COVID-19 Vaccination in Wisconsin

2024–2025 End-of-Season Report

COVID-19 vaccines are safe and effective at reducing your risk for severe illness, hospitalization, death, and Long COVID. Getting a COVID-19 vaccine is a safer, more reliable way to build protection than getting sick with COVID-19. Protection from the COVID-19 vaccine decreases with time so staying up to date on COVID-19 vaccination gives you the best protection from currently circulating strains. The Wisconsin Department of Health Services recommends the vaccine annually for pregnant women and all residents 6 months of age and older.

Seasonal Trends Over Time

Overall COVID-19 vaccination coverage was 18.5% during the 2023–2024 respiratory season. Vaccination coverage decreased to 18.3% during 2024–2025.
