

DHS Groundwater and Drinking Water Program

Our goal is to protect public health by promoting access to safe drinking water for all Wisconsinites.

Groundwater Standards Development

- We recommend standards for substances that can impact our health.
- We develop these recommendations based on guidelines in state law.

Toxicology and Risk Assessment

- We keep informed on the health effects of substances of concern.
- We look at the health risks related to drinking water that contains harmful substances.

Liaison for Drinking water and Groundwater

- We communicate health-related information to the public.
- We work with partners on groundwater and drinking water issues.

Outreach and Education

- We develop and share resources on health-related groundwater and drinking water issues.
- We give presentations on the health effects of substances in drinking water to our partners and the public.
