Communicable Disease Case Reporting and Investigation Protocol

GROUP A STREPTOCOCCUS (GAS), INVASIVE DISEASE

(Streptococcus pyogenes)

I. IDENTIFICATION AND DEFINITION OF CASES

A. Clinical Description: A severe and sometimes life-threatening disease caused by the bacterium Streptococcus pyogenes (group A Streptococcus). Invasive GAS disease is associated with many different syndromes, such as pneumonia or bacteremia in association with cutaneous infection (e.g., cellulitis, infection of a surgical or nonsurgical wound) or deep soft-tissue infection (e.g., necrotizing fasciitis or myositis). It can also cause meningitis, peritonitis, osteomyelitis, septic arthritis, postpartum sepsis (i.e., puerperal fever), neonatal sepsis, and non-focal bacteremia.

B. Laboratory Criteria: A laboratory confirmed infection is defined by isolation of group A Streptococcus (Streptococcus pyogenes) from a normally sterile site (e.g., cerebrospinal fluid [CSF], blood, joint, pleural, pericardial fluid, or another normally sterile site).

Note: Isolation from urine, sputum, abscesses, or pharyngeal swabs does not meet the case definition.

C. Wisconsin Surveillance Case Definition: Confirmed—A clinically compatible case that is laboratory confirmed.

II. REPORTING

A. Wisconsin Disease Surveillance Category II – Methods for Reporting: This disease shall be reported to the patient’s local health officer or to the local health officer’s designee within 72 hours of recognition of a case or suspected case, per Wis. Admin. Code § DHS 145.04 (3)(b). Report electronically through the Wisconsin Electronic Disease Surveillance System (WEDSS), or mail or fax a completed Acute and Communicable Disease Case Report (F-44151) to the address on the form.

B. Responsibility for Reporting: According to Wis. Admin. Code § DHS 145.04(1), persons licensed under Wis. Stat. ch. 441 or 448, laboratories, health care facilities, teachers, principals, or nurses serving a school or day care center, and any person who knows or suspects that a person has a communicable disease identified in Appendix A.

C. Clinical Criteria for Reporting: Clinically compatible illness.

D. Laboratory Criteria for Reporting: Isolation of group A Streptococcus (Streptococcus pyogenes) from a normally sterile site (e.g., cerebrospinal fluid [CSF], blood, joint, pleural, pericardial fluid, or another normally sterile site). Isolation from urine, sputum, abscesses, or pharyngeal swabs does not meet the case definition.

III. CASE INVESTIGATION

A. Responsibility for case investigation: It is the responsibility of the local health department (LHD) to investigate or arrange for investigation of suspected or confirmed cases as soon as is reasonably possible. A case investigation may include information collected by phone, in person, in writing, or through review of medical records or communicable disease report forms, as necessary and appropriate.

B. Required Documentation:

1. Complete the WEDSS disease incident investigation report, including appropriate, disease-specific tabs (e.g., WEDSS Lab Clinical Tab, “Invasive bacteria - Specimen summary” section).
2. Upon completion of investigation, set WEDSS disease incident process status to “Final.”

C. Additional Investigation Responsibilities

1. Determine whether the case is potentially outbreak-related and notify the Wisconsin Division of Public Health (DPH), Bureau of Communicable Diseases (BCD).
IV. PUBLIC HEALTH INTERVENTIONS AND PREVENTION MEASURES
