

Wisconsin EMS Services

July 1, 2025

This report describes emergency medical service (EMS) providers in Wisconsin as of July 1, 2025, presenting high level data that describe EMS providers at a general level. These descriptors give an overall picture of service providers and are not intended to provide a detailed description of all service providers in Wisconsin. All data presented in this report have been entered into the Wisconsin E-Licensing system by the service providers per state licensure requirements. There were 822 active service providers licensed in Wisconsin in July 2025. The [report on Wisconsin EMS providers as of July 1, 2024](#), is available online.

Table 1

EMS Services by License Level

EMS License Level	Number of EMS Service Licenses	Percent of Total EMS Service Licenses
Emergency medical responder (EMR)	335	40.7%
Emergency medical technician (EMT)	146	17.8%
Advanced emergency medical technician (AEMT)	78	9.5%
Intermediate	4	0.5%
Paramedic	259	31.5%
Grand total	822	100.0%

E-Licensing data change constantly as service providers enter or leave the system. The numbers above reflect the specific point in time the information was obtained for this report. Data will vary depending on the time and date requested. E-Licensing does not have the ability to reproduce data for previous points in time on demand.

Each service provider applies for a given license level. This license level corresponds with the medical care a service provider has been approved to provide patient care. The following list describes each license level:

- Emergency Medical Responder (EMR): Provides limited basic life support prior to the arrival of an ambulance.
- Emergency Medical Technician (EMT): Provides basic life support and may have the ability to transport patients.
- Advanced Emergency Medical Technician (AEMT): Provides limited advanced life support in addition to basic life support and may have the ability to transport patients.
- Intermediate: Provides limited advanced life support above that of the AEMT level and may have the ability to transport patients. Initial education for the intermediate level is no longer offered or within the National EMS Education Standards. The numbers of intermediate service providers therefore should be expected to continually decline. The service providers reflected here obtain licensure at the level prior to the change.
- Paramedic: Provides advanced life support and may have the ability to transport patients.

Service providers may also have endorsements on their licenses to allow them to provide special functions within the EMS system. The next chart is a summary of the number of endorsements held by service providers in Wisconsin.

Table 2*EMS Service Endorsement Counts*

Endorsement	Count
Critical care	81
Tactical EMS (TEMS)	55
Community EMS (CEMS)	17
Grand total	153

A critical care endorsement is available to service providers with a paramedic level license. This endorsement enables the service providers to provide additional advanced skills and monitoring of patients being transported between health care facilities.

A tactical emergency medical services (TEMS) endorsement allows the service provider to provide emergency medical care as part of a law enforcement tactical teams.

A community emergency medical services (CEMS) endorsement enables the service to provide patient care and assistance outside of the traditional EMS setting. The programs may instead provide non-emergency preventative care or connect patients with other health care or community resources. Since last year the number of CEMS licenses has increased by eight, for 17 CEMS licenses this year.

Additional information on EMS licensing, certification, and training requirements can be found in [Wisc. Admin. Code Ch. DHS 110](#).

EMS provider licenses

Primary type of service

Service providers may be licensed for different types of functions. Each service provider has a primary designation within the licensing system describing its principal function. This descriptor does not imply that the type of service listed is the only type of service the service provider is licensed to deliver but instead the primary type of service they provide.

Table 3*Service Primary Type License Counts*

Service Primary Type	Count
911 transporting service	366
911 non-transporting service	350
Other primary service type	38
Air medical service	15
TEMS unit	53
Grand total	822

Table 3 shows the different primary service types. Next to each primary type of service is the count of service providers identifying that primary type of service in the E-Licensing system. Here we can see there are 366 service providers that have *911 Transporting Service* as their primary service type, which means they respond to emergency calls for an ambulance through the 911 system. The second most frequent primary type of service is *911 Non-Transporting Service* with 350 service providers, which means they respond to emergency calls to provide care prior to the arrival of an ambulance.

