

This grid is an example of a follow-up grid HHAs may create to follow up with on-duty staff. HHAs should be able to contact on-duty staff in a timely manner during emergency events. HHAs should maintain updated contact information for staff and include multiple ways to reach them.

*Effective 11/29/2019*
Medical Documentation

Below are some questions to consider when developing policies and procedures pertaining to medical documentation. These questions are not exhaustive; instead, they are intended to initiate and facilitate a conversation around necessary aspects of the policies and procedures.

- What systems/policies/procedures exist to provide patient medical documentation on a day-to-day basis?
- Are there changes to these systems/policies/procedures in an emergency?
- How would medical documentation be transferred during an evacuation to accompany a patient to a receiving facility?
- How are standards of confidentiality maintained?
- Where are these existing policies/procedures documented for the facility? Think about policies that have been developed to maintain compliance with HIPAA, Joint Commission, local and state law, etc.
- If electronic medical records are used, what redundant processes exist in case such systems are compromised (power outages, cyberattacks, etc.)?
- Who is responsible for activating redundant systems?
Health Professions Volunteer Use
WEAVR is the Wisconsin Emergency Assistance Volunteer Registry. WEAVR is a secure, web-based volunteer registration system for health care and behavioral health professionals. In an emergency, agencies can request that state public health officials send out a WEAVR request. Public health officials will identify appropriate individuals and contact potential volunteers. Volunteers who agree to help will be dispatched to the HHA’s location and informed of the role they need to fill. HHAs should understand how to use WEAVR before emergency situations arise. More information about WEAVR can be found on the DHS’ WEAVR web-page:

https://www.dhs.wisconsin.gov/preparedness/weavr/index.htm
COMMUNICATION PLAN

HHAs should develop and maintain an emergency preparedness communication plan that complies with federal, state, and local laws. This communication plan should be reviewed and updated at least every two years.* The communication plan should include how the facility coordinates patient care within the facility, across health care providers, and with state and local public health departments. The communication plan should also include how the facility interacts and coordinates with emergency management agencies and systems to protect patients.

The communication plan should include the following elements:

**Contact Information**

The communication plan should include both names and contact information for the following internal assets of the agency:

- Staff
- Entities providing services under arrangement
- Patients’ physicians
- Volunteers

The communication plan should also include contact information for the following external resources:

- Federal, state, tribal, regional, and local emergency preparedness staff
- Other identified sources of assistance

Contact information should be readily available and accessible to leadership and staff. All contact information should be accurate and current.

Sample contact grids are included for the following contact types:

- External Contact Information
- Staff Contact Information
- Patients’ Physicians’ Contact Information
- Volunteer Contact Information

**Communications**

The HHA’s communications plans should include primary and alternate means for communicating with their staff and federal, state, tribal, regional, and local emergency management agencies. The communication plan should include when and how alternate communication methods are used and who uses them. Additionally, HHAs should ensure that their selected alternate method of communication is compatible with the communication systems of those they need to contact.

A sample grid for documenting primary and alternate means of communications can be found here: Primary and Alternate Means of Communication.

*Effective 11/29/2019*
**Release of Information**

Communications plans should include methods for a number of information sharing needs. HHAs should develop a method for sharing patient information and medical documentation with other providers to maintain continuity of care. Information necessary to provide patient care should be sent with patients or be readily available for patients who are sheltered in residence. When patients are evacuated, HHAs should send all necessary patient information that is readily available, including patient name, DOB, allergies, current medications, medical diagnoses, blood type, advance directives, and next of kin/emergency contacts.

HHAs should have HIPAA-compliant means to release patient information to family members and others in a timely and accurate fashion, in the event of an evacuation. Additionally, HHAs should develop HIPAA-compliant means of providing general information about the condition and location of patients that are in the HHA’s care. Though HIPAA requirements are not suspended during a national or public health emergency, the privacy rule does permit certain uses and disclosures of protected health information in emergency circumstances and for disaster relief purposes.

A decision flowchart for disclosing protected health information can be found in the [HIPAA Decision Flowchart](https://example.com).

