EMResource Event Response
Users can access EMResource at https://emresource.juvare.com/login

Event Types

**Mass Casualty Incident (MCI):** Used to gather the number of red, yellow, and green beds in response to an MCI. Do not use this template to announce disruptions in services your hospital provides, including computed tomography (CT) downtime.

**Bed Count:** Used in the event of a surge of patients who do not need to be evaluated in an emergency department and will be directly admitted to the receiving facility.

**General Announcement:** Used to communicate time-sensitive updates not related to any surge event. Examples include network outages, equipment failures, and critical bypass information.

**Resource Request:** Used for time-sensitive requests. For example, if your facility needs a crucial piece of equipment, such as a pediatric-capable ventilator, you could post a resource request event.

Tips

- Enter data into EMResource within 30 minutes of the initial notification.
- Follow the same process for responding to an MCI, bed counts, resource requests, and general announcements, with the exception of the status types (data) being collected.
- Monitor the event posting, and ensure your Wisconsin Interoperable System for Communications (WISCOM) radio is on with the volume turned up.
- Ensure the volume of the computer is turned up and not silenced in order to receive voice alerts.
- Allow pop-up windows for EMResource in your browser.
Notification Preferences

EMResource sends event, status change, and system notifications that are managed through the Preferences menu. Users of the system decide when and how notifications are sent, according to the type of event and their personal notification preferences. For each event type, choose to receive notifications via email, text, page, voice, or web page.

You are also given the option to select “X”, in which case the system reminds you of this event until you acknowledge receipt. If “X” is selected, the system will remind you of the event via voice alert and a notification bell in the upper right-hand corner.

If “Mute” is selected, the system will remind you of the event via voice alert in ten minutes, along with the notification bell in the upper right-hand corner.

Responding to an Active Event

1. When an event is initiated in EMResource, the system displays an event banner (see image below). Click the event title in this banner.

2. Find your hospital in the event list and select the appropriate status type (data field) to update. To view a definition of the requested information, click the status type title.
3. Select individual data fields by clicking the dashes (--) to update, or update in bulk by clicking the icon next to the facility name. Update the data fields and click "Save."
