Disease Reporting Categories

Category I: Category I diseases are urgent public health matters and should be reported by telephone to the patient's local health officer or to the local health officer's designee upon identification of a case or suspected case. In addition to the immediate report, complete and fax, mail, or electronically report an [Acute and Communicable Diseases Case Report](#) to the address on the form, or enter the data into the Wisconsin Electronic Disease Surveillance System within 24 hours. Public health intervention is expected as indicated.

Category II: Category II diseases should be reported by fax, mail, or electronic reporting to the patient's local health officer or to the local health officer's designee on an [Acute and Communicable Disease Case Report](#) or by other means or by entering the data into the Wisconsin Electronic Disease Surveillance System within 72 hours of the identification of a case or suspected case.

Category III: Category III diseases should be reported to the state epidemiologist on a [Wisconsin Human Immunodeficiency Virus \(HIV\) Infection Case Report Form](#) and fax, mail, or call within 72 hours after identification of a known or suspected case. Additionally, the following laboratory results shall be reported on all persons newly or previously diagnosed with HIV infection each time the test is conducted: all CD4+ test results (CD4+ T-lymphocyte counts and percentages), both detectable and undetectable HIV viral load results, HIV genotypic results, and all components of the HIV laboratory diagnostic testing algorithm when the initial screening test is reactive. For more information about HIV reporting, please refer to the [Wisconsin HIV reporting fact sheet](#). For any questions about HIV case surveillance and reporting, please [contact the HIV Program](#); the secure fax is 608-266-1288.

Category I Diseases

Anthrax	Poliovirus infection (paralytic or nonparalytic)
Botulism (<i>Clostridium botulinum</i>) (including foodborne, infant, wound, and other)	Primary Amebic Meningoencephalitis (PAM) (<i>Naegleria fowleri</i>)
Cholera (<i>Vibrio cholera</i>)	Rabies (human, animal)
Diphtheria (<i>Corynebacterium diphtheria</i>)	Ricin toxin
<i>Haemophilus influenzae</i> invasive disease , (including epiglottitis)	Rubella
Hantavirus infection	Rubella (congenital syndrome)
Hepatitis A	Severe Acute Respiratory Syndrome-associated Coronavirus (SARS-CoV)
Measles (rubeola)	Smallpox
Meningococcal disease (<i>Neisseria meningitidis</i>)	Tuberculosis
Middle Eastern Respiratory Syndrome-associated Coronavirus (MERS-CoV)	Viral Hemorrhagic Fever (VHF) (including Crimean-Congo, Ebola, Lassa, Lujo, and Marburg viruses, and New World Arenaviruses)
Monkeypox	Yellow fever
Pertussis (whooping cough, caused by any <i>Bordetella</i> infection)	Outbreaks, confirmed or suspected:
Plague (<i>Yersinia pestis</i>)	Foodborne or waterborne
	Occupationally-related diseases
	Other acute illnesses

Category II Diseases

Anaplasmosis	Carbapenemase-producing carbapenem-resistant <i>Pseudomonas aeruginosa</i> (CP-CRPA)
Arboviral disease (including, but not limited to, disease caused by California serogroup, Chikungunya, Dengue, Eastern Equine Encephalitis, Powassan, St. Louis Encephalitis, West Nile, Western Equine Encephalitis, and Zika viruses)	Chancroid (<i>Haemophilus ducreyi</i>)
Babesiosis	<i>Chlamydia trachomatis</i> infection
Blastomycosis	Coccidioidomycosis (Valley Fever)
Borreliosis (other than Lyme disease which is reportable as a distinct disease)	COVID-19-Associated Pediatric Mortality
Brucellosis	COVID-19 Hospitalizations
<i>Candida auris</i>	Cryptosporidiosis (<i>Cryptosporidium</i> infection)
Campylobacteriosis (<i>Campylobacter</i> infection)	<i>Cronobacter</i>, Invasive Infection-Infant
Carbapenemase-producing carbapenem-resistant <i>Acinetobacter baumannii</i> (CP-CRAB)	Cyclosporiasis (<i>Cyclospora</i> infection)
Carbapenemase-producing carbapenem-resistant Enterobacterales (CP-CRE)	Ehrlichiosis
	Environmental and occupational lung diseases (including asbestosis, silicosis, and chemical pneumonitis , and occupational lung diseases caused by bio-dusts and bio-aerosols)

Category II Diseases Continued

<i>E. coli</i> infection , caused by Shiga toxin-producing <i>E. coli</i> (STEC)	Rheumatic fever (newly diagnosed and meeting the Jones criteria)
<i>E. coli</i> infection caused by enteropathogenic (EPEC), enteroinvasive (EIEC), or enterotoxigenic <i>E. coli</i> (ETEC)	Rickettsiosis (other than spotted fever rickettsiosis which is reportable as a distinct disease)
Free-living amebae infection (including Acanthamoeba disease (including keratitis) and Balamuthia mandrillaris disease)	RSV-Associated Pediatric Mortality
Giardiasis	RSV Hospitalizations
Gonorrhea (<i>Neisseria gonorrhoeae</i>)	Salmonellosis
Hemolytic uremic syndrome	Shigellosis (<i>Shigella infection</i>)
Hepatitis B	Spotted Fever Rickettsiosis (including Rocky Mountain spotted fever)
Hepatitis C	Streptococcal disease (all invasive disease caused by Groups A and B <i>Streptococci</i>)
Hepatitis D	Streptococcus pneumoniae invasive disease (invasive pneumococcal)
Hepatitis E	Syphilis (<i>Treponema pallidum</i>) *only approved LTHDs should enter syphilis information into WEDSS
Histoplasmosis	Tetanus
Influenza-associated hospitalization	Toxic shock syndrome
Influenza-associated pediatric death	Toxic substance related diseases:
Influenza A virus infection, novel subtypes	Blue-green algae (Cyanobacteria) and Cyanotoxin poisoning
Kawasaki disease	Carbon monoxide poisoning
Latent Tuberculosis infection (LTBI)	Infant methemoglobinemia
Legionellosis	Lead (Pb) intoxication (specify Pb levels) *Please refer to Wis. Admin. Code § DHS 181.05 for more stringent reporting timelines of blood lead tests.
Leprosy (Hansen's Disease)	Metal poisonings other than lead (Pb)
Leptospirosis	Pesticide poisonings
Listeriosis	Toxoplasmosis
Lyme disease	Transmissible spongiform encephalopathy (TSE, human)
Lymphocytic Choriomeningitis Virus (LCMV) infection	Trichinosis
Malaria (<i>Plasmodium infection</i>)	Tularemia (<i>Francisella tularensis</i>)
Meningitis, bacterial (other than <i>Haemophilus influenzae</i> , <i>meningococcal</i> or <i>streptococcal</i> , which are reportable as distinct diseases)	Typhoid fever (<i>Salmonella Typhi</i>)
Multi System Inflammatory Syndrome in Children (MIS-C)	Vancomycin-intermediate <i>Staphylococcus aureus</i> (VISA) and Vancomycin-resistant <i>Staphylococcus aureus</i> (VRSA) infection
Mumps	Varicella (chickenpox)
Mycobacterial disease (nontuberculous)	Vibriosis (non-cholera <i>Vibrio infection</i>)
Pelvic inflammatory disease	Yersiniosis
Psittacosis	Zika virus infection
Q Fever (<i>Coxiella burnetii</i>)	

Category III Diseases

Human immunodeficiency virus (HIV) infection
(AIDS has been reclassified as HIV Stage III)
