I live with someone who was never sick, but was diagnosed with COVID-19

Are you able to have complete* separation from the diagnosed person in your home?

No

Released from quarantine: 14 days** after the diagnosed person completes a 10-day isolation

Yes

Released from quarantine: 14 days** after your last contact with the diagnosed person

*Complete separation means no contact, no time together in the same room, no sharing of any spaces, such as using the same bathroom.
If you get sick, ask your doctor to be tested and please follow the guidance in “Next Steps: while you wait for your COVID-19 test results?”

**A 14-day quarantine remains the safest option if you are a close contact of someone who has COVID-19. Quarantine may be shortened to 10 days, provided people still monitor for symptoms for the full 14 days. Quarantine may be shortened further to 7 days if a person receives a negative test result (PCR or antigen) that was collected on day 6 or 7.

If you have been fully vaccinated against COVID-19, meaning it has been at least two weeks since you received your last dose in the vaccine series, and were in close contact with someone with COVID-19, you do not have to quarantine. However, you should:

- Get tested 5-7 days after close contact with someone with COVID-19, even if you don’t have symptoms.
- Wear a mask in public indoor spaces for 14 days after exposure or until you receive a negative COVID-19 test result.
- Monitor for symptoms for 14 days after your last close contact
- Isolate at home if you develop symptoms or test positive for COVID-19.