**HHA Information**

HHA communication plans should include a means for providing information on the HHA’s occupancy, needs, and ability to provide assistance to others. An HHA’s reported needs may include shortage of provisions, assistance with evacuation, or transportation/transfer shortages. The communication plan should specifically include how the required information would be communicated.

This information should be provided to the authority with jurisdiction. The authority with jurisdiction varies by local, state, and federal emergency management structures as well as the nature of the emergency.

HHAs can develop a communication plan for conveying HHA information using the questions to consider found in the [HHA Information](#) section.
**Tools and Templates: Communication Plan**

This section contains tools, templates, and resources that may be helpful for communication plans:

- *HHA Information*
**External Contact Information**

This grid is an example of the type of tool HHAs may create to maintain information for external contacts. HHAs should keep contact information updated so that in an emergency event, the appropriate individual can be reached in a timely fashion. The purpose for reaching out to a given contact should be included, so it is clear who should be contacted for what reason in any given situation.

**Staff Contact Information**
This grid is an example of the type of tool HHAs may create to maintain contact information for staff. HHAs should be able to contact staff during emergencies. Reasons for contact may include cancelling shifts, determining which staff are actually on duty or on site, or reaching out to staff to help with surge needs. It should be decided whether roles for staff will be adjusted or increased during emergency events, and if so, those roles should be clarified and documented.

Primary and Alternate Means of Communication

This grid is an example of the type of tool HHAs may create to document primary and alternate means of communication with relevant individuals/partners. HHAs should have at least two methods of communicating with staff and relevant partners. The alternate method should be easily accessible, in the event that the primary method becomes unavailable, and should be agreeable to both the HHA and the entity they are communicating with. Primary and alternate methods of communication may vary based on who the HHA is trying to contact (for example, primary and alternate methods of communication may be different for staff than they are for state emergency management staff), but should be decided and documented before emergency events occur so that communication expectations are clear in emergency events.

*Effective 11/29/2019*
HIPAA Decision Flowchart

HIPAA is not waived in emergency events, HHAs should be aware of the need to protect patient information at all times. However, certain information can be shared during emergency events if the protected health information is disclosed for public health emergency preparedness purposes. The At-A-Glance Disclosure Decision Flowchart (linked below) can help HHAs make choices about disclosing protected health information. If there is uncertainty about the appropriateness of disclosing information, HHAs should err on the side of caution or contact appropriate authorities for guidance.

HHA Information

Below are some questions to consider when developing communication plans pertaining to sharing HHA information. These questions are not exhaustive; instead, they are intended to initiate and facilitate a conversation around necessary aspects of the communication plan.

- How does the facility determine which authorities to notify in the event of an emergency?
- How do the authorities vary in different types of emergency situations?
- How are occupancy levels communicated to local and state authorities during an emergency?
- How are supply and other needs communicated to local and state authorities during an emergency?
- How does the facility convey to local and state authorities their ability to help others?
- How might the means of communication differ depending on the emergency or the authorities being notified?
- What redundant means of communication exist for providing this information?
TRAINING AND TESTING

The HHA should develop and maintain an emergency preparedness training and testing program that is based on the risk assessments, emergency plan, policies and procedures, and communication plan. The training and testing program should be reviewed and updated at least every two years.*

Training should encompass the HHA’s provision of education and instruction to staff, contractors, and facility volunteers. Testing should operationalize training, and allow the HHA to evaluate the effectiveness of their training as well as the overall emergency preparedness program. Testing can include conducting drills and/or exercises to test the emergency plan and identify gaps or areas for improvement.

**Training Program**

HHAs should develop training programs that cover emergency preparedness policies and procedures. This training should be available during orientation for all new staff, individuals providing services under arrangement, and volunteers, and be consistent with their expected role in an emergency. Existing staff should also receive emergency preparedness training at least every two years.* Ideally, this training should be modified to reflect lessons learned from exercises and real world events. If the emergency preparedness policies and procedures are significantly updated, the HHA must conduct training on the updated policies and procedures.*

Though all staff should receive training, HHAs can decide what level of training each staff member should complete, based on their expected responsibilities in an emergency. HHAs may also determine that documented external training is sufficient to meet some or all of the HHA’s training requirements.

