Wisconsin Department of Health and Family Services
Foreword

Since January 1, 1987, medical facilities in Wisconsin have been required to report selected information on patients who obtained induced terminations of pregnancy. Section 69.186, Wis. Stats., also mandates the Department of Health and Family Services to publish an annual demographic summary of the information reported. A copy of the statute can be found in the Appendix.

The Department of Health and Family Services produced this publication, which was prepared in the Bureau of Health Information and Policy, Division of Public Health. This annual report, *Reported Induced Terminations of Pregnancy in Wisconsin*, was formerly titled *Reported Induced Abortions in Wisconsin*.

  Induced Abortion Reporting (s. 69.186, Wisconsin Statutes) .................................................... 25
Introduction

Reported Induced Terminations of Pregnancy in Wisconsin, 2006 presents summary tables of information collected through the Wisconsin Induced Termination of Pregnancy Reporting System.

The Induced Termination of Pregnancy Report form collects only statutorily required information. Each facility that receives a supply of reporting forms is given a code number by which it is identified on the forms. That facility code and the patient number are used solely for data collection purposes, as stipulated in section 69.186, Wis. Stats. The original reporting forms are destroyed after the data set is complete. The facility code is used for purposes of information accuracy only and is deleted from the data set after editing (the patient number is never entered). These practices are required to ensure the anonymity of the patient who receives an induced termination of pregnancy; the health care provider who performs an induced termination of pregnancy; and the hospital, clinic or other facility in which a termination is performed. The cooperation of medical personnel who carry out the responsibility of reporting is acknowledged and appreciated.

The tables in this publication summarize data for calendar year 2006, trend information for the years 2002-2006, and three-year annual average information by county. The tables categorize and cross-classify reported induced terminations of pregnancy by patient characteristics that include age, educational attainment, marital status, race/ethnicity, and state and county of residence; by an estimate of gestational age; and by reported complications. The data are based on reports of induced terminations of pregnancy performed in Wisconsin for both residents and non-residents.

Data Limitations and Caveats. The accuracy of the data presented in these tables is affected by a number of factors. State and county of residence, race, ethnicity, and marital status are self-defined and reported by patients, which can affect accuracy of the characteristics measured. The education measure is defined in the reporting form as the highest grade completed; however, some patients may overlook the definitions and give the highest grade attended.

A major limitation is the unknown number of induced terminations of pregnancy obtained by Wisconsin residents in other states. This report includes only those reported induced terminations that occurred in Wisconsin and cannot provide information on all Wisconsin residents who sought and obtained terminations.

Assessing the incidence of complications is somewhat problematic. Facilities are asked to complete the reporting form during the visit in which the procedure is performed. However, some complications do not occur immediately or become apparent while the patient is in post-procedure recovery. A few providers, particularly hospitals, complete the report form at a later date using medical records. These reports are more likely to reflect later complications and they also are more likely to be for second-trimester procedures, for which there are higher risks.
Key Findings

- The number of induced terminations of pregnancy reported for Wisconsin residents in 2006 was 9,352, compared to the 9,566 reported in 2005.

- The total number of induced terminations of pregnancy reported as occurring in Wisconsin in 2006 was 9,580, down from 9,817 in 2005 (see Table 1). This is the lowest recorded number of induced terminations in Wisconsin since 1974.

- The estimated 2006 Wisconsin resident induced termination of pregnancy rate was 8 per 1,000 women age 15-44, the same as the 2005 rate. According to the U.S. Centers for Disease Control and Prevention, the national rate was 15 per 1,000 women age 15-44 in 2003; this is the most recent year for which national data are available.¹

- The estimated resident induced termination of pregnancy ratio is the number of reported induced terminations of pregnancy per 100 live births. This ratio was 14 per 100 live births in Wisconsin in 2006, the same as in 2005 (see Table 1).² The most recent national ratio was 24 per 100 live births in 2003.

