COVID-19 vaccines are available free of charge to everyone.

If you have health insurance

Most plans cover the cost of the COVID-19 vaccine, check with your health insurance provider.

- If your plan covers the cost, find a COVID-19 provider on **vaccines.gov** or talk to your health care provider.
- If your plan does not cover the cost, you can get a vaccine for free through the **Vaccines for Children** program or the **Bridge Access Program.**

If you are 19 and older and don't have health insurance, or your insurance does not cover the cost

You can get a COVD-19 vaccine for free from a **Bridge Access Provider** (BAP).

- Find a BAP provider at **vaccines.gov**. Enter your zip code and the vaccine you are looking for, and choose "Bridge Access Program Participant."

If you are under 19 and don't have health insurance, or your insurance does not cover the cost

You can get a COVID-19 vaccine for free at a **Vaccines for Children** provider.

- VFC providers give vaccines to children under 19 at no cost if they are eligible for Medicaid, are American Indian or Alaska Native, or are uninsured or under insured. Find a VFC provider on **dhs.wisconsin.gov/immunization/vfc-provider.htm**.
    - Not all VFC locations are able to provide vaccines for people with private insurance that does not cover vaccines. Check with the VFC provider.
    - Medicaid members under age 19 may also receive a COVID-19 vaccine from a Medicaid enrolled pharmacy who does not participate in the VFC program through December 1, 2024.
