Antigen tests are a common type of COVID-19 test that provides rapid results in about 15 minutes. While antigen tests deliver fast results, they are not as accurate as other tests. This makes them best suited for patients with symptoms or exposure where the virus is more easily detected. A second test of a different type is sometimes necessary to confirm the antigen test result and should be conducted as soon after the antigen test as possible (always within 48 hours).

For more information on COVID-19 testing in Wisconsin, visit: [www.dhs.wisconsin.gov/testing](http://www.dhs.wisconsin.gov/testing)

*If you are fully vaccinated, you do not need to quarantine but you should wear a mask in public indoor spaces for 14 days or until you receive a negative test result. For more information on next steps after exposure, visit: [www.dhs.wisconsin.gov/covid-19/close-contacts.htm](http://www.dhs.wisconsin.gov/covid-19/close-contacts.htm)