- Women in the age group 20-24 accounted for the largest proportion (34 percent) of reported induced terminations of pregnancy to Wisconsin residents in 2006. Eleven percent of reports were for women 35 years of age or older. Those aged 18-19 obtained 11 percent of the reported induced terminations and those aged 15-17 obtained 6 percent (see Table 3).

- In 2006, there were 596 induced terminations of pregnancy reported for Wisconsin residents who were minors (less than 18 years of age). Written consent (usually by a parent) was provided in 530 of these; the patient was an emancipated minor in 24; and a court granted a petition to waive the parental consent requirement in 42 (see Table 4).

- By law, the adult consent requirement for a minor’s induced termination of pregnancy is waived if the pregnancy was the result of sexual assault, if the procedure was a medical emergency, or if the pregnancy was the result of sexual intercourse with a caregiver. There were no such waivers reported in 2006.

² Calculation of a true Wisconsin resident induced termination of pregnancy ratio and rate would require knowing the number of Wisconsin residents obtaining induced terminations in other states. Estimates can be made for 2006 by combining the number of reported induced terminations for Wisconsin residents obtained in Wisconsin (9,352) and in Minnesota (827 in 2005, the latest year for which figures are available) with 70,934 Wisconsin resident live births for 2005 and the estimated population of females aged 15 to 44 in Wisconsin in 2005 (1,159,932). Based on these figures, the estimated Wisconsin resident termination of pregnancy ratio in 2006 was 14 reported induced terminations per 100 live births. The 2006 estimated resident termination of pregnancy rate calculated using these figures was 9 reported induced terminations of pregnancy per 1,000 women aged 15-44.
Seventy-eight percent of reported induced terminations of pregnancy to Wisconsin residents were obtained by women who had never been married; 12 percent by currently married women; 8 percent by women who were divorced; 3 percent by women who were separated; and less than 1 percent by women who were widowed (see Table 5).

Sixty-nine percent of induced terminations of pregnancy reported for Wisconsin residents were obtained by white women, 24 percent by black women, 1 percent by American Indian women, and 4 percent by Asian/Pacific Islander women. Nine percent of terminations were obtained by Hispanic women (of any race), while 91 percent were obtained by non-Hispanic women (see Table 6).

Of the 9,352 reported induced terminations of pregnancy among Wisconsin residents in 2006, 85 percent were surgical, 15 percent were chemically induced, and 0.3 percent were surgical procedures following a failed or incomplete chemically induced termination of pregnancy. In 2005, these proportions were 86 percent, 14 percent, and 0.2 percent, respectively (see Table 10).

Fifty-two percent of reported induced terminations of pregnancy among Wisconsin residents in 2006 were obtained within the first 8 weeks of gestation (see Table 8).

* The ratio is the number of reported induced terminations of pregnancy occurring in Wisconsin per 100 Wisconsin live births. (The 2006 ratio is based on the number of live births in 2005.)

** The rate is the number of reported induced terminations of pregnancy occurring in Wisconsin per 1,000 Wisconsin women aged 15-44. (The 2006 rate is based on population estimates for July 1, 2005.)

Note: The reporting of induced terminations of pregnancy on a case basis began in Wisconsin on January 1, 1987. Before that date an annual survey was conducted of medical facilities and provided only the total number of reported induced terminations of pregnancy in the state.

* The total rate is the number of reported induced terminations of pregnancy per 1,000 Wisconsin women aged 15-44 (based on July 1, 2005 population counts); age-specific rates are the number per 1,000 women in each age group. The rate among females less than 18 years of age was calculated using the female population aged 15-17; the rate among females aged 40 and older was calculated using the female population aged 40-44.

Note: The “Wisconsin Residents” columns include only induced terminations of pregnancy that were obtained in Wisconsin by Wisconsin residents. Information about Wisconsin residents who obtained induced terminations of pregnancy in other states is not available.

