What does it mean to be fully vaccinated?

You are considered fully vaccinated against COVID-19 if:

- It has been two or more weeks since you got your second dose of a two-dose vaccine such as Pfizer or Moderna; or
- It has been two or more weeks since you got one dose of a single-dose vaccine such as Johnson & Johnson.

What can I do if I'm fully vaccinated?

Once you're fully vaccinated, you can feel safer doing the things you love. In outdoor settings and indoor settings in areas of low or moderate community transmission, if you are fully vaccinated, you can feel safer engaging in social situations without wearing a mask or practicing physical distancing.

Masks should still be worn in:

- Areas with substantial to high community transmission
- Health care settings
- K-12 schools, including school buses
- Public transportation
- Correctional facilities
- Homeless shelters
- Other settings where regulations still exist

Learn more about when you should wear a mask after you are fully vaccinated at: www.dhs.wisconsin.gov/covid-19/vaccine-after.htm.
Do I need to quarantine or get tested if I'm fully vaccinated?

If you have been fully vaccinated against COVID-19, meaning it has been at least two weeks since you received your last dose in the vaccine series, and you were in close contact with someone with COVID-19, you do not have to quarantine. However, you should:

- Get tested 3-5 days after close contact with someone with COVID-19, even if you don’t have symptoms.
- Wear a mask in public indoor spaces for 14 days after exposure or until you receive a negative COVID-19 test result.
- Monitor for symptoms for 14 days after your last close contact.
- Isolate at home if you develop symptoms or test positive for COVID-19.

Stopping the spread of COVID-19 requires all the tools available. Together, vaccination and important public health practices offer the best protection from COVID-19.
