

AVAILABLE COVID-19 VACCINES

There are currently three COVID-19 vaccines available in the United States and other COVID-19 vaccines are in development.

VACCINE TYPE AND DOSAGE

Pfizer

Authorized for people age 12 and older.

Type: mRNA Dose: 2 doses 21 days apart

Moderna

Authorized for people age 18 and older.

Type: mRNA Dose: 2 doses 28 days apart

Johnson & Johnson

Authorized for people age 18 and older.

Type: Viral vector Dose: 1 dose

All available vaccines help enhance our immune systems so that when we are exposed to COVID-19, we are ready to fight it.

All available vaccines provide protection against severe illness, hospitalization, and death caused by COVID-19.

Experts expect that all available vaccines effectively reduce the risk of COVID-19 for all of the circulating variants.

If you are vaccinated, you have a far lower risk of getting severely sick, being hospitalized, or dying from COVID-19, no matter which vaccine you get.

HOW DO WE KNOW COVID-19 VACCINES ARE SAFE AND WORK?

COVID-19 vaccines are approved for use under emergency use authorization (EUA) and were tested in large clinical trials to make sure they meet well established safety standards. Thousands of people were recruited to participate in these trials to see how the vaccines offer protection to people of different ages, races, and ethnicities, as well as those with different medical conditions.

The Food and Drug Administration (FDA), the Centers of Disease Control and Prevention (CDC), and independent advisors review all vaccine safety and efficacy data before any vaccine is authorized for use.

Like with all vaccines, after a COVID-19 vaccine is made available to the public, the FDA and CDC continue to closely monitor the vaccine for safety and effectiveness and make sure any issues are detected as quickly as possible.

PROTECT YOURSELF AND OTHERS FROM COVID-19

Not getting vaccinated leaves you and your family at risk for catching COVID-19 and getting sick. When you and others around you get vaccinated and practice good pandemic behaviors, we move closer to getting **back to normal**. **Getting vaccinated will keep you, your family, and your community safe and healthy.**

You are considered **fully vaccinated** against COVID-19 if it has been two or more weeks since you got your second dose of a two-dose vaccine (such as Pfizer or Moderna), or one dose of a single-dose vaccine (such as Johnson & Johnson).

Once you're fully vaccinated, you can feel safer doing the things you love. In outdoor settings and indoor settings in areas of low or moderate community transmission, if you are fully vaccinated, you can feel safer engaging in social situations without wearing a mask or practicing physical distancing.
