COVID-19 Antigen Testing: Community Guidance

Antigen tests are a type of viral COVID-19 test that provide rapid results. Many self-tests, but not all, are antigen tests. You can use an antigen test regardless of vaccination status or if you have symptoms. Molecular tests, such as a PCR test, may provide more accurate results. Use the chart below to determine your next steps after taking an antigen test. Remember, if you were exposed to someone with COVID-19 and are not up-to-date with your COVID-19 vaccines, quarantine for at least 5 days after exposure. Learn more about staying up to date, [https://www.dhs.wisconsin.gov/covid-19/vaccine-booster.htm](https://www.dhs.wisconsin.gov/covid-19/vaccine-booster.htm).

---

### I do NOT have symptoms of COVID-19

- **Negative Antigen Test Result**
  - **Close Contact?**
    - Yes
      - **Up to date on vaccines?**
        - Yes
          - You likely do not have COVID-19 and do not need to isolate.
        - No
          - Quarantine for at least 5 days after last being exposed to COVID-19. Continue to wear a well-fitting mask through day 10.
    - No
      - If you have symptoms, take an antigen test.

---

### I have symptoms of COVID-19.

- **Positive Antigen Test Result**
  - **Confirmatory Molecular or Antigen Test**
    - Positive
      - Quarantine for at least 5 days after last being exposed to COVID-19. Continue to wear a well-fitting mask through day 10.
    - Negative
      - You likely do not have COVID-19, but should stay home until you feel better.
