

HOW TO ADMINISTER NASAL NALOXONE

911

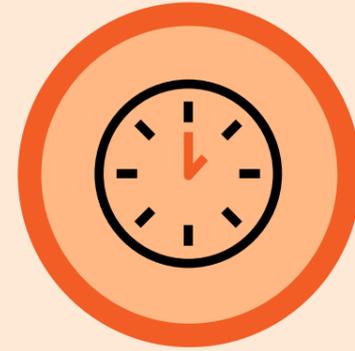

Call **911** and follow the operator's instructions. Give rescue breaths, if needed. Continue breaths every 5-6 seconds.

Place tip of naloxone nozzle in either nostril until your fingers touch the nose.

Press the plunger firmly to release the dose of naloxone.

If there is no response after 2-3 minutes, give a second dose. Stay with the person until help arrives.

SIGNS OF AN OPIOID OVERDOSE

-  Unresponsiveness or unconsciousness
-  Slowed or stopped breathing
-  Snoring or rattling sounds
-  Cold or clammy skin
-  Discolored lips or fingernails