All emergency preparedness training should be documented and HHAs should be able to demonstrate staff knowledge of emergency preparedness program plans, policies, and procedures.* This documentation should include the specific training completed as well as the methods used to demonstrate knowledge of the training program.

**Testing**

HHAs must conduct exercises to test the emergency plan annually. HHAs must:

I. Participate in a full-scale exercise that is community based every 2 years; or
   a. When a community based exercise is not accessible, conduct an individual facility based functional exercise every 2 years; or
   b. If the HHA experiences a natural or man-made emergency that requires activation of the emergency plan, the HHA is exempt from engaging in its next required full scale community-based exercise or individual facility-based functional exercise following the onset of the emergency event.

II. Conduct an additional exercise every 2 years, opposite the year the full-scale or functional exercise, that may include, but is not limited to the following:
   a. A second full-scale exercise that is community-based or a facility based functional exercise; or
   b. A mock disaster drill; or
   c. A tabletop exercise or workshop that is led by a facilitator and includes a group discussion using a narrated, clinically-relevant emergency scenario, a set of problem statements, directed messages, or prepared questions designed to challenge an emergency plan.*

*Effective 11/29/2019
III. Analyze the response to and maintain documentation of all drills, tabletop exercises, and emergency events and revise the hospice’s emergency plan, as needed.*

As required by this rule, full-scale exercises are defined as any operations-based exercise (drill, functional, or full-scale) that assesses an HHA’s operations and its given community. This is an operations-based exercise that typically involves multiple agencies, jurisdictions, and disciplines performing functional or operational elements. Full-scale exercises, as defined in this regulation, are not synonymous with full-scale exercises as defined by FEMA or Department of Homeland Security Exercise and Evaluation Program (HSEEP).

HHAs should maintain documentation of all drills, tabletop exercises, and emergency events. HHAs should also analyze their response to testing exercises and real world events, and revise their emergency program as appropriate. This analysis and revision can, in part, be accomplished through the completion of After Action Reports (AARs—link provided below). At a minimum, AARs should determine what was supposed to happen, what occurred, what went well, what the HHA can do differently or improve upon, and a plan with timelines for incorporating necessary improvements.

HHAs should consider their physical location, agency, other facility responsibilities, and the needs of the community when planning or participating in exercises. Often, emergency preparedness entities, such as healthcare coalitions, may conduct annual, full-scale, community-based exercises to assess community-wide response. HHAs should actively engage the HERCs to identify potential opportunities to participate in exercises. These exercises give HHAs the opportunity to assess their emergency plan, and better understand how they can contribute to, coordinate with, and integrate into the broader community’s response during an emergency. They also provide an opportunity to assess communication plans and engagement with external partners. HHAs should contact their HERC to identify opportunities and assess whether participation in the HERC exercise fulfills the HHA’s CMS requirements. HERCs do not have the resources to fulfill individual HHA requirements and consequently only serve to connect HHAs to broader community engagement and coordination. HHAs are responsible for ensuring and documenting that their participation in HERC exercises meets the requirements expected by CMS.

The following tools and templates are included:

- Exercise Design Checklist
- Exercise Evaluation Guide
- After Action Report/Improvement Plan Instructions and Template

*Effective 11/29/2019
**Tools and Templates: Training and Testing**

This section contains tools, templates, and resources that may be helpful for training and testing:

*Exercise Design Checklist*

*Exercise Evaluation Guide*

*After Action Report/Improvement Plan Instructions and Template*

*Effective 11/29/2019*
**Exercise Design Checklist**
The Exercise Design Checklist document (linked below) provides a sample checklist for designing exercises. The document leads users through the necessary steps for exercise design and can be used to document the planning and development of exercises. The first section of the checklist includes consideration of the type of exercise, the exercise scenario, the main objectives (target capabilities/critical areas) to be evaluated during the exercise, the levels of activity to be included in the exercise, who will participate in the exercise, which organizations/agencies will be involved in the exercise, and when the exercise will occur. The second section of the checklist includes consideration of communications, resources, safety and security, staff roles and responsibilities, utilities, and patient care. The following sections guide exercise designers through identifying players’ expected actions, developing a purpose statement, writing the narrative for the exercise, identifying major and detailed events in chronological order, and completing the after action report and improvement plan.

