

Introducing Wisconsin's Asthma-Safe Homes Program

In-Home Asthma Education

What we do

The Wisconsin Department of Health Services' Asthma-Safe Homes Program works to improve asthma and reduce disparities for Medicaid-eligible children and pregnant adults with uncontrolled asthma. The program serves Milwaukee, Racine, Kenosha, Rock, and Brown counties.

The two-part program promotes asthma self-management and healthy living environments through:

1. In-home asthma education and home supplies.
2. Environmental services including a detailed home assessment, repairs, and remediation of trigger sources.

Participants saw a **35% reduction** in asthma-related emergency department visits and hospitalizations. They also report **better asthma control** and **fewer missed school or work days**.

Asthma-Safe Homes Program

P-03351B (01/2025)

We need you

We are seeking partners in Milwaukee, Racine, Kenosha, Rock, and Brown counties to deliver the following asthma education services:

- Outreach to health care providers, schools, and others for client referrals
- Home visits and follow-ups to provide asthma self-management education, basic home trigger assessment, and home supplies
- Referrals to environmental services for assessment and remediation services

Interested? Community-based organizations, local or Tribal health departments, or health care organizations must have:

- Capacity and financial resources to provide services.
- Culturally and linguistically appropriate services.