Notes: The “Wisconsin Residents” columns include only induced terminations of pregnancy that were obtained in Wisconsin by Wisconsin residents. Information about Wisconsin residents who obtained induced terminations of pregnancy in other states is not available.

The data provided for what is termed “weeks of gestation” in the tables cannot be classified precisely or consistently. In some cases, it refers to the patient’s reported weeks since last menstrual period; in other cases, it is the physician’s estimate of weeks since conception. Reporting instructions ask for the number of weeks since patient’s last menstrual period. If this information is unavailable, reporters are asked to substitute a clinical estimate of gestation. It is not known which reports used which measure, nor the proportion of reports using each. A physician’s estimate of gestational age based on clinical observation is generally more reliable and may be several weeks less than the patient’s reported weeks since last menstrual period. Readers should be aware of the imprecision in the measure. The table groups the reported weeks into categories used by the U.S. Centers for Disease Control and Prevention and the Alan Guttmacher Institute.

Notes: The “Wisconsin Residents” column includes only induced terminations of pregnancy that were obtained in Wisconsin by Wisconsin residents. Information about Wisconsin residents who obtained induced terminations of pregnancy in other states is not available.

* Each induced termination of pregnancy could have more than one type of complication reported. Reporting instructions ask providers to report “any and all complications that are identified which are a result of the procedure and which occurred during the visit in which the procedure was performed. For chemically induced terminations, wait until the procedure is completed to answer this question.”

Notes: This table includes only induced terminations of pregnancy that were obtained in Wisconsin by Wisconsin residents. Information about Wisconsin residents who obtained induced terminations of pregnancy in other states is not available.

The data provided for what is termed “weeks of gestation” in the tables cannot be classified precisely or consistently. In some cases, it refers to the patient’s reported weeks since last menstrual period; in other cases, it is the physician’s estimate of weeks since conception. Reporting instructions ask for the number of weeks since patient’s last menstrual period. If this information is unavailable, the reporters are asked to substitute a clinical estimate of gestation. It is not known which reports used which measure, nor the proportion of reports using each. A physician’s estimate of gestational age based on clinical observation is generally more reliable and may be several weeks less than the patient’s reported weeks since last menstrual period. Readers should be aware of the imprecision in the measure. The table groups the reported weeks into categories used by the Centers for Disease Control and Prevention and the Alan Guttmacher Institute.

Notes: This table includes only induced terminations of pregnancy that were obtained in Wisconsin by Wisconsin residents. Information about Wisconsin residents who obtained induced terminations of pregnancy in other states is not available; therefore, the counts underestimate frequencies for some counties.

Only counties that had at least five reports for each age group are shown in this table.

* The total rate is the number of reported induced terminations of pregnancy per 1,000 women aged 15-44; age-specific rates are the number per 1,000 women in each age group. The rate among females less than 18 years of age was calculated using the female population aged 15-17; the rate among females aged 40 and older was calculated using the female population aged 40-44. Wisconsin provisional population estimates for July 1, 2005, prepared by the Bureau of Health Information and Policy, were used to calculate the 2006 rates.

Notes: This table includes only induced terminations of pregnancy that were obtained in Wisconsin by Wisconsin residents. Information about Wisconsin residents who obtained induced terminations of pregnancy in other states is not available.

* The rate is the number of induced terminations of pregnancy per 1,000 women aged 15-44. Wisconsin provisional population estimates for July 1, 2005, prepared by the Bureau of Health Information and Policy, were used to calculate the 2006 rates.

Notes: This table includes only induced terminations of pregnancy that were obtained in Wisconsin by Wisconsin residents. Information about Wisconsin residents who obtained induced terminations of pregnancy in other states is not available; therefore, the counts underestimate frequencies in some counties.

An “ns” (“not shown”) indicates there were fewer than five reports for county residents. Rates based on fewer than 20 reports are omitted because they are subject to large random fluctuations.