https://www.dhs.wisconsin.gov/library/exercise-design-checklist.htm

**Exercise Evaluation Guide**
The Exercise Evaluation Guide (linked below) is a blank document. The content and layout can be amended as is appropriate, but it is designed to help HHAs assess their exercises. The guide includes areas for evaluating numerous activities included in a single exercise. Expected observations can be entered ahead of time. After the exercise, evaluators can assess whether expectations were observed and the extent to which expectations were completed or met. HHAs can complete this exercise evaluation guide as part of their AAR, to assess areas of strength and weakness.

**After Action Report/Improvement Plan Instructions and Template**
After Action Reports and Improvement Plans (IPs) are important parts of emergency preparedness testing. AARs help agencies assess their response to emergency events, whether simulated during an exercise, or real-world. AARs review the exercise design and execution, and provide an assessment of what went well and what needs to be improved upon. IPs specifically outline how and when improvements will be made to address shortcomings identified by the exercise evaluation and AAR.

The CMS AAR/IP instructions document walks through developing an AAR and IP. The document includes a purpose statement and background information on emergency preparedness. Additionally, the document contains explanations of key terms and important capabilities. It is important to note that this AAR/IP instruction document is based on the U.S. Department of Homeland Security Exercise and Evaluation Program (HSEEP). Though HHAs may choose to use HSEEP to meet exercise requirements for the CMS rule, it is essential to understand that the expectations for HSEEP and the CMS rule are not the same in regard to emergency preparedness testing. HHAs should always ensure that their exercises and other testing activities meet the requirements of the CMS rule.
The CMS AAR/IP template document can be used to complete an AAR and IP. The document contains blank sections with instructions on how to fill out essential components in italics. The template covers the executive summary, exercise overview, exercise design summary, improvement plan, and conclusion. The template also contains five appendices: acronyms, lessons learned (optional), participant feedback summary (optional), exercise events synopsis (optional), and exercise events summary table (optional). HHAs may use, modify, and customize this document as is appropriate for their facility. However, if an HHA wishes to conduct an exercise compliant with the Hospital Preparedness Program (HPP) and HSEEP requirements, the template sections must not be modified and each section (excluding those marked optional) must be completed entirely. HHAs wishing to ensure compliance with the HPP and HSEEP should assess whether their testing program meets the CMS rule requirements. If HHAs determine they are not meeting conditions of participation with this template as is, they may consider completing a second AAR/IP that is compliant with the CMS regulations.

ADDITIONAL REQUIREMENTS

Integrated Health Care Systems
If an HHA is part of a health care system consisting of multiple separately certified health care facilities that elects to have a unified and integrated emergency preparedness program, the HHA may choose to participate in the health care system’s coordinated emergency preparedness program. If elected, the unified and integrated emergency preparedness program should:

- Demonstrate that each separately certified facility within the system actively participated in the development of the unified and integrated emergency preparedness program.
- Be developed and maintained in a manner that takes into account each separately certified facility’s unique circumstances, patient populations, and services offered.
- Demonstrate that each separately certified facility is capable of actively using the unified and integrated emergency preparedness program and is in compliance with the program.
- Include a unified and integrated emergency plan that meets all aforementioned requirements. The unified and integrated emergency plan should also be based on and include the following:
  - A documented community-based risk assessment, utilizing an all-hazards approach.
  - A documented individual facility-based risk assessment for each separately certified facility within the health system, utilizing an all-hazards approach.
- Include integrated policies and procedures, a coordinated communication plan, and training and testing programs that meet the aforementioned requirements.

The health care system’s unified emergency preparedness program should be updated each time an agency leaves or enters the health care system’s program. The integrated program should demonstrate that each separately certified facility included in the program actively participated in the program’s development, and each facility should designate personnel to collaborate with the health care system to develop the plan. This participation should be documented. All components of the emergency preparedness program that are reviewed annually should include all participating agencies and facilities, and each facility should be able to prove that it was involved in annual reviews and updates.

