

# Breathe Easily

Take action to protect yourself and your family from common indoor air pollutants.

- 1 Radon:** Test your home for radon. If levels are too high, certified contractors can install a mitigation system to prevent radon from entering your home.
- 2 Vapor Intrusion:** Harmful vapors from past chemical spills can enter your home. There are ways to fix a vapor intrusion issue, including the installation of a mitigation system.
- 3 Mold:** Immediately fix water leaks. Keep areas clean and dry to prevent indoor mold growth.
- 4 Carbon Monoxide:** Avoid exposure to carbon monoxide. Place a carbon monoxide detector on each floor of your home. Replace the batteries twice a year.
- 5 Tobacco Smoke:** Do not smoke indoors. Children who breathe secondhand smoke are more likely to have lung problems, including severe asthma.
