

JYNNEOS (Monkeypox) Vaccinator Readiness Checklist

Required Items

All vaccinators ordering, handling, and/or administering JYNNEOS vaccine received through the Wisconsin Department of Health Services (DHS), including the primary and back up contacts, must review and understand the following **required** information and guidelines. Guidance is subject to change due to evolving nature of the response; this information is current as of August 3, 2022.

Clinical Protocols and Administration Requirements

- Review the Centers for Disease Control and Prevention (CDC)'s [Monkeypox and Smallpox Vaccine Guidance](#) and [Considerations for Monkeypox Vaccination](#)
- Review the Advisory Committee on Immunization Practices' (ACIP) [June 3, 2022 Morbidity and Mortality Weekly Report on the JYNNEOS Vaccine](#)
- Review [WI DPH JYNNEOS Fact Sheet](#) and "[Dear Provider Letter](#)"
- Review the [Patient Screening Checklist](#) and the [Vaccine Management Best Practices](#)
- Review CDC's [Reducing Stigma in Monkeypox Communication](#) document
- Every patient must be given a [JYNNEOS Vaccine Information Statement](#) prior to receipt of JYNNEOS vaccine
- Create and implement a process to ensure patients will be able to receive their 2nd dose
- Adverse events should be reported to [VAERS](#)

Vaccine Storage and Handling Requirements

- Review [CDC's Storage and Handling Toolkit](#).
- Ensure clinic has a backup plan to store and handle vaccine in case of emergency for power outages and other problems that can put vaccine at risk. Follow the outline provided in Section 7 of [CDC's Storage and Handling Toolkit](#)
- Review storage and handling requirements and emergency backup plan with all staff
- Ensure you have a refrigerator and/or a freezer for vaccine storage
 - o Note: If using a combination household unit, providers should only use the refrigerator compartment to store vaccines. A separate stand-alone freezer should then be used to store frozen vaccines. **Use of the freezer compartment of a household combination unit is discouraged.**
 - o Dorm-style refrigerators/freezer **cannot** be used for vaccine storage.
- A Digital Data Logger to monitor storage unit temperatures is required
- Do not use the vaccine after the expiration date

- o Note the expiration date is not shown on the individual vial
 - o You can validate the expiration dates on the [HHS](#) website
- Protect vaccine from light using either original packaging or the amber-colored bag that is included with the vaccine.
- Record the NDC, expiration date, and vaccine lot number and keep with the amber-colored bag.
- Understand that vaccine cannot be redistributed or returned to the hubs

Wisconsin Immunization Registry (WIR) Requirements

- All providers must enter each administered dose into WIR within 24 hours of administration
- Maintain accurate JYNNEOS vaccine inventory in WIR
- Document and report vaccine wastage in WIR daily