EMS licenses

Organization status

Table 4
Organization Status Counts

Organization Status	Count
Non-volunteer, full time, part time	201
Combination, paid on call	305
Volunteer	316

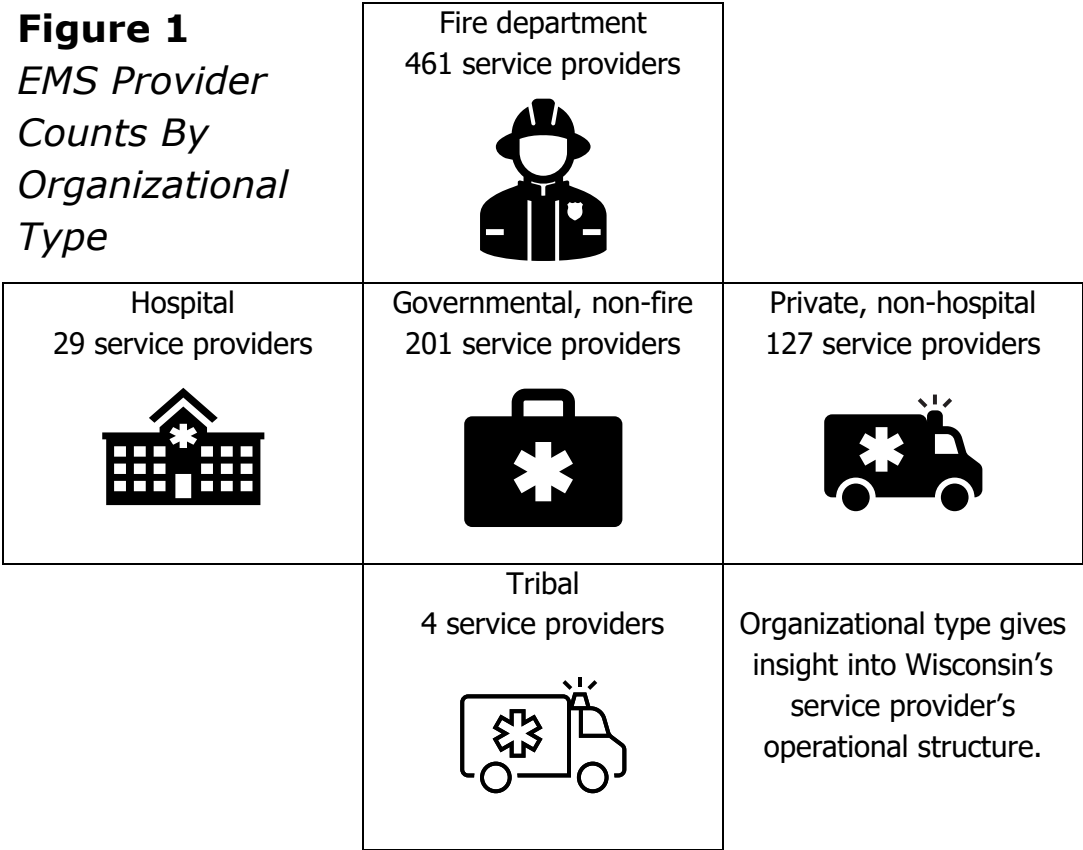

Service organization status refers to the type of employment of EMS personnel for that service provider.

Table 5
Organization Tax Status Counts

Organizational Tax Status	Count
Other (for example, government)	541
Not for profit	251
For profit	30

Organization tax status is a descriptor of the tax status of the service provider.

EMS Provider Counts By Organizational Type

EMS service licenses

Licenses per region

Emergency medical service providers may also be grouped by location based on the service's primary address.

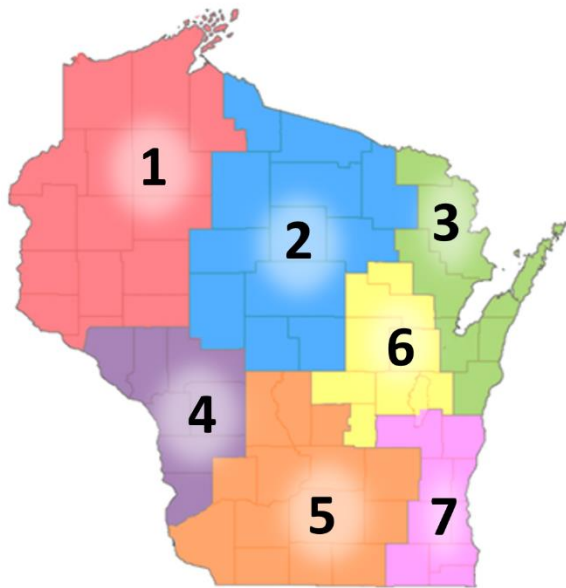

Table 6

Service provider licenses per region

Region	Count Of Service Providers
Region 1	119
Region 2	118
Region 3	80
Region 4	69
Region 5	164
Region 6	83
Region 7	170

19 service providers have a primary address that are outside Wisconsin.