Notes: This table includes only induced terminations of pregnancy that were obtained in Wisconsin by Wisconsin residents. Information about Wisconsin residents who obtained induced terminations of pregnancy in other states is not available; therefore, the counts underestimate frequencies in some counties.

An “ns” (“not shown”) indicates there were fewer than five reports for county residents during the three-year period.

Notes: This table includes only induced terminations of pregnancy that were obtained in Wisconsin by Wisconsin residents. Information about Wisconsin residents who obtained induced terminations of pregnancy in other states is not available; therefore, the counts underestimate frequencies in some counties.

Counties shown had at least five reported induced terminations of pregnancy in each age group during the three-year period.

Women age 25 and older were grouped into a single category for which three-year averages could be shown.

Columns may not sum to the three-year annual average totals due to rounding.

Notes:
- This table includes only induced terminations of pregnancy that were obtained in Wisconsin by Wisconsin residents. Information about Wisconsin residents who obtained induced terminations of pregnancy in other states is not available; therefore, the counts underestimate frequencies in some counties.
- Counties shown had at least five reported induced terminations of pregnancy in each of these race and ethnic groups during the three-year period.
- Columns may not sum to the three-year annual average totals due to rounding.
- The total includes a three-year annual average of 118 reports for which patient race was reported as American Indian, and 117 for which race was reported as “Other” or “Unknown.” (These numbers are too small to present them separately by county.)
Appendix

Induced Abortion Reporting (s. 69.186, Wisconsin Statutes)

(1) On or before January 15 annually, each hospital, clinic or other facility in which an induced abortion is performed shall file with the department a report for each induced abortion performed in the hospital, clinic or other facility in the previous calendar year. Each report shall contain all of the following information with respect to each patient obtaining an induced abortion in the hospital, clinic or other facility:
   (a) The state and, if this state, the county, of residence.
   (b) Patient number.
   (c) Race.
   (d) Age.
   (e) Marital status.
   (f) Month and year in which the induced abortion was performed.
   (g) Education.
   (h) The number of weeks since the patient’s last menstrual period.
   (hm) Whether the abortion was a chemically induced abortion, a surgical abortion or a surgical abortion following a failed or incomplete chemical abortion.
   (i) Complications, if any, resulting from performance of the induced abortion.
   (j) If the patient is a minor, whether consent was provided under s. 48.375(4) (a) 1. for the abortion and, if so, the relationship of the individual providing consent to the minor; or, if consent under s. 48.375 (4) (a) 1. was not provided, on which of the bases under s. 48.375 (4) (a) 2. or (b) 1., 1g., 1m., 2. or 3. the abortion was performed.

(2) The department shall collect the information under sub. (1) in a manner which the department shall specify and which ensures the anonymity of a patient who receives an induced abortion, a health care provider who provides an induced abortion and a hospital, clinic or other facility in which an induced abortion is performed. The department shall publish annual demographic summaries of the information obtained under this section, except that the department may not disclose any information obtained under this section that reveals the identity of any patient, health care provider or hospital, clinic or other facility and shall ensure anonymity in all of the following ways:
   (a) The department may use information concerning the patient number under sub. (1)(b) or concerning the identity of a specific reporting hospital, clinic or other facility for purposes of information collection only and may not reproduce or extrapolate this information for any purpose.
   (b) The department shall immediately destroy all reports submitted under sub. (1) after information is extrapolated from the reports for use in publishing the annual demographic summary under this subsection.

In section 69.186, the term “induced abortion” means:
   The termination of a uterine pregnancy by a physician of a woman known by the physician to be pregnant, for a purpose other than to produce a live birth or to remove a dead fetus.

Enacted October 11, 1997.

Note on Statute Revision: The Induced Abortion Reporting Statute (section 69.186, Wisconsin Statutes) was revised in 1997 to add collection of data on minor patient legal status (j) and type of abortion (hm). (1998 was the first year in which these data were collected.)