DEFINITIONS

*Effective 11/29/2019
These definitions reflect those provided by CMS in the Interpretive Guidance for the Emergency Preparedness regulation.

**All-Hazards Approach**
An all-hazards approach is an integrated approach to emergency preparedness that focuses on identifying hazards and developing emergency preparedness capacities and capabilities that can address those as well as a wide spectrum of emergencies or disasters. This approach includes preparedness for natural, man-made, and or facility emergencies that may include but is not limited to: care-related emergencies; equipment and power failures; interruptions in communications, including cyber attacks; loss of a portion or all of a facility; and interruptions in the normal supply of essentials, such as water and food. All agencies must develop an all-hazards emergency preparedness program and plan.

**Disaster**
A hazard impact causing adverse physical, social, psychological, economic, or political effects that challenge the ability to respond rapidly and effectively. Despite a stepped-up capacity and capability (call-back procedures, mutual aid, etc.) and change from routine management methods to an incident command/management process, the outcome is lower than expected compared with a smaller scale or lower magnitude impact (see “emergency” for important contrast between the two terms).

**Emergency**
A hazard impact causing adverse physical, social, psychological, economic, or political effects that challenge the ability to respond rapidly and effectively. It requires a stepped-up capacity and capability (call-back procedures, mutual aid, etc.) to meet the expected outcome and commonly requires change from routine management methods to an incident command process to achieve the expected outcome (see “disaster” for important contrast between the two terms).

**Emergency/Disaster**
An event that can affect the agency internally as well as the overall target population or the community at large or community or a geographic area.

**Emergency Plan**
An emergency plan provides the framework for the emergency preparedness program. The emergency plan is developed based on facility- and community-based risk assessments that assist an agency in anticipating and addressing agency, patient, staff, and community needs and support continuity of business operations.

**Emergency Preparedness Program**
The Emergency Preparedness Program describes an agency's comprehensive approach to meeting the health, safety and security needs of the agency, its staff, their patient population, and community prior to, during, and
after an emergency or disaster. The program encompasses four core elements: an emergency plan that is based on a risk assessment and incorporates an all-hazards approach; policies and procedures; communication plan; and the training and testing program.

**Facility-Based**
We consider the term “facility-based” to mean the emergency preparedness program is specific to the agency. It includes but is not limited to hazards specific to an agency based on its geographic location; dependent patient/resident/client and community population, facility type, and potential surrounding community assets, i.e., rural area versus a large metropolitan area.

**Full-Scale Exercise**
A full scale exercise is an operations-based exercise that typically involves multiple agencies, jurisdictions, and disciplines performing functional (for example, joint field office, emergency operation centers) and integration of operational elements involved in the response to a disaster event, i.e., “boots on the ground” response activities (for example, hospital staff treating mock patients).

**Risk Assessment**
The term risk assessment describes a process agencies use to assess and document potential hazards that are likely to impact their geographical region, community, facility, and patient population and identify gaps and challenges that should be considered and addressed in developing the emergency preparedness program. The term risk assessment is meant to be comprehensive and may include a variety of methods to assess and document potential hazards and their impacts. The health care industry has also referred to risk assessments as a hazard vulnerability assessment or analysis (HVA) as a type of risk assessment commonly used in the health care industry.

**Staff**
The term "staff" refers to all individuals that are employed directly by an agency. The phrase "individuals providing services under arrangement" means services furnished under arrangement that are subject to a written contract conforming with the requirements specified in section 1861(w) of the Act.

**Table-top Exercise (TTX)**
A tabletop exercise involves key personnel discussing simulated scenarios in an informal setting. TTXs can be used to assess plans, policies, and procedures. A tabletop exercise is a discussion-based exercise that involves senior staff, elected or appointed officials, and other key decision-making personnel in a group discussion centered on a hypothetical scenario. TTXs can be used to assess plans, policies, and procedures without deploying resources.
