Fentanyl Test Strip Instructions

Fentanyl has been found in many drugs. Always test before using!

1. What you’ll need
2. Prepare mixture
3. Test mixture
4. What to do if fentanyl is present in your sample

What you’ll need

- Drug Sample
- Scoop 10 mg
- Mixing Tin
- Water 1 teaspoon
- Fentanyl Test Strip located on other side of this panel

Instructions

4. What to do if fentanyl is present in your sample

- Don’t use the drug.
- Keep naloxone available.
- Use with others and take turns.
- Use less and go slowly. In case of an overdose, use naloxone, call 911, and provide rescue breathing until help arrives.

**Prepare mixture**

### Crystals, Pills, and Powders

1. Blend your sample.
   Before testing, make sure the drugs are well mixed. Fentanyl can clump in one part of the sample, which can give inaccurate test results if not thoroughly mixed.

2. Scoop and dilute.
   - MDMA/molly or meth: 1 scoop or bag residue + 1 teaspoon water
   - Other drugs: 5 scoops or bag residue + 1 teaspoon water

3. Stir it up. Make sure drug sample and water are well mixed.

### Injection Drug Use

1. Set aside syringe until results are ready.

2. Add 1 teaspoon water to drug residue in tin or bag.

3. Stir well.

### Blotter LSD

1. Tear or cut off a small corner of paper to test.

2. Soak corner of paper in 1 teaspoon of water for 10 minutes.

### Test mixture

1. Hold strip in mixture for 15 seconds.

2. Place strip on flat surface for 3 minutes.

3. Read results:
   - 1 red line = fentanyl detected
   - 2 red lines = no fentanyl detected
