Wisconsin CPCP supports primary care physicians, nurse practitioners, and physician assistants to manage mental health concerns in child and adolescent patients to help address the barriers to mental health care access.

Participating in WI CPCP can help you:

• Diagnose and manage mental health challenges with consultative support from child psychiatrists and psychologists.
• Enhance clinical knowledge of pediatric mental health through education and training opportunities.
• Connect families to community resources.

INCREASED QUALITY OF CARE
• Confidential consults with child psychiatrist and psychologist
• Patient remains in trusted medical home
• Linkage to local community resources

TIMELY ACCESS
• Avoid lengthy specialists’ waitlists to improve patient access
• Receive peer-to-peer phone responses within 30 minutes
• Receive peer-to-peer email responses within 24 hours

NO COST TO PARTICIPATE
• Free and easy to join
• State and federally funded
• Free Continuing Medical Education and ongoing educational opportunities

ENROLLED PRIMARY CARE PROVIDERS CAN EXPECT

PHONE RESPONSES RETURNED WITHIN 30 MINUTES
EMAIL RESPONSES RETURNED WITHIN 24 HOURS

Medical Directors, Administrators, and Clinic Managers
Are you looking for mental and behavioral health management support for your primary care clinicians?

Integrating WI CPCP can:
• Increase quality of care to your child and adolescent population
• Improve timely access to clinical experts
• Promote health care savings
• Foster provider confidence in management of child and adolescent mental health issues

“WI CPCP clinicians are so personable, knowledgeable and thorough. They take the time to always get the full history and discuss different medication options, side effects, and timing of discontinuing one medication and starting a new one. With the availability of WI CPCP, I have been able to avoid many emergency room visits and inpatient hospitalizations for my patients. If seeing a psychiatrist is necessary, I have been able to offer my patients a plan of care until they can be seen by a psychiatrist.”

**PRIMARY CARE PROVIDER SATISFACTION**

99% of providers believe WI CPCP consultations have helped to more effectively manage patient care. 98% of providers report satisfaction with their WI CPCP educational experiences. 98% of providers report satisfaction with the linkage support received for community-based resources provided by WI CPCP.

The goal of the Wisconsin Child Psychiatry Consultation Program (WI CPCP) is to improve mental health care for children in the state of Wisconsin by providing education, consultative support, and resource support from child psychiatrists, pediatric psychologists, and resource personnel. With this support, primary care providers are able to offer timely, quality mental health care to children and adolescents with mild-to-moderate mental and behavioral health concerns.

**CUMULATIVE DATA**

1,764 Participating primary care providers 6,768 Total consultations since program inception

Ages served

- 0–5 yrs.
- 6–10 yrs.
- 11–15 yrs.
